CONTENTS

HOW TO USE THIS MANUAL

To obtain maximum use from this manual it is suggested:

Read Page A COMPONENT LOCATION DIAGRAM where you find the mainboard layout diagram. Please refer to it when you configure the system.

Read about an overview of the mainboard features, packing contents, and how to upgrade as well as to change hardware configurations such as memory size, CPU type, jumper settings lists and connectors in the following categories:

>   **INTRODUCTION TO THE ATC-5200 MAINBOARD HARDWARE**
>   **INSIDE THE ATC-5200 MAINBOARD PACKAGE**
>   **Chapter 1   Introduction**
>   **Chapter 2   Installation**

When you have finished reading of both chapter 1 and chapter 2, turn to **Chapter 3 Award BIOS Setup** where you will find the update BIOS procedure and the further information which is stored in the SETUP is the system hardware configuration.

Your system dealer will set up the mainboard according to your demand of the computer. It means that the current settings of your mainboard may not be the same as the defaults shown in this user's manual. If you need to change your configuration, please ask your dealer first. Be sure this will not void your system warranty, or ask your dealer to do it for you.

The product , ATC-5200 mainboard , quick description as following :
ATC-5200 mainboard supports 100MHz host clock Super 7 processor, ie. AMD K6-2, Cyrix M II. Of course , ATC-5200 mainboard also supports 66 ~ 83.3 MHz host clock Socket 7 processor , ie. Intel Pentium & Pentium processor with MMX technology , AMD K5/K6 , Cyrix 6X86/6X86MX , and IDT Winchip.
ATC-5200 mainboard , VIA MVP3 chipset , supports AGP slot for best performance of VGA display in 3D application .

INTRODUCTION TO THE ATC-5200 MAINBOARD HARDWARE(Including easy installation)

ATC-5200 mainboard supports 100MHz host clock Super 7 processors, ie. AMD K6-2, Cyrix MII. , also with Socket 7 processor from intel , AMD , Cyrix   and IDT . The AGP slot is the second important feature for this product .

It is important to remember that you must be set **Jumper of JP1, Jumper of JP2 , Jumper of JP3, Jumper of JP4, DIP switches of SW1 and SW2** accurately, so that you can power up your system correctly.

The followings are the description of these important DIP switch & jumpers :

SW1,JP2,JP3,JP4 : The completed jumper group to setup CPU and system
frequency.

SW2,JP1 : The completed jumper group to setup CPU working
voltage.

More detailed information as following:

SW1 : This DIP switch is to setup the CPU host clock
Speed(Front Side Bus Speed) & the times of
multiple with CPU host clock, for your installing
CPU frequency.

JP3 & JP4(pair) : The jumper-pair are to select the Synchronous mode
or the Asynchronous mode , comparing with CPU host
clock and DRAM clock.

The Synchronous Mode : The speed of the DRAM
clock is same as the CPU host
clock, ie.
The CPU host clock is 100 MHz.
The DRAM clock is 100 MHz.
or,
The CPU host clock is 66 MHz.
The DRAM clock is 66 MHz.

The Asynchronous Mode : The speed of the DRAM
clock is not same as the CPU host
clock, ie.
The CPU host clock is 100 MHz.
The DRAM clock is 66 MHz.

JP2 : This jumper is to setup the frequency-ratio comparing

with the PCI clock and the CPU host clock.

Set to Pin 2-3 :The ratio is 2 : 1 , ie.

The CPU host clock is 66MHz.

The PCI clock is 33 MHz.

Set to Pin 1-2 :The ratio is 3 : 1 , ie.

The CPU host clock is 100 MHz.

The PCI clock is 33 MHz.

SW2 : The Vcore, CPU core voltage selection, ranging from

2.2V, 2.8V, 2.9V, 3.2V, 3.3V and 3.5V.

JP1 : The selection of the Single voltage for CPU(P54C

compatible) or the Dual voltage for CPU(P55C

compatible).

3-5, 4-6 close : the single voltage support

1-3, 2-4 close : the dual voltage support

The following DIP switches & Jumpers charts are the effective information for you to setup correct CPU and total system speed , when installing your system with ATC-5200 mainboard :

SW1 & JP2 setting

(The setting for CPU host clock , Times of multiple clock & PCI clock ratio)

SW1	SW1-1	SW1-2	SW1-3	JP2	SW1	SW1-4	SW1-5	SW1-6
66	OFF	OFF	OFF	2-3*	2.0X	ON	OFF	OFF
68.5	ON	ON	ON	2-3*	2.5X	ON	ON	OFF
75	OFF	ON	OFF	2-3*	3.0X	OFF	ON	OFF
83.5	ON	ON	OFF	1-2**	1.5X;3.5X	OFF	OFF	OFF
95	ON	OFF	ON	1-2**	4.0X	ON	OFF	ON
100	OFF	OFF	ON	1-2**	4.5X	ON	ON	ON
					5.0X	OFF	ON	ON
					5.5X	OFF	OFF	ON

*   Set JP2 to Pin 2-3 : the PCI clock ratio is 1 : 2 , it means :

If the CPU host clock is lower than 75 MHz,

it Is recommend to setup as 1 : 2 .

**   Set JP2 to Pin 1-2 : the PCI clock ratio is 1 : 3 , it means :

If the CPU host clock is higher than 83.3 MHz,

it is recommend to setup as 1 : 3 .

JP3 & JP4 Setting

DRAM_CLK	JP 3	JP 4
ASYNC.*	Pin 1-2	Pin 2-3
SYNC.**	Pin 2-3	Pin 1-2

* ASYNC. mode   : When the CPU host clock is 100 MHz , and the DRAM clock is 66 MHz .

** SYNC. mode   : 1. When the CPU host clock is 100 MHz , and the SDRAM clock is followed PC-100 specification .

2. When the CPU host clock is 60 ~ 83.3 MHz , and the DRAM/SDRAM clock is not PC-100 spec. .

SW 2 Setting

Vcore	SW2-1	SW2-2	SW2-3	SW2-4
2.2V	OFF	ON	OFF	OFF
2.7V	ON	ON	ON	OFF
2.8V	OFF	OFF	OFF	ON
2.9V	ON	OFF	OFF	ON
3.2V	OFF	OFF	ON	ON
3.3V	ON	OFF	ON	ON
3.5V	ON	ON	ON	ON

JP1 setting

(The setting for Single/Dual Voltage supporting for Pentium level Processor)

Mode	JP1	
Single Voltage Mode(Vcore = Vi/o)*	3-5 close	4-6 close
Dual Voltage Mode(Vcore ≠ Vi/o)**	1-3 close	2-4 close

* P54C mode (Single Voltage Mode)   : supports for intel Pentium, AMD-K5,Cyrix 6X86, IDT Win Chip C6.

** P55C mode (Dual Voltage Mode)   : supports for intel Pentium MMX, AMD-K6, AMD-K6-2, Cyrix 6X86L, Cyrix 6X86MX, Cyrix M II.

The following two examples will show you how to set JP1, JP2, JP3, JP4, DIP switches of SW1 & SW2 for most often usage CPU type .

The first example is for Intel Pentium® MMX 233 MHz processor.

The second example is for AMD-K6-2® 300 MHz (100 MHz host clock * 3) processor.

Example 1

Intel Pentium™ MMX 233MHz

	JP 3	JP 4
Synchronous (CPU host clock & DRAM clock are the same speed)	Pin 2-3	Pin 1-2

CPU HOST CLOCK / PCI CLOCK	JP 2
66MHz/33MHz	Pin 2-3

SW2 (2.8V)

INTERNAL CPU CLOCK	SW1	Ext.x Frq.
233MHz		66 x 3.5

Mode	JP1	
Dual Voltage Mode(Vcore ≠Vi/o)**	1-3 close	2-4 close

Example 2

AMD-K6-2® 300MHz

	JP 3	JP 4
Synchronous (CPU host clock & DRAM clock are same) *	Pin 2-3	Pin 1-2
Asynchronous (CPU host clock & DRAM clock are different) **	Pin 1-2	Pin 2-3

* Synchronous mode : The SDRAM module follows PC-100 spec.

** Asynchronous mode: The DRAM/SDRAM module isn't PC-100 spec.

CPU HOST CLOCK / PCI CLOCK	JP 2
100MHz/33MHz	Pin 1-2

SW2 (2.2V)
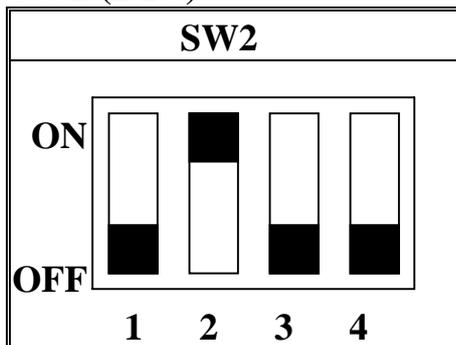

INTERNAL CPU CLOCK	SW1	Ext.x Frq.
300MHz		100 x 3.0

Mode	JP1	
Dual Voltage Mode(Vcore ≠Vi/o)**	1-3 close	2-4 close

ATC-5200 mainboard supports 100MHz host clock Super 7 processors, ie. AMD K6-2, Cyrix MII. , also with Socket 7 processor from intel , AMD , Cyrix   and IDT . The AGP slot is the second important feature for this product .

Each ATC-5200 mainboard supports or contains the following components:

- Supports Intel Pentium$^®$ (P54C) CPU operating from 75MHz to 233MHz, Intel Pentium MMX^{TM} 166~233MHz (P55C), AMD K5, AMD K6, AMD K6-2 Cyrix 6x86MX^{TM}, MII, 6x86L.

- VIA @ VT82C598MVP & VT82C586B (with keyboard control).

- Using three 168-pin DIMM sockets, provides three banks of 64-bit wide path up to 384MB SDRAM or 768 EDO DRAM (with parity chip ECC support).

- Built-in Switching Voltage Regulator.(VRM 8.2 SPEC.)

- Supports CPU core voltage range from 2.0V up to 3.5V.

- Supports one AGP slot, four PCI slots with revision 2.1 interface compliant and two 16-bit ISA slots.

- Dual Master IDE connectors support Ultra DMA/33, up to four devices in two channels for connecting of high capacity hard drive, CD-ROM disk drive, tape backup etc..

- Two USB (Universal Serial Bus) Pin-headers support up to 127 devices.

- PS/2 keyboard connector and PS/2 mouse Pin-header.

- WINBOND W83877TF high-speed Super Multi-I/O chipset.

- Supports Infrared transfer (IrDA TX/RX) connection.

- One FDC port supports two devices up to 2.88MB.

- Two 16550A fast UARTs compatible serial ports.

- One EPP/ECP mode parallel printer port.

- Hardware Dimension is 220mm x 245mm (8.66" x 9.65"); BabyAT Form Factor.

- Supports AT & ATX power connectors.

INSIDE THE ATC-5200 MAINBOARD PACKAGE

The mainboard comes securely packed in a durable box and shipping carton. If any of the following items are missing or damaged, please contact your supplier.

Each mainboard contains:

Q'TY	Description	
1	Mainboard	: ATC-5200.
1	CD	: Enhanced IDE driver
		Award system BIOS Update Utility
		VIA MVP3 AGP VGA Vgart.vxd
		Utility
		VIA IRQ Routing Utility
		VIA MVP3 ACPI compliant utility
1	Cable	: Enhanced IDE cable.
1	Cable	: F.D.D. cable.
1	Cable	: Serial & PS/2 mouse.
1	Cable	: Serial / Parallel.
1	Manual	: User manual. (English version)

CHAPTER 1   INTRODUCTION

It is important to remember that you must be set **Jumper of JP1, Jumper of JP2, Jumper of JP3, Jumper of JP4, DIP switch of SW1 and SW2** accurately, so that you can power up your system correctly.

The followings are the description of these important DIP switch & jumpers :

```
SW1,JP2,JP3,JP4 : The completed jumper group to setup CPU and system
                  frequency.
SW2, JP1        : The completed jumper group to setup CPU working
                  voltage.
```

The followings are the locations of these important DIP switches & Jumpers :

JP2   JP3   SW2   JP1(RED COLOR   SW1   DIMM
(YELLOW   JUMPER)   Slots
 COLOR
 JUMPER)   SOCKET 7   JP4
                                      (YELLOW COLOR
                                       JUMPER)
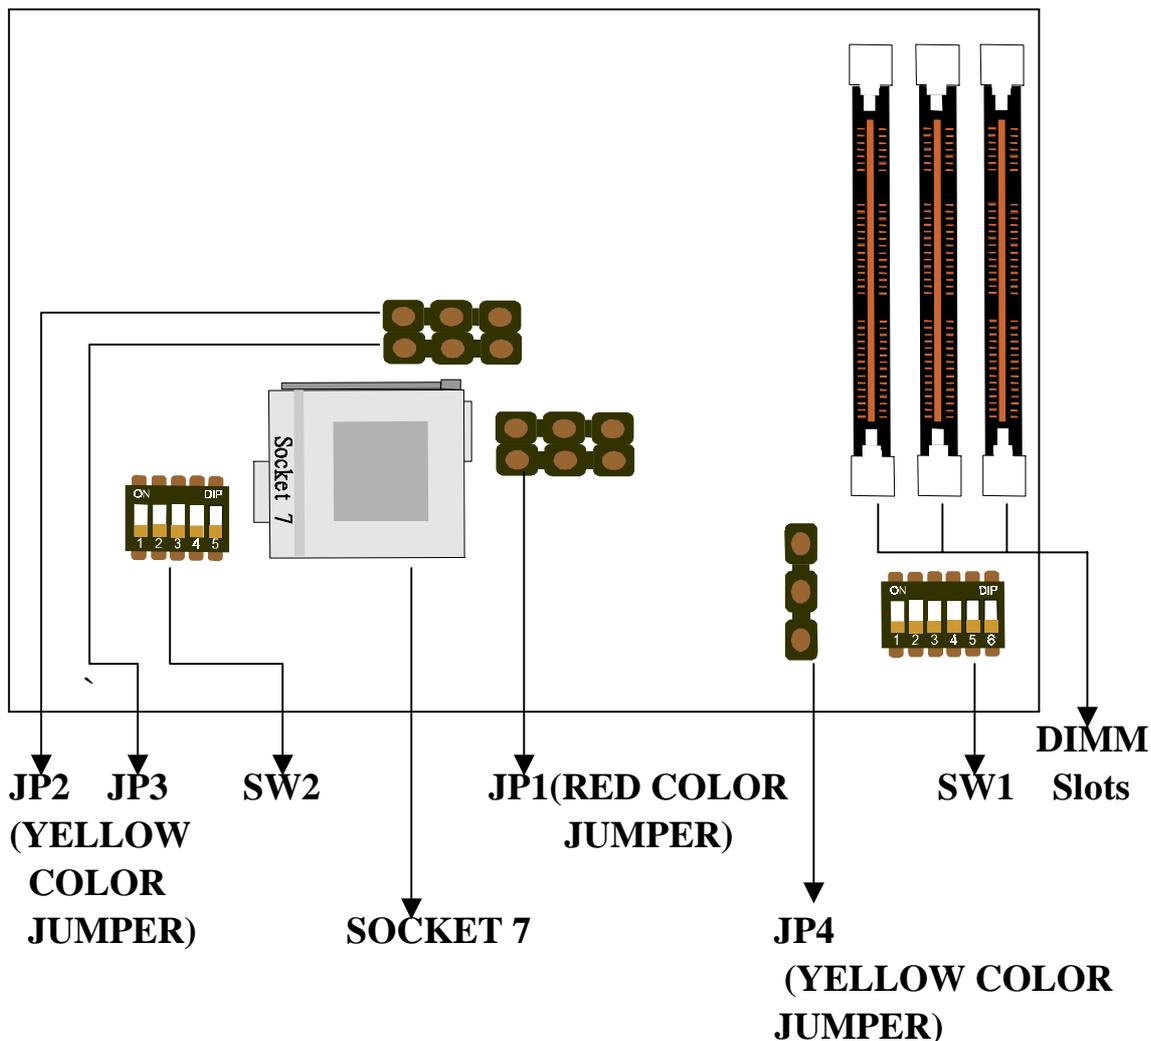

1-1 SOFTWARE POWER OFF CONTROL

The mainboard design supports Software Power Off Control feature through the SMM code in the BIOS under Windows 95/98, and MS-DOS operation system environment.

First, you should connect the power switch cable (provided by the ATX case supplier) to the connector "PS-ON" on the mainboard. In the BIOS screen of POWER MANAGEMENT SETUP', choose "User Defined" (or "Min. Power Saving" or "Max. Power Saving") in 'Power Manager' and choose "Yes" in 'PM Control by APM'.

In Windows 95/98, if you would like to power off the system, you just choose "shutdown the computer ?" in the "Shut Down Windows" from Windows 95/98, then the system power will be off directly, and become the stand-by status. If you would like to restart the system, just press the power switch button, and the system will be powered on.

Note : If you will leave your system for several days, we suggest you use hardware power off to shutdown your system.

1-2 Wake-On-LAN

The remote Wake-On-LAN mode of operation is a mechanism that uses Advanced Micro Device Magic Packet technology to power up a sleeping workstation on the network. This mechanism is accomplished when the LAN card receives a specific packet of information, called a Magic Packet, addressed to the node on the network. For additional protection, Secure ON is an optional security feature that can be added to the Magic Packet that requires a password to power up the sleeping workstation. When the LAN card is in remote Wake-On-LAN mode, main system power can be shut down leaving power only for the LAN card and auxiliary power recondition.

The LAN card performs no network activities while in the remote Wake-On-LAN mode of operation. It only monitors the network for receipt of a Magic Packet. If a Magic Packet is addressed to the LAN card on the network, the LAN card wake up the system. If the Secure ON feature has been enabled, the password added to the Magic Packet is also verified prior to waking up the system.

WOL LAN card will provide a 3-pin line to connect the WOL connector on the mainboard.

CAUTION :
For Wake-on-LAN, the +5V standby line for the power supply must capable of Delievring +5V ±5% at 720mA. Failure to provide adequate standby current when implementing Wake-on-LAN, can damage the power supply.

Before you enable Wake-on-LAN function, first check your power supply specification to meet the above requirement or not.

CHAPTER 2   INSTALLATION

2-1 INSTALLATION PROCEDURE

Before installing the computer, please prepare all components such as CPU, DRAM; peripherals such as hard drive, keyboard, CD-ROM disk drive and accessories such as cables. Then, install the system as following:

1. Plug CPU, heat sink, cooling fan and DRAM modules into the ATC-5200 mainboard.
2. Set jumpers based on your configuration.
3. Set DIP switch based on your configuration.
4. Plug add-on cards into PCI/ISA slots, if needed.
5. Connect the power supply.
6. Connect I/O and other cables to the system.
7. Make sure all components and devices are well connected, turn on the power and setup System BIOS based on your configuration.
8. Install peripheral devices, add-on card drivers and test them.

If all of above procedures are running successfully, turn it off and screw the chassis cover to the system, and then connect external devices which are cabled to the system.

2-2 CPU INSTALLATION

ATC-5200 supports one Pentium level CPU.

For installation, please notice CPU pin 1 must align with the ZIF socket 7 pin 1 location. Before you install or upgrade your CPU, please read CPU guide from CPU manufacturer to make sure the CPU voltage specification. Then choose the right installation in section 2-2-1 based on your CPU type / brand and follow the description to setup DIP Switch & Jumpers.

ATC-5200 uses the following DIP Switch & Jumpers for the user to install CPU easily.

SW1 (1-3）for External Clock and SW1（4-6）for Frequency_Ratio.
SW2 for different CPU voltage value;
JP1 for Single/Dual CPU Voltage selection.
JP2 for CPU host clock/PCI clock ratio selection , 2 : 1 or 3 : 1 .
JP3 & JP4 for CPU host clock/DRAM clock ratio selection, Asynchronous or Synchronous .

The following DIP switches & Jumpers charts are the effective information for you to setup correct CPU and total system speed , when installing your system with ATC-5200 mainboard :

SW1 & JP2 setting
(The setting for CPU host clock , Times of multiple clock & PCI clock ratio)

SW1	SW1-1	SW1-2	SW1-3	JP2	SW1	SW1-4	SW1-5	SW1-6
66	OFF	OFF	OFF	2-3*	2.0X	ON	OFF	OFF
68.5	ON	ON	ON	2-3*	2.5X	ON	ON	OFF
75	OFF	ON	OFF	2-3*	3.0X	OFF	ON	OFF
83.5	ON	ON	OFF	1-2**	1.5X;3.5X	OFF	OFF	OFF
95	ON	OFF	ON	1-2**	4.0X	ON	OFF	ON
100	OFF	OFF	ON	1-2**	4.5X	ON	ON	ON
					5.0X	OFF	ON	ON
					5.5X	OFF	OFF	ON

* Set JP2 to Pin 2-3 : the PCI clock ratio is 1 : 2 , it means :

                 If the CPU host clock is lower than 75 MHz ,

                 it Is recommend to setup as 1 : 2 .

** Set JP2 to Pin 1-2 : the PCI clock ratio is 1 : 3 , it means :

                 If the CPU host clock is higher than 83.3 MHz ,

                 It is recommend to setup as 1 : 3 .

JP3 & JP4 Setting

DRAM_CLK	JP3	JP4
ASYNC.*	Pin 1-2	Pin 2-3
SYNC.**	Pin 2-3	Pin 1-2

* ASYNC. mode : When the CPU host clock is 100 MHz , and the DRAM clock is 66 MHz .

** SYNC. mode : 1. When the CPU host clock is 100 MHz, and the SDRAM clock is followed PC-100 specification.

    2. When the CPU host clock is 60 ~ 83.3 MHz, and the DRAM/SDRAM clock is not PC-100 spec. .

SW 2 Setting

Vcore	SW2-1	SW2-2	SW2-3	SW2-4
2.2V	OFF	ON	OFF	OFF
2.7V	ON	ON	ON	OFF
2.8V	OFF	OFF	OFF	ON
2.9V	ON	OFF	OFF	ON
3.2V	OFF	OFF	ON	ON
3.3V	ON	OFF	ON	ON
3.5V	ON	ON	ON	ON

JP1 setting

(The setting for Single/Dual Voltage supporting for Pentium level Processor)

Mode	JP1	
Single Voltage Mode(Vcore = Vi/o)*	3-5 close	4-6 close
Dual Voltage Mode(Vcore ≠Vi/o)**	1-3 close	2-4 close

* P54C mode (Single Voltage Mode) : supports for intel Pentium, AMD-K5, Cyrix 6X86, IDT Win Chip C6.
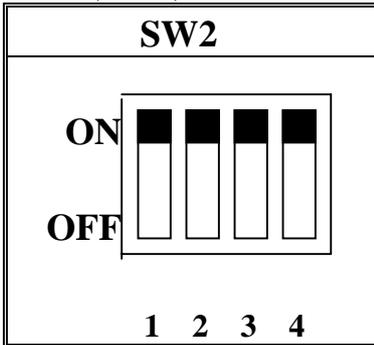

** P55C mode (Dual Voltage Mode) : supports for intel Pentium MMX, AMD-K6, AMD-K6-2, Cyrix 6X86L, Cyrix 6X86MX, Cyrix M II.

# 2-2-1 CPU TYPE SELECTION

A. INTEL PENTIUM® CPU (P54C)

※ **P54C VRE : 3.400V~3.600V** (The fourth line of the mark on the under-side of the processor contains a code that identifies the voltage level type. V is VRE, S is standard.)

SW2(3.5V)

2-3 SYSTEM MEMORY INSTALLATION

The ATC-5200 provides three 168-pin DIMM sockets for system memory expansion from 8MB to 768MB. These three DIMMs are arranged to two banks, please refer to page A. Each bank provides 64-bit wide data path.

※ Samples of System Memory Combinations Options ※

BANK0 DIMM 1	BANK1 DIMM 2	BANK2 DIMM 3	Total Memory DIMM 1-3
	16MBx1	16MBx1	32MB
16MBx1	-	16MBx1	32MB

2-4 CONNECTORS DESCRIPTION

The locations of following connectors are indicated in page A. When you plug wires into the following connector of CONN1, you should have the pin 1 edge of the wires align with the pin 1 end of the connector.

CONN1 : speaker, keyboard lock, reset, SMI, turbo LED, and IDE LED connectors.
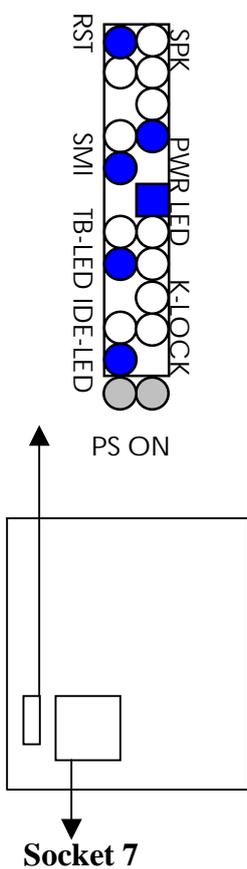

SPK : speaker

◯ Speaker
◯ GND
◯ GND
● VCC

Power LED connector

■ Power LED +
◯ N/C
◯ GND (power)
◯ Keylock
◯ GND

RST : Reset connector

● Reset Signal
◯ GND

SMI : SMI lead

◯ GND
● SMI Signal

TB-LED : Turbo LED indicator, LED on when system runs higher speed.

◯ GND
● +5V

IDE-LED : IDE devices indicator LED connector. IDE-LED stays ON indicates

LED signal   on-board IDE devices in operation.

Socket 7

PS ON

RST   SPK
SMI   PWR LED
TB-LED IDE-LED   K-LOCK
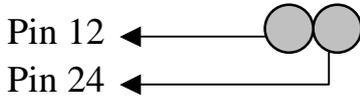

Pin 12 ◄──────── ⬤⬤ **PS_ON : Power Button**
Pin 24 ◄────────   Pin 12 : PS_ON   Pin 24 : +5VSB

SOCKET 7
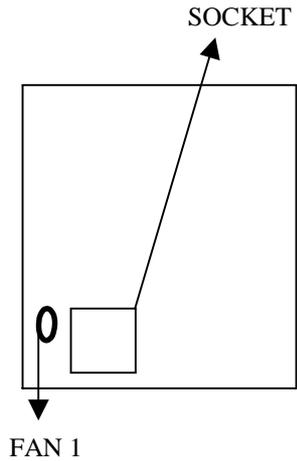

FAN1 : CPU cooling fan connector. Wire with
  +12V voltage (most likely red wire) must be
  plugged into pin2, and GROUND wires
  (most likely black wire) must be plugged into
  pin1. Please confirm the wire color
  re-presentation with your supplier.
CAUTION: Plug the wire into wrong connector will
          DAMAGE fan and mainboard.

FAN 1

USB1 : USB connector; Universal Serial Bus;this is used to connect USB devices through an optional dual head cable with a iron plane. OC0 and OC1 are used to mention the status of the USB power supply lines.
CAUTION: Plug wire into wrong connector will DAMAGE USB devices and mainboard.

2-5 IDE DRIVER INSTALLATION

The IDE driver installation procedures are in the following :

Setup from Windows 95/98 :

1. Starting Windows 95/98.

2. Put All-In-One CD into your CD-ROM drive.

3. In "My Computer" Windows, double clicking "VIA" icon.

4. Choose "IDE driver".

5. Follow the screen instructions to complete the installation.

Setup from WinNT :

1. Starting WinNT.

2. Put All-In-One CD into your CD-ROM drive.

3. Choose "VIA MVP3 Integrated Installation".

4. Choose "IDE driver".

5. Follow the screen instructions to complete the installation.

6. In "control panel" Windows, click "SCSI Adatpers" twice.

7. In "SCSI Adapters" Windows, choose "Drivers".

8. Choose "Add".

9. In manufacturers, select "additional models", then in SCSI adapter, select "VIA bus master IDE drivers", then choose "OK".

10. Restart your computer.

2-6 VIA MVP3 AGP VGA Driver Installation

1. Put All-In-One CD into your CD-ROM drive.
2. In "My computer" Windows, choose VxD driver.
3. Follow the screen instructions to complete the installation.

Remark :
Please install two VIA utilities from our CD, " VIA Routing Utility " & " VIA MVP3 ACPI Compliant utility ", when you install Windows95/98 on your system, in order to get best compatibility.

CHAPTER 3   Award BIOS SETUP

Award BIOS manufacturer provides access to the system BIOS through the hardware and software on each ATC-5200 mainboard. The hardware consists of a Flash ROM and the software is a group of programs that are installed in the ROMBIOS along with all the other data the BIOS must contain.

The ATC-5200 mainboard will require special driver supplied by the manufacturer to update the BIOS SETUP program. It is a good idea to read the next page for details for update BIOS driver installation or you can ask your system dealer to do it for you.

When the driver has been successfully updated, it is very important to contact your system dealer to change the CMOS settings for your computer. The CMOS settings are shown in the following pages.

NOTE : To clear CMOS you should unplug the power cord, then set 2-3 to clear, put it back to normal position and plug the power cord again.

	JP8
Normal	1-2
Clear	2-3

Normal CMOS   **Clear CMOS**

JP8   **AGP slot**   **PCI slots**
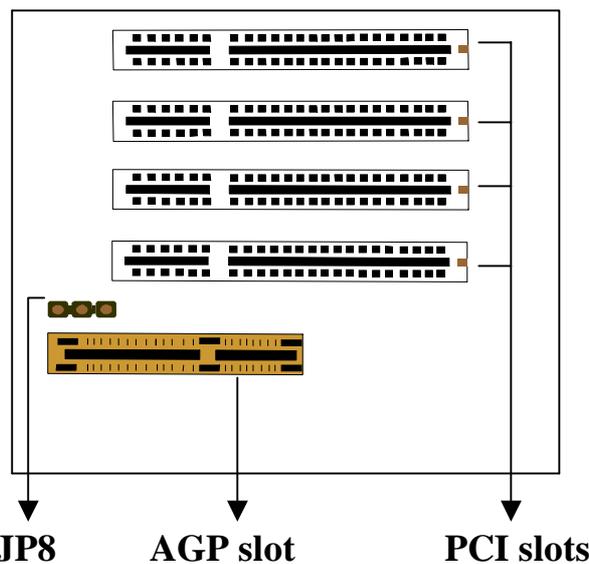

3-1 UPDATE BIOS PROCEDURE

If the BIOS needs to be updated, you can get a diskette with the updated BIOS drive from your system supplier or from your All-In-One CD(in "flash" directory). The updated BIOS drive includes :

    "awdflash.exe"   --   BIOS update utility program

    "awdflash.doc"

    "(update BIOS filename with version number).bin"

The update procedure is in the following:

1. Boot the system to DOS mode in a normal manner.
2. Insert the updated diskette to drive A (or B), or put All-In-One CD into your CD-ROM drive.
3. Change working directory to floppy drive, A or B, or change working directory to your CD-ROM drive, D or E, which contains the update BIOS driver. --   Type "a:\" or "b:\", "ENTER" or "d:\" or "e:\", "ENTER".
4. Run the BIOS update utility   --   Type "cd flash", then type "awdflash", then press "ENTER" key.
5. Type "(update BIOS file name with version number).bin", ENTER.
6. If you do not want to save the old BIOS Type "N" when the screen displays the message : " Do you want to save BIOS (Y/N) ?".
7. Type "Y" when the screen shows the message : " Are you sure to program (Y/N) ?".
8. Follow instructions displayed on the screen.   DO NOT remove the update BIOS diskette from the floppy drive nor turn the system power off until the BIOS update is completed.
9. Turn the power off. Clear the data in CMOS according to the procedure described in the previous page.
10. Turn the system power on and test that your system is working properly.

3-2   Award SYSTEM BIOS
CONFIGURATION SETUP

The following pages explain how to set up the system configuration (CMOS) under the Award BIOS. The SETUP program is stored in the Read-Only-Memory (ROM) on the mainboard. To do the SETUP procedure, press the <Del> key when the system is booting up. The following main menu will appear. Please select " STANDARD CMOS SETUP" to enter the next screen.

ROM PCI/ISA BIOS (ATC-5200)
CMOS SETUP UTILITY
AWARD SOFTWARE, INC.

STANDARD CMOS SETUP	INTEGRATED PERIPHERALS
BIOS FEATURES SETUP	SUPERVISOR PASSWORD
CHIPSET FEATURES SETUP	USER PASSWORD
POWER MANAGEMENT SETUP	IDE HDD AUTO DETECTION
PNP/PCI CONFIGURATION	SAVE & EXIT SETUP
LOAD BIOS DEFAULTS	EXIT WITHOUT SAVING
LOAD SETUP DEFAULTS	
ESC: Quit	↓→←:Select Item
F10: Save & Exit Setup	(Shift) F2 : Change Color
Time, Date, Hard Disk Type	

The section on the bottom of the main menu explains how to control this screen. The other section displays the items highlighted in the list.

This screen records some basic hardware information, and sets the system clock and error handling. These records can be lost or corrupted if the on-board battery has failed or is weak.

F1   :   Help   (Shift) F2 : Change Color

Date   The date format is <day>, <date><month><year>.

Press<F3> to show the calendar.

Day	The day, from Sun to Sat, determined by the BIOS and is display-only
Date	The date, from 1 to 31
Month	The month, Jan. through Dec.
Year	The year, from 1900 to 2099

__Time__ The time format is <hour><minute><second>. The time is calculated based on the 24-hour military-time clock. For example, 1p.m. is 13:00:00.

__Primary Master__
__Primary Slave__
__Secondary Master__
__Secondary Slave__

These categories identify the types of the 2 channels that have been installed in the computer. There are 45 predefined types and 4 user definable types are for Enhanced IDE BIOS. Type 1 to 45 are predefined. Type **'user'** is user-definable. Press PgUp/PgDn to select a numbered hard disk type or type the number and press<Enter>. If you select **'Auto', the** BIOS will auto-detect the HDD & CD-ROM Drive at the POST stage and show the IDE for HDD & CD-ROM Drive. If you select **'user'**, you will need to know the information listed below. Enter the information directly from the keyboard and press <Enter>. This information should be from your hard disk vender or dealer. If the controller of the HDD interface is ESDI, the selection shall be '**Type 1'**; if SCSI, the selection shall be **'None'**. If no device is installed select **'NONE'** and press <Enter>.

Type	drive type
SIZE	Automatically adjusts
CYLS	number of cylinders
HEAD	number of heads
PRECOMP	write precom
LANDZ	landing zone
SECTOR	number of sectors
MODE	mode type

__Drive A__
__Drive B__

This category identifies the types of floppy disk drive A or drive B that have been installed in the computer.

None	No floppy drive installed
360K, 5.25 in	5.25" PC-type 360KB capacity
1.2M, 5.25 in	5.25" AT-type 1.2MB capacity
720K, 3.5 in	3.5" double-side 720KB capacity
1.44M, 3.5 in	3.5" double-side 1.44MB capacity
2.88M, 3.5 in	3.5" double-side 2.88MB capacity

Floppy 3 Mode Support   This is the Japanese standard floppy drive. This standard stores 1.2MB in a 3.5" diskette

Video   This category selects the type of video adapter used for the primary system monitor. Although secondary monitors are supported, you do not have to select the type in Setup.

EGA/VGA	Enhanced Graphics Adapter/Video Graphics Array. For EGA, VGA, SEGA, SVGA or PGA monitor adapters
CGA 40	Color Graphics Adapters, power up in 40 column mode
CGA 80	Color Graphics Adapters, power up in 80 column mode
MONO	Monochrome adapter, includes high resolution monochrome adapters

Halt On   This category determines whether the computer will stop if an error is detected during power up.

No errors	The system boot will not be stopped for any error that may be detected
All errors	When the BIOS detects a non-fatal error the system will be stopped and you will be prompted
All, But Keyboard	The system boot will not stop for a keyboard error, it will stop for all other errors
All, But Diskette	The system boot will not stop for a disk error, it will stop for all other errors
All, But Disk/Key	The system boot will not stop for a disk or keyboard error, it will stop for all other errors

Memory   This category is display-only which is determined by POST (Power On Self Test) of the BIOS.

Base Memory   The POST will determine the amount of base (or conventional) memory installed in the system. The value of the base memory is typically 512K or 640K based on the memory installed on the motherboard.

Extended Memory   How much extended memory is present during the POST. This is the amount of memory located above 1MB in the CPU's memory address map.

Other Memory   This refers to the memory located in the 640K to 1024K address space. This is memory that can be used for different applications. DOS users this area to load device drivers in an effort to keep as much base memory free for application programs. The BIOS is the most frequent user of this RAM area since this is where it shadows RAM.

This screen is a list of system configuration options. Some of them are defaults required by the mainboard's design, others depend on the features of your system.

ROM PCI/ISA BIOS (ATC-5200)

CMOS SETUP UTILITY

AWARD SOFTWARE, INC.

STANDARD CMOS SETUP	INTEGRATED PERIPHERALS

Virus, Protection, Boot Sequence

ROM PCI/ISA BIOS (ATC-5200)

BIOS FEATURES SETUP

AWARD SOFTWARE, INC.

Virus Warning	: Disabled	Video BIOS Shadow	: Enabled
CPU Internal Cache	: Enabled	C8000-CBFFF Shadow	: Disabled
External Cache	: Enabled	CC000-CFFFF Shadow	: Disabled
Quick Power On Self Test	: Enabled	D0000-D3FFF Shadow	: Disabled
Boot Sequence	: A,C,SCSI	D4000-D7FFF Shadow	: Disabled
Swap Floppy Drive	: Disabled	D8000-DBFFF Shadow	: Disabled
Boot Up Floppy Seek	: Enabled	DC000-DFFFF Shadow	: Disabled
Boot Up NumLock Status	: On		
Gate A20 Option	: Fast		
Memory Parity/ECC Check	: Enabled		
Typematic Rate Setting	: Disabled		
Typematic Rate(Chars/Sec)	: 6		
Typematic Delay(Msec)	: 250	Esc : Quit ↑↓→←:Select Item	
Security Option	: Setup	F1 : Help PU/PD/+/- : Modify	
PCI/VGA Palette Snoop	: Disabled	F5 : Old Values (SHIFT) F2 : Color	
OS Select for DRAM>64MB	: Non-OS2	F6 : Load BIOS Defaults	
Report No FDD For Win95	: No	F7 : Load Setup Defaults	

Virus Warning   When this item is enabled, the Award BIOS will monitor the
boot sector and partition table of the hard disk drive for any

50

attempt at modification. If an attempt is made, the BIOS will halt the system and the following error message will appear. Afterwards, if necessary, you will be able to run an antivirus program to locate and remove the problem before any damage is done.

```
! WARNING !

Disk boot sector is to be modified
Type 'Y' to accept write or 'N' to abort write
Award Software, Inc.
```

Enabled	Activates automatically when the system boots up, if anything attempts to access the boot sector or hard disk partition table will cause a warning message to appear.
Disabled	No warning message will appear when anything attempts to access the boot sector or hard disk partition table.

Many disk diagnostic programs which attempt to access the boot sector table can cause the above warning message. If you will be running such a program, we recommend that you first disable Virus Protection beforehand.

CPU
Internal Cache
External Cache

These two categories speed up memory access. However, it depends on CPU/chipset design. The default value is 'enabled'.

Quick Power On
Self Test

This category speeds up Power On Self Test after you power up the computer. If you set Enabled, BIOS will shorten or skip some checked items during POST.

Boot Sequence

This category determines which drive is to search first for the Disk Operating System (i.e., DOS).

A, C, SCSI	System will first search for floppy disk drive then hard disk drive, and the next is SCSI device.
C, A, SCSI	System will first search for hard disk drive then floppy disk drive, and the next is SCSI device.
C, CDROM, A	System will first search for hard disk drive then CDROM drive, and the next is floppy disk drive.
CDROM, C, A	System will first search for CDROM drive then hard disk drive, and the next is floppy disk drive.
D, A, SCSI	System will first search for secondary hard disk drive then floppy disk drive, and the next is SCSI device.
E, A, SCSI	System will first search for third hard disk drive then floppy disk drive, and the next is SCSI device.
F, A, SCSI	System will first search for fourth hard disk drive then floppy disk drive, and the next is SCSI device.
SCSI, A, C	System will first search for SCSI device then floppy disk drive, and the next is hard disk drive.
SCSI, C, A	System will first search for SCSI device then hard disk drive, and the next is floppy disk drive.
C only	System will search for hard disk drive only.
LS/ZIP, C	System will first search for LS120 or IOMEGA (ZIP) drive, and the next is hard disk drive.

C is primary master; D is primary slave;
E is secondary master, F is secondary slave

Swap Floppy Drive   This item allows you to determine whether to enable the swap floppy drive or not.
The choice : Enabled/ Disabled

Boot Up Floppy Seek   During POST, the BIOS will determine if the floppy disk drive installed is 40 tracks (360K) or 80 tracks (720K, 1.2M, 1.44M)

Enabled	BIOS searches for floppy disk drive to determine if it is 40 or 80 tracks
Disabled	BIOS will not search for the type of floppy disk drive by track number

Boot Up NumLock Status   This allows you to determine the default state of the numeric keypad. By default, the system

boots up with NumLock on.

On	Keypad is numeric keys
Off	Keypad is arrow keys

Gate A20
Option

This entry allows you to select how the gate A20 is handled. The gate A20 is a device used to address memory above 1 MB. Initially, the gate A20 was handled via a pin on the keyboard. Today, while keyboards still provide this support, it is more common, and much faster, for the system chipset to provide support for gate A20.
Normal is keyboard; Fast is chipset.

Memory Parity/
ECC Check

Select parity, ECC, or Disabled, depending on the type of DRAM installed in your system.
The choice : ECC, Parity, Disabled

Typematic Rate
Setting

This determines if the typematic rate is to be used. When disabled, continually holding down a key on your keyboard will generate only one key instance. In other words, the BIOS will only report that the key is down. When the typematic rate is enabled, the BIOS will report as before, but it will then wait a moment, and, if the key is still down, it will begin the report that the key has been depressed repeatedly. For example, you would use such a feature to accelerate cursor movements with the arrow keys.
The choice : Enabled/Disabled

Typematic Rate
(Chars/Sec)

When the typematic rate is enabled, this section allows you select the rate at which the keys are repeated.

6	6 characters per second
8	8 characters per second
10	10 characters per second
12	12 characters per second
15	15 characters per second
20	20 characters per second
24	24 characters per second
30	30 characters per second

Typematic Delay
(Msec)

When the typematic rate is enabled, this section allows you select the delay between when the

key was first depressed and when the acceleration begins.

250	250 msec
500	500 msec
750	750 msec
1000	1000 msec

__Security Option__   This category allows you to limit access to the system and Setup, or just to Setup.

System	The system will not boot and access to Setup will be denied if the correct password is not entered at the prompt
Setup	The system will boot, but access to Setup will be denied if the correct password is not entered at the prompt

To disable security, select PASSWORD SETTING at Main Menu and then you will be asked to enter password. Do not type anything and just press <Enter>, it will disable security. Once the security is disabled, the system will boot and you can enter Setup freely.

PCI/VGA Palette Snoop   It determines whether the MPEG ISA/VESA VGA cards can work with PCI/VGA or not.

Enabled	When PCI/VGA working with MPEG ISA/VESA VGA Card
Disabled	When PCI/VGA not working with MPEG ISA/VESA VGA Card

OS Select for *DRAM > 64MB*   This item allows you to access the memory that is over 64MB in OS/2.
The choice : Non-OS2 or OS2

Report No FDD *For WIN 95*   Set this item to Yes BIOS will report FDD to Win95.
If in standard CMOS setup, set Drive A to none, and set

	this item to yes. Inside Win95, My Computer and File manager Disk(A:) will show Removable Disk (A:).
Video BIOS Shadow	Determines whether video BIOS will be copied to RAM. However it is optional depending on chipset design. Video Shadow will increase the video speed. The choice : Enabled/Disabled
C8000 - CBFFF Shadow ***DC000 - DFFFF Shadow***	These categories determine whether option ROMs will be copied to RAM. An example of such option ROM would be the support of onboard SCSI. The choice : Enabled/Disabled

UPDATE

This screen controls the setting for the chipset on the mainboard.

AT Clock, DRAM Timings, ...

ROM PCI/ISA BIOS (ATC-5200)

CHIPSET FEATURES SETUP

AWARD SOFTWARE, INC.

Bank 0/1 DRAM Timing	: FP/EDO 60ns	OnChip USB	: Disabled
Bank 2/3 DRAM Timing	: FP/EDO 60ns	Auto Detect DIMM/PCI ClK	: Enabled
Bank 4/5 DRAM Timing	: FP/EDO 60ns	Spread Spectrum Modulatd	: Disabled
SRAM Cycle Length	: 3		
DRAM Read Pipeline	: Disabled		
Sustained 3T Write	: Enabled		
Cache Rd+CPU Wt Pipeline	: Disabled		
Cache Timing	: Fast		
Video BIOS Cacheable	: Disabled		
System BIOS Cacheable	: Disabled		
Memory Hole At 15Mb Addr.	: Disabled		
AGP Aperture Size (MB)	: 128MB		

Esc: Quit   :Select Item

F1   : Help   PU/PD/+/-:Modify

F5   : Old   Values   (Shift)F2 :Color

F6   :Load BIOS Defaults

F7   : Load Setup Defaults

Bank 0/1/2/3/4/5   The DRAM speed is controlled by the DRAM timing
DRAM Timing   registers. The programmed into this register are depend on

the system design. Slower rates may be required in certain system designs to support loose layouts or slower memory. i.e. 60ns; 70ns

SDRAM Cycle Length   You should select CAS latency time in HCLKS of 2/2 or 3/3. The system board designer should set the values in this field, depending on the DRAM installed. Do not change the values in this field unless you change specifications of the installed DRAM or the installed CPU..
The choice : 2, .3

DRAM Read Pipeline   Enable/Disable DRAM Read Pipeline Cycle.

Sustained 3T Write   Enabled : set cache to write back mode.
Disabled : set cache to write through mode.

Cache Rd+CPU Wt Pipeline   Enable/Disable Cache Read Write cycle.

Cache Timing   Fastest : better system performance will occur.

Video BIOS Cacheable   Select Enabled allows caching of the video BIOS ROM at F0000h-FFFFFh, resulting in better system performance. However, if any program writes to this memory area, a system error may result.

System BIOS Cacheable   Select Enabled allows caching of the system BIOS ROM at F0000h-FFFFFh, resulting in better system performance. However, if any program writes to this memory area, a system error may result.

Memory Hole At 15Mb Addr.   In order to improve performance, certain space in memory can be reserved for ISA cards. This memory must be mapped into the memory below 16MB.

AGP Aperture Size (MB)   Select the size of the AGP aperture. The aperture is a portion of the PCI memory address range dedicated for graphics memory

address space. Host cycle that hit the aperture range are forwarded to the AGP without any translation. See www.agpforum.org for AGP information.

Onchip USB   Enable/Disable USB.

Auto Detect   If this item is enabled, the unused DIMM and PCI slot clock
DIMM/PCI ClK   will be disabled. If this item is disabled the unused DIMM
        and PCI slot will still get the active clock signal.

Spread Spectrum Enable / Disable this item the BIOS will Enable / Disable
Modulated   the clock generator spread spectrum .

This screen controls the 'green' features of this mainboard.

RTC Alarm Resume	: Disabled	F5 : Old Values (Shift) F2: Color		
		F6 : Load BIOS Defaults		
		F7 : Load Setup Defaults		

Power Management   This category allows you to select the type (or
                 degree) of power saving and is directly related to

59

the following modes **: Doze; Standby; Suspend; HDD Power Down.**

Min. Power Saving	Minimum power management. Doze =1hr.; Standby=1hr.; Suspend=1hr.; HDD Power Down=15min
Max. Power Saving	Maximum power management **only available for SL CPU**.Doze=1min.; Standby=1min.;Suspend=1min.;HDD Power Down=1min
User Defined	Allows you to set each mode individually. When not disabled, each of the ranges are from 1min. to 1hr. except for HDD Power Down which ranges from 1 to 15min. and disable

If you would like to use Software Power-off Control function, you cannot choose" Disabled "here, and should select "Yes" in PM Control by APM.

PM Control by APM   When enabled, an Advanced Power Management   device will be activated to enhance the Max. Power Saving Mode and stop the CPU internal clock. If the Max. Power Saving is not enabled, this will be shown as NO.

Video Off Option   When enabled, this feature allows the VGA adapter to operate in a power saving mode.

Always On	Monitor will remain on during power saving modes.
Suspend	Monitor blanked when the systems enters the Suspend mode.
Susp, Stby	Monitor blanked when the system enters Suspend or Standby mode.
All Modes	Monitor blanked when the system enters any power saving mode.

Video Off Method   This determines the manner in which the monitor is blanked.

V/H SYNC + Blank	This selection will cause the system to turn off the vertical and horizontal sync. ports and write blanks to the video buffer
Blank Screen	This option only writes blanks to the video buffer
DPMS	Initial display power management signaling

MODEM Use IRQ   This item determines the IRQ in which the MODEM can be used.

The choice : 3,4,5,7,9,10,11,NA.

Soft-Off by   Instant-off : When push the power button, the system power will
PWR-BTTN   be off immediately. Delay 4 sec : when push the power button, it will enter suspend mode. We need to push the power button and hold for 4 seconds to turn off the power.

The Following 4 modes are Green PC power saving functions which are only user configurable when 'User Defined' power management has been selected.

HDD Power Down   When enabled and after the set time of system inactivity, the hard disk drive will be powered down while all other devices remain active.

Doze Mode   When enabled and after the set time of system inactivity, the CPU clock will run at slower speed while all other devices still operate at full speed.

Suspend Mode   When enabled and after the set time of system inactivity, all devices except the CPU will be shut off.

VGA/LPT & COM   These are I/O events whose occurrence can prevent the system

HDD & FDD/ ***DMA/master***	from entering a power saving mode or can awaken the system from such a mode. In effect, the system remains alert for anything which occurs on a device which is configured as on, even when the system is in a password down mode. When an I/O device wants to gain the attention of the operating system, it signals this by causing an IRQ(Interrupt ReQuest) to occur. When the operating system is ready to respond to the request, it interrupts itself and performs the service. When set to off, activity will neither prevent the system from going into a power management mode nor awaken it.
Modem Ring ***Resume***	Enabled : when system in suspend mode, it can be wake up by modem. Disabled : it cannot be wake up by modem.
RTC Alarm ***Resume***	When enabled, two additional lines will added to the screen : Date (of Month) Alarm; Time (hh:mm:ss) Alarm to let user set The desired date and time. After power off, the system will automatic power on at the specified date and time.
Primary INTR	It enables/disables the IRQ3 to IRQ15 PM events.

This screen configures the PCI Bus slots.

PNP OS Installed
This item allows you to determine PnP OS or not.
Choices are Yes or No.

Resources Controlled By
The Award Plug and Play BIOS has the capability to automatically configure all of the boot and Plug and Play compatible devices. However, this capability means absolutely nothing unless you are using a Plug and Play OS such as Windows 95. Choices are Auto and Manual.

Reset Config- uration Data
This item allows you to determine whether to reset the configuration data or not.

ACPI I/O Device Node
Enable : reserve a node in memory for ACPI.

CPU to PCI Write Buffer
Enable/Disable CPU to PCI POST Write.

PCI Dynamic Bursting
Enable/Disable PCI burst operation.

PCI Master 0 WS Write
Enable : PCI Master 0 wait state mode.
Disable : PCI Master 1 wait state mode.

PCI Delay Transaction
This chipset has an embedded 32-bit posted write buffer to support deadly transactions cycles. Select "enabled" to support compliance with PCI specification version 2.1.
The choice : Enabled, disabled space

PCI Master Read Prefetch
Enable : always prefetch
Disable : prefetch only if enhance command

PCI#2 Access #1 Retry
Disable : PCI#2 will be disconnected until access finished
Enable : PCI#2 will be disconnected if max. retries are attempted without success.

AGP Master 1 WS Write
Enable/Disable AGP master one wait state write.

AGP Master 1 WS Read	Enable/Disable AGP master one wait state read.
PCI IDE IRQ Map To Primary IDE INT# Secondary IDE INT#	This allows you to configure your system to the type of IDE disk controller in use. By default, Setup assumes that your controller is an ISA device rather than a PCI controller. The most apparent difference is the type of slot being used. If you have equipped your system with a PCI controller, changing this allows you to specify which slot holds the controller and which PCI interrupt (A,B,C,D) is associated with the connected hard disk. This setting refers to the hard disk drive itself, rather than individual partitions. Since each IDE controller supports two separate hard drives, you can select the INT# for each. Again, you will note that the primary has a lower interrupt than the secondary as described in " *lot x Using INT#*" above. Select 'PCI Auto' allows the system to automatically determine how your IDE disk system is configured.
Assign IRQ for USB	When this items is enabled, the system will assign an IRQ for USB. If this item is disabled, the USB will not occupy an IRQ; therefore the IRQ of USB will be released for other usage.
Assign IRQ for VGA	When this items is enabled, the system will assign an IRQ for VGA. If this item is disabled, the VGA will not occupy an IRQ; therefore the IRQ of VGA will be released for other usage.

**This section page includes all the items of IDE hard drive and Programmed
Input/Output features. See also Section "Chipset Features Setup".**

ROM PCI/ISA BIOS (ATC-5200)
INTEGRATED PERIPHERALS
AWARD SOFTWARE, INC.

OnChip IDE First Channel	: Enabled	Onboard Parallel Port	: 378/IRQ7
Onchip IDE Second Channel	: Enabled	Onboard Parallel Mode	: ECP
IDE Prefetch Mode	: Enabled	ECP Mode Use DMA	: 3
IDE HDD Block Mode	: Enabled		
IDE Primary Master PIO	: Auto		
IDE Primary Slave PIO	: Auto		
IDE Secondary Master PIO	: Auto		
IDE Secondary Slave PIO	: Auto		
IDE Primary Master UDMA	: Auto		
IDE Primary Slave UDMA	: Auto		
IDE Secondary Master UDMA	: Auto		
IDE Secondary Slave UDMA	: Auto		
Init AGP Display First	: Disabled		
Onboard FDC Controller	: Enabled		
Onboard UART 1	: 3F8/IRQ4	Esc: Quit ↑↓→← :Select Item
Onboard UART 2	: 2F8/IRQ3	F1 : Help PU/PD/+/- : Modify
Onboard UART 2 Mode	: Standard	F5 : Old Values (Shift) F2: Color
		F6 : Load BIOS Defaults
		F7 : Load Setup Defaults

| *OnChip IDE First Channel* *OnChip IDE Second Channel* | This setup item allows you to either enable or disable the primary/secondary controller. You might choose to disable the controller if you were to add higher performance or specialized controller. |

IDE Prefetch Mode   Enable/Disable IDE Read Prefetch Buffer.

IDE HDD Block Mode   This allows your HD controller to use the fast block mode to transfer data to and from your HDD drive

Enabled	IDE controller uses block mode
Disabled	IDE controller uses standard mode

IDE Primary Master/Slave PIO *IDE Secondary Master/Slave PIO*   PIO - Programmed Input/Output, it allows the BIOS to tell the controller what it wants and then let the controller and the CPU to complete the task by themselves. This is simpler and more faster. Your system supports five modes, 0 - 4, which primarily differ in timing. When **Auto** is selected, the BIOS will select the best available mode.

IDE Primary Master/Slave UDMA *IDE Secondary Master/Slave UDMA*   Auto, will support the Ultra DMA function. Disabled, will not support the Ultra DMA function.

Init AGP Display First   This item will activate the AGP in the multi-display environment , it displayed, if disabled, and the system has both AGP and PCI VGA card, the AGP monitor will not display.

KBC input clock   Let user change the keyboard working clock.

On Board FDC Controller   This item will enable or disable the floppy disk controller.

On Board UART Port 1   User can select serial port IRQ. If set to 3F8/IRQ4, system will assign an IRQ for it. Note : set to Auto is not recommended.

On Board UART Port 2   User can select serial port IRQ. If set to 2F8/IRQ3, system will assign an IRQ for it. Note : set to Auto is not recommended.

OnBoard UART   This lets you select the Infrared mode. Choices are Standard,
2 Mode   HPIR, and ASKIR. If you choose HPIR or ASKIR mode,
                       the screen will show another two lines to let you choose
                       'IR Function Duplex' (Full or Half) and'RxD TxD Active'
                       (Hi Lo; Lo Hi; Hi Hi;Lo Lo).

On Board   Let user select IRQ for parallel port, when Disabled, the parallel
Parallel Port   port will be disabled

On Board   Let user select error check mode. This item is not recommended to
Parallel Mode   change except user has special request.

ECP Mode   Select a DMA channel for the port.
Use DMA   Choices are 3, 1.

ROM PCI/ISA BIOS (ATC-5200)

CMOS SETUP UTILITY

AWARD SOFTWARE, INC.

Hard Disks   Type   Size   CYLS   HEAD   PRECOMP   LANDZ   SECTOR   MODE

Primary Master :

Select Primary Master   Option (N=Skip) : N

Options	Size	CYLS	Head	PRECOMP	LANDZ	Sector	Mode
2(Y)	1337	648	64	0	2594	63	LBA
1	1339	2595	16	65535	2594	63	NORMAL
3	1338	1297	32	65535	2594	63	LARGE

Note : Some OSes (like SCO-UNIX) must use "Normal" for installation

ESC : Skip

The last second step is 'save and exit'. If you select this item and press 'Y', then these records will be saved in the CMOS memory on the mainboard. It will be checked every time you turn your computer on.

LOAD BIOS DEFAULTS

When your mainboard has problems and needs to trouble shoot the system, you can use this function. The default values loaded only affect the BIOS Features Setup, Chipset Features Setup, Power Management Setup and PNP/PCI Configuration Setup. There is no effect on the Standard CMOS Setup. To use this function, select it from main menu and press <Enter>. A line will appear on the screen asking if you want to load the BIOS default values. Press <Yes> and <Enter> then the BIOS default values will be loaded.

LOAD SETUP DEFAULTS

This allows you to load optimal settings which are stored in the BIOS ROM. The default values loaded only affect the BIOS Features Setup, Chipset Features Setup, Power Management Setup and PNP/PCI Configuration Setup. There is no effect on the Standard CMOS Setup. To use this function, select it from main menu and press <Enter>. A line will appear on the screen asking if you want to load the Setup default values. Press <Yes> and <Enter> then the Setup default values will be loaded.

SUPERVISOR PASSWORD / USER PASSWORD

This allows you to set the password. The mainboard defaults with password disabled.

Enter/Change password : Enter the current password, at the prompt, key-in your new password (up to eight alphanumeric characters), press <Enter>. At the next prompt, confirm the new password by typing it again and press <Enter>.

Disable password : Press the <Enter> key instead of entering a new password when the 'Enter Password' dialog box appears. A message will appear confirming that the password is disabled.

If you set both supervisor and user passwords, only the supervisor password allows you to enter the BIOS SETUP program.

CAUTION : If you forgot your password, you must disable
the CMOS by turning power off and set JP 8 to 'close'. And then
open reload the system.

IDE HDD AUTO DETECTION

This allows you to detect the IDE hard disk drivers' parameters
and enter them into 'Standard CMOS Setup' automatically.

If the auto-detected parameters displayed do not
match the ones that should be used for your hard drive,
do not accept them. Press <N> to reject the values
and enter the correct ones manually on the Standard
CMOS Setup screen.

SAVE & EXIT SETUP

This allows you to save the new setting values in the
CMOS memory and continue with the booting process.
Select what you want to do, press <Enter>.

EXIT WITHOUT SAVING

This allows you to exit the BIOS setup utility without
recording any new values or changing old ones.

※ Control Key Description ※

UP ARROW	↑	Move to previous item
DOWN ARROW	↓	Move to next item
LEFT ARROW	←	Move to the item in the left hand
RIGHT ARROW	→	Move to the item in the right hand
Esc KEY	Esc	Main Menu : Quit and not save changes Setup menu : Exit current page and return to main menu
PgUp KEY		Increase the numeric value or make changes
PgDn KEY		Decrease the numeric value or make changes
F1 KEY	Help	General help
F2 KEY	＜Shift＞+F2	Change color from total 16 colors
F5 KEY	Old Value	Restore the pervious CMOS value from CMOS
F6 KEY	Load BIOS default	Load the default CMOS value from BIOS default table
F7 KEY	Load setup default	Load Setup default
F10 KEY	Save & Exit Setup	Save all the CMOS changes and Exit setup, only for Main Menu

APPENDIX A

※※TECHNICAL SUPPORT REQUEST FORM※※

If the mainboard doesn't function properly, please complete the following information and return it to your system dealer. If the further information is needed, please attach it.

Model No :   ATC-5200   Date of Purchase : _____

Serial No : _____

HARDWARE :

	BRAND	MODEL	SPEED	Q'TY
DIM Module				

CPU SPEED : _____ MHz
DRAM :_____MB (_____ SDRAM/EDO DRAM)
Hard Disk Interface Controller : _____ IDE, ____ SCSI
Hard Disk Brand :_____, Model :_____, Capacity :_____
Display Controller Brand :_____,Model :_____
