Appendix A: Specifications I	

Chapter 1 : Getting Started

This chapter provides you with the short instruction on your DeskNote computer system that will help you to get the basic understanding about the computer.

-  Unpacking
-  Operating Environment
-  Powering the System
 - By AC Power Adapter
 - By Battery Pack
-  Opening the LCD Cover
-  Top-Front View
-  Rear View
-  Left-side View
-  Right-side View

Unpacking

Carefully unpack the DeskNote computer and the included accessories (Figure 1-1). Check the items one by one. If there is something wrong, contact your dealer immediately.

- DeskNote Computer.
- Carrying Bag.
- Power Adapter.
- Power Cord.
- User Manual.
- PS/2 Transfer Cable.
- Battery Pack.
- Drivers/Manual CD.

Figure 1-1

Operating Environment

As with any other precision electronic equipment, proper care and operation of your computer will prolong the use period. Make sure that the computer is not:

- Exposed to excessively heat or direct sunlight.
- Shocked or vibrated.
- Exposed to strong magnetic fields.
- Left in a place where foreign matter or moisture may affect the system.

Figure 1-2

Powering the System

You can use the AC power adapter or battery pack to power the computer system.

By AC Power Adapter

Use only the power adapter that comes with your computer. An incorrect type of power adapter will cause damage to the computer and its components.

1. Plug the power adapter cord into the AC-in socket on the rear panel of the computer.
2. Connect the power adapter with the power cord.
3. Plug the power cord into a properly grounded outlet (Figure 1-3).
4. Refer to Chapter 1, LED Indicators for more information on system power status.

Figure 1-3

By Battery Pack

The battery pack provides power for continuous portable operation of the computer. When using the battery no external power source is required. The actual operation time is related to the application and the configuration you're using.

Inserting

1. Turn the computer over.
2. Fit the battery pack firmly into the computer.
3. The latch will click into the place when it is seated.

Removing

1. Turn the computer over.
2. Press the latch in the indicated direction to release the battery pack (Figure 1-4).
3. Carefully lift the battery pack from the computer (Figure 1-5).

Figure 1-4

Opening the LCD Cover

1. Move the latch to the right to release the top cover. (Figure 1-6).
2. Lift the top cover to reveal the LCD panel and keyboard (Figure 1-7).
3. Adjust the LCD panel to a comfortable viewing angle.
4. Press the power button to turn the system on or off (refer to Chapter 1, Top-Front View for more information on the power button).

Figure 1-6

Figure 1-7

LED Indicators on the LCD Cover

Icon	Color	Description
ⓘ	Green	Battery power is used while the system is turned on.
	Red	AC power is used while the system is turned on.
🔋/🔌	Green	Battery is fully charged.
	Red	Battery is being charged.
	Blinking Red	Battery power is critically low.

Note:

The light on the indicator will blink when the battery is overheated.

Figure 1-8

 **Top-Front View****LCD Panel**

The computer provides you with a SVGA, LCD panel. Depending on the model you purchased, it can either be a 12.1" TFT, 12.1" HPA flat panel. An AGP bus video controller with 4MB-video memory drives the LCD panel.

Stereo Speakers

Two built-in speakers provide 3D stereo sound system.

Trackpad and Buttons

The pointing device features a sensitive glide pad for precise movements. It functions like a two-button mouse does. The right trackpad button is equivalent to the right mouse button; the left trackpad button is equivalent to the left mouse button.

Keyboard

The 84-key Windows 95 keyboard is integrated with the numeric keypad.

**Microphone**

The built-in microphone provides clear sound effect.

Figure 1-9

System Status LED Indicators

The LED indicators display the system's operation status.

Icon	Color	Description
	Green	Battery power is used while the system is turned on.
	Red	AC power is used while the system is turned on.
	Green	Battery is fully charged.
	Red	Battery is being charged.
	Blinking Red	Battery power is critically low.
	Green	The system has entered the configured suspend mode.
	Green	The embedded numeric keypad feature is activated
	Green	The Caps Lock feature is activated.
	Green	The Scroll Lock feature is activated.
	Green	The hard disk is being accessed.

Power Button

	Use this button to turn the system on or off.
	After proper configuration under SCU, this button can be used as suspend/resume hot button (refer to Chapter 3: BIOS Utilities, Power Menu for more information).

Note: After turning off the system, wait for a few seconds to power it on again.

Figure 1-10

Figure 1-11

 **Rear View****AC-in Socket**

Plug the AC adapter into this socket for power supply. To disconnect, pull the plug (not the cord) directly back.

**Parallel Port**

This parallel port supports EPP (Enhanced Parallel Port) and ECP (Extended Capabilities Port) modes.

**S-Video Jack**

Use this jack to transmit video signal to a TV set. You may need to select the video standard (NTSC/PAL) for video display (please refer to Chapter 3, Components Menu for more information).

**USB Port**

The Universal Serial Bus (USB) port simplifies the expansion capability for peripheral devices.

**Serial Port**

The serial port features a 9-pin connector for the external addition, such as mouse or fax/modem.

**External Monitor (CRT) Port**

This port is used for transmission of the display to an external monitor. Simultaneous display in LCD screen and external CRT monitor is available.

**PS/2 Type Port**

This port is used to connect with a PS/2 type keyboard or mouse.

Phone Jack

The phone jack is used to support the built-in modem. To use the function, attach a phone line to the jack and insert a modem card (optional) into the modem socket on the mainboard.

Figure 1-12

 **Left-Side View****PC Card Sockets**

There are two PC card sockets on the right side and left side. Two type II PCMCIA 3.3V/5V cards can be used to expand the system's capability. The sockets support Zoom Video Mode and CardBus. To eject the PC card, press the appropriate eject button.

2.5" Hard Disk Drive

The 2.5" hard disk drive is removable. It accepts any 2.5" hard disk drive with a height of 12.7mm or less. The system supports Master mode IDE and PIO mode 4/ATA-33 (Ultra DMA).

3.5" Floppy Disk Drive

The computer provides a built-in 3.5", 3-mode, 1.44MB floppy disk drive. To eject the disk, press the button on the top-right side. The floppy disk module can be replaced with a 12.7mm(h) LS-120 drive. (Refer to Chapter 2: Operation for more information).

Headphone Jack

Headphone and speakers can be attached to the system through this jack.

**Microphone-in Jack**

Use this jack to connect a microphone to the system.

Infrared

The system adopts infrared technology as the interface for simple, fast and convenient data exchange from the computer to an infrared-compatible device. The infrared port supports IrDA (HPSIR) 1.0 mode and Amplitude Shifted Keyed IR (ASKIR) mode. For further information, please refer to the manual of the wireless device you wish to connect on how to use the point-and-shoot operation.

Figure 1-13

Right-Side View

5.25" CD-ROM Drive

The 5.25" IDE CD-ROM module is designed to be removable. The eject button is located in the middle of the front cover of the CD-ROM drive. Pressing it will release the CD tray.

Ventilation

The computer vents were designed to help dissipate system's heat produced during normal operation. Do not block or obstruct vents while DeskNote™ is in use.

Figure 1-14

Chapter 2 : Operation

The EUROCOM 5100C DeskNote has many advanced features to help you with your computer work. This chapter describes each of the computer's hardware features and shows you how to use them.

Before you begin working with the internal components of the computer, remove the battery and disconnect the AC power adapter.

Make sure you wear an anti-static wrist strap to ground yourself before working with or repair the internal components. Static electricity may damage the components.

-  Upgrading Processor Module
-  Setting DIP Switch
-  Expanding Memory
-  Using Hard Disk Drive
-  Using Floppy Disk Drive
-  Using CD-ROM
-  Using PC Card Sockets
-  Using Hot Keys
-  Using Numeric Keypad
-  Using Power Management
-  Attaching Peripheral Devices

Upgrading Processor Module

The DeskNote supports Intel Celeron processor at 300MHz, 333MHz, 366MHz, 400MHz, and 433MHz Core frequencies.

The Intel Celeron processor provides good performance for applications running on advanced operating systems, such as Window 95/98, Window NT, and UNIX.

Replacing the Processor

1. Remove all the power sources (AC power and battery).
2. Turn the computer over.
3. Remove the CPU cover.
4. Remove the screws that fasten the heat sink mounted on the processor.
5. Carefully detach the processor from the mainboard (Figure 2-1).

Figure 2-1

Reinstalling Heat Sink

Reinstall the CPU in the reverse order of removal. Make sure that the heat sink cable is properly installed (Figure 2-2 & 2-3).

Figure 2-2

Figure 2-3

Expanding Memory

The system has two memory sockets for different RAM modules to expand the memory up to 256MB. The RAM modules should be 144-pin SODIMM (Small Outline Dual In-line Memory Module) type. The computer supports EDO, and SDRAM operation. The total memory size is automatically detected by the POST routines. To expand the memory, you have the following choice with different SDRAM combinations.

Bank 0 (64 Bits)	Bank 1 (64 Bits)	Power	Total Size
8	0	3.3V	8
8	8		16
16	8		24
32	0		32
16	16		32
32	16		48
64	8		72
64	16		80
32	32		64
64	32		96
128	0		128
64	64		128
128	8		136
128	16		144
128	32		160
128	64		192
128	128		256

Accessing the Memory Sockets

1. Turn the system power off.
2. Press the two keyboard latches to elevate the keyboard from its normal position (Figure 2-4).
3. Carefully lift the keyboard assembly out to expose the mainboard. Locate the memory sockets (Figure 2-6 & Figure 2-7).

Non-component area
(The edges of the memory module are the non-component area.)

Figure 2-6

Figure 2-7

Installing Memory Module

Follow the steps below to install the memory module:

1. Turn the system power off.
2. Press the two keyboard latches to elevate the keyboard from its normal position (Figure 2-4).
3. Carefully lift the keyboard assembly out to expose the mainboard. Locate the memory sockets (Figure 2-7).
4. Insert the memory module at a slight angle (45°) and fit its connectors into the socket firmly (Figure 2-8).

Note:

Insert Bank 0 first, then Bank 1.

5. Press the two edges of the memory module to make it locked into the place.
6. Reinstall the keyboard assembly.

Figure 2-8

Removing Memory Module

1. Turn the system power off.
2. Press the two keyboard latches to elevate the keyboard from its normal position (Figure 2-4).
3. Carefully lift the keyboard assembly out to expose the mainboard. Locate the memory sockets (Figure 2-7).
4. Gently pull the two latches outward on both ends of the module. The module will pop up (Figure 2-9).
5. Remove the memory module.
6. Reinstall the keyboard assembly.

Figure 2-9

Using Hard Disk Drive

The hard disk drive is mounted in a removable case and can be taken out to accommodate other 2.5" IDE hard disk drives with a height of 12.7mm. The system supports PIO mode 4, Master mode IDE, LBA mode and provides a high performance data transfer rate at speeds up to 33 Mbytes/second (ATA-33).

Removing

1. Turn the system power off.
2. Turn the computer over.
3. Locate the Hard Disk Drive latch.
4. Press the latch in the indicated direction and take the hard disk drive out of the computer (Figure 2-10).

Figure 2-10

Note:

When inserting the hard disk drive, insert it firmly into the computer. Make sure you feel the drive click into the position when it is seated properly.

Replacing Hard Disk Drive

The hard disk drive is contained in a case. To take the hard disk drive out of the case and replace with another one, you need to remove the two screws on each side of the case (Figure 2-11). The location of the two screws may be varied depending on different types of hard disk model. Gently disconnect the cable from the hard disk drive when taking it out of the case. Be careful not to bend any pins or crimp the cable.

Figure 2-11

Using Floppy Disk Drive

The computer is equipped with a removable 1.44MB, 3.5" floppy disk drive module. It is usually designated as drive A: by default and can be used as a boot device if properly set in SCU (please refer to Chapter 3: BIOS Utilities).

Inserting/Removing Diskettes

When using the floppy drive, always insert your floppy diskette label-side up (Figure 2-12). To remove your diskette, press the eject button on the top-right corner of the floppy drive.

Figure 2-12

Replacing Floppy Disk Drive

Note:

Before replacing floppy disk drive and CD-ROM module, you need to remove the cover between the two modules.

1. Turn the system power off.
2. Turn the computer over.
3. Locate the cover between the floppy disk drive and the CD-ROM module.
4. Remove the two screws to release the cover (Figure 2-13).
5. Locate the floppy disk drive latch.
6. Push the latch in the indicated direction and pull the floppy disk drive module out of the tray (Figure 2-14).
7. Insert the replacement module into the bay.

Figure 2-13

Figure 2-14

Using CD-ROM

The DeskNote computer comes standard with a removable 5.25" CD-ROM module. It is labeled drive D: and may be used as a boot device if properly set.

To insert a CD, press the **Eject Button** and place the CD into the **Disc Tray** with label-side facing up. Push the CD tray in and you are ready to start. The **Busy Indicator** will light up while data is being accessed or while an audio CD is playing. When the power is unexpectedly interrupted, insert an instrument such as a straightened paper clip into the **Emergency Eject** to eject the tray (Figure 2-15).

Figure 2-15

Removing CD-ROM Module

Note:

Before replacing floppy disk drive and CD-ROM module, you need to remove the cover between the two modules.

1. Turn the system power off.
2. Turn the computer over.
3. Locate the cover between the floppy disk drive and the CD-ROM module.
4. Remove the two screws to release the cover (Figure 2-13).
5. Locate the CD-ROM latch.
6. Push the latch in the indicated direction and pull the CD-ROM module out of the tray (Figure 2-16).
7. Insert the replacement module into the bay.

Figure 2-16

Loading Compact Discs

1. Turn on the power.
2. Press the CD-ROM eject button; the disc tray will pop out partially.
3. Pull the disc tray out.
4. Carefully load the CD into the disc tray with label-side facing up. Press it gently to ensure it fits into the place (Figure 2-17).
5. Push the tray into the computer.

Figure 2-17

Handling Compact Discs

Proper handling of your CDs will prevent them from being damaged and ensure the accessibility of data stored in them.

- Hold the CD by the edges; do not touch the surface of the disc.
- Use clean, soft, and dry cloth to remove dust or fingerprints.
- Do not use pen to write on the surface.
- Do not attach any paper or other materials to the surface of the disk.
- Do not store or place the CD in the high-temperature areas.
- Do not use benzene, thinners, or other cleaners to clean the CD.
- Do not bend the compact disc.
- Do not drop or subject the CDs to shock.

Using PC Card Sockets

The computer is equipped with two PC card sockets (previously referred to as PCMCIA). Both sockets support two 3.3V/5V type II PC cards or two 3.3V CardBus cards

The PC card sockets are located on the computer's right side and left side. The socket on left side is named socket A which supports Zoom Video Port.

Inserting PC Cards

1. Open the access door
2. Align the PC card with the slot and push it in firmly until it locks into the place (Figure 2-18 & 2-19).

Removing PC Cards

To remove a PC card, press the appropriate eject button to eject the card from its slot.

Figure 2-18

Figure 2-19

Using Hot Keys

Located on the bottom-left edge of the keyboard layout is a colored **Fn** key. The **Fn** key function allows you to change operational features instantly. When you use the following functions, press and hold the **Fn** key; then press the appropriate function key (Figure 2-20).

Hot Keys	System Features
Fn + F3	Expand LCD display.
Fn + F4	Control display top/center position.
Fn + F6	Toggle CRT/LCD/LCD+CRT/TV/CRT+TV.
Fn + F9	Decrease LCD brightness.
Fn + F10	Increase LCD brightness.
Fn + F11	Decrease audio volume.
Fn + F12	Increase audio volume.
Fn + Z	Turn audio mute on/off.
Fn + Esc	Put the system in a suspend state for power management.

Windows 95 Special Keys

The keyboard provides two keys that have special functions in Windows 95/98:

This key has the same functions as the secondary mouse does.

This key activates the Windows 95 Start menu.

Figure 2-20

Using Numeric Keypad

Your DeskNote features a 102-key keyboard with an integrated numeric keypad for easy numeric data input (Figure 2-21).

Figure 2-21

Using Power Management

The system provides you with various modes to manage its power consumption while maintaining system performance. Please refer to Chapter 3: BIOS Utilities, System Configuration Utility, Power Menu for more information.

Advanced Power Management (APM 1.2)

The system provides built-in Advanced Power Management (APM 1.2) support to reduce power consumption. APM function varies depending on the operation system you are using. **Some operation systems do not support APM, such as Windows NT, and therefore, cannot take advantage of the system's capabilities in this area.**

Advanced Configuration and Power Interface (ACPI)

The ACPI interface gives the operation system (OS) direct control over the power management and Plug and Play functions of a computer. The operation system can perform the functions covered by the ACPI specification, such as system power management, device power management, and thermal management.

Global Standby

In Global Standby mode, the CPU clock will be stopped and most controllable peripheral devices will be power off. If the idle timer expires before any system activity is detected, the system will change from Standby mode into Suspend mode.

Hard Disk Standby

The system will turn off the computer's hard disk drive motor if it has not been accessed after a specified period of time. The motor will be turned back on if the system attempts to read or write data to it.

Suspend and Resume

When at extremely low power, you can enter suspend mode to save power. In suspend mode, all tasks are stopped and stored in memory to save power. The system features two levels of suspend mode: Powered-On-Suspend (POS) mode and Suspend-To-Disk (STD) mode.

Another useful feature is resume mode. This feature allows you to turn the computer's power off without exiting your software application. When you turn the power on again, you can resume work where you left off, because the screen display is restored as you left it. This saves time and battery power.

Caution: Do not enter suspend mode when you are

1. Accessing any of the disk drives, such as HDD, FDD or CD-ROM drives.
2. Using the audio features or playing back video.
3. Playing a DOS game.

Powered On Suspend (POS)

Of the suspend modes, Powered-On-Suspend saves the least amount of power. However, it takes the shortest time to return to full operation.

Resume from POS Mode

The system can resume from Powered-On-Suspend mode by:

- Alarm resume (month/day/hour/minute)
- Modem ring
- Pressing any keyboard key.
- Pressing the power button (if configured as Suspend/Resume function under SCU)
- Opening the display lid (only if the suspend mode is initiated by closing the display lid)

Suspend To Disk (STD)

Suspend to Disk is a 0-volt suspend mode for system power management. STD mode saves the maximum power but takes the longest time to return to full operation.

1. Use your operation system's FDISK program to delete all partitions of the hard disk if any already exist on the target drive.
2. Boot the system and run the 0VMAKFIL.EXE Utility to create the Suspend to Disk partition on the hard disk. The size of Suspend to Disk partition will be the installed DRAM (n) plus 4MB integrated video RAM.

:>0VMAKFIL -Pn

For example, if the system DRAM is 32MB, 0VMAKFIL will create a partition size of approximately 36MB.

:>0VMAKFIL -P32

Resume from STD Mode

The system will resume from Suspend-To-Disk mode by:

- Power back on
- Alarm resume (month/day/hour/minute)

Suspend To RAM (STR)

Suspend-To-RAM mode is the medium level of system power management.

Resume from STR Mode

The system will resume from Suspend-To RAM mode by:

- Alarm resume (month/day/hour/minute)
- Modem ring
- Pressing the power button (if configured as Suspend/Resume function under SCU)
- Opening the display lid (only if the suspend mode is initiated by closing the display lid)

Attaching Peripheral Devices

To extend the computer's functions, you can attach the following peripheral devices to the computer through the ports or jacks on the rear panel of computer.

Attaching a Security Lock

The security lock is equipped to protect your computer from being stolen. To install the security lock, wrap the cable around a desk or other immovable object, then insert the locking device into the connector (Figure 2-22).

Figure 2-22

Attaching a Parallel Printer

You may connect any standard Centronics parallel printer to your computer through the parallel port.

1. Turn the system power off.
2. Connect the cable to the parallel port on the rear of the computer.
3. Tighten the screws that fasten the cable to the parallel port (Figure 2-23).
4. Insert the other end of the cable to the printer's connector. Fasten the cable's connector.
5. Turn on the printer and computer.

In addition, you also need to install the manufacturer-supplied driver for the printer. Refer to the device's user's guide for more information. If the connected printer supports EPP (Enhanced Parallel Port) or ECP (Extended Capabilities Port) mode, please enter System Configuration Utility (SCU) to configure the required setting.

Figure 2-23

Attaching a TV Set

The S-Video jack on the rear panel of the computer is used for transmitting video signals to a TV set. You may need to select the video standard for video display. Enter the System Configuration Utility (SCU), Components Menu to specify the appropriate TV mode. Simultaneous display on external monitor (CRT) and TV is available. You can enter the SCU to select the appropriate parameters or use the **Fn + F6** keys (refer to Chapter 2, Using Hot Keys).

Attach the TV set as shown below (Figure 2-24).

Figure 2-24

Attaching a USB-compatible Device

The computer provides a USB port for the connection of a USB-compatible keyboard, mouse, or other devices. Attach the device as shown below (Figure 2-25).

Figure 2-25

Attaching a Serial Mouse

The serial port features a 9-pin connector. You can connect any serial device such as a mouse to this port.

1. Turn the system power off.
2. Connect the cable to the serial port on the rear of the computer.
3. Tighten the screws that fasten the cable to the serial port (Figure 2-26).
4. Turn on the computer.

In addition, you may need to install the manufacturer-supplied driver for the serial mouse. Refer to the device's user's guide for more information.

Figure 2-26

Attaching an External Monitor (CRT)

The computer is capable of displaying not only on the LCD, but also on the XGA compatible displays attached to the computer. Information can be displayed on both the LCD and the external monitor simultaneously. Enter the System Configuration Utility (SCU) to select the appropriate parameters or use the **Fn + F6** keys (refer to Chapter 2, Using Hot Keys).

1. Turn the system power off.
2. Connect the cable to the CRT port on the rear of the computer.
3. Tighten the screws that fasten the cable to the CRT port (Figure 2-27).
4. Insert the other end of the cable to the external monitor.
5. Turn on the computer.

Figure 2-27

Attaching a PS/2 Keyboard or Mouse

The computer can be operated with a PS/2 keyboard or mouse attached by means of the PS/2 transfer cable. Attach the external keyboard or mouse as shown below (Figure 2-28).

Both PS/2 type ports on the rear panel of the computer can be used for the connection of a PS/2 keyboard and mouse.

Figure 2-28

Chapter 3 : BIOS Utilities

This chapter provides you with the information of Power On Self Test (POST) and shows you how to configure the system parameters using the System Configuration Utility (SCU).

-  Power on Self Test (POST)
 - POST Message: Normal Operation
 - POST Message: Error Detected
-  System Configuration Utility (SCU)
 - Information in the SCU
 - Initiating the SCU
 - Working with the Menu Bar of the SCU
 - Working with the Pull-Down Menu of the SCU
 - Features of the SCU
 - Startup Menu
 - Memory Menu
 - Disks Menu
 - Components Menu
 - Power Menu
 - Exit Menu

Power on Self Test (POST)

The system BIOS (Basic Input/Output System) performs a series of Power On Self Test (POST) on system memory and key computer components every time the computer is turned on. If an error exists, the POST routine may halt execution (depending on the problem). If no error exists, the POST will initialize BIOS configuration, then boots the operating system.

POST Message: Normal Operation

You will see the following message if no error exists after the POST is performed.

```

System Configuration Utility

The System Configuration Utility (SCU) is a ROM-based configuration utility that displays the system's configuration status and provides users with a tool to set their system parameters. The settings are stored in non-volatile battery-backed CMOS RAM which saves the information even when the power is turned off, and retains it when the system is turned on again.

Information in the System Configuration Utility

The following shows the system settings that may be changed within the System Configuration Utility.

Menu Bar Items	Pull-down Menu Items
Startup	Date and Time, Fast Boot, Boot Device, Display, Enable Battery Low Beep, Enable LCD expand Mode, Enable Power On Beep, Enable PNP OS Support, Boot Password, SCU Password.
Memory	Cache Systems.
Disks	Enable LS120/ZIP 100 Drive, Diskette Drives, IDE Settings.
Components	COM Ports, LPT Port, PS/2 Mouse Port, Microsoft IntelliMouse Support, Keyboard Numlock, Keyboard Repeat, TV Mode
Power	Enable Power Saving, Low Power Saving, Medium Power Saving, High Power Saving, Customize, Suspend Controls, Resume Timer, Enable MODEM Ring Resume, Enable Battery Low Suspend, Advance CPU Controls.
Exit	Save and Exit, Exit (No Save), Default Settings, Restore Settings, Version Info.

Initiating the System Configuration Utility

The System Configuration Utility (SCU) can be accessed when pressing the **Ctrl**, **Alt**, and **S** keys simultaneously.

<CTRL-ALT-S> to enter System Configuration Utility

The above message only lasts seconds. If you miss it, the computer will initiate the boot process. You must reboot the system and try again within the time limit if you want to enter the System Configuration Utility.

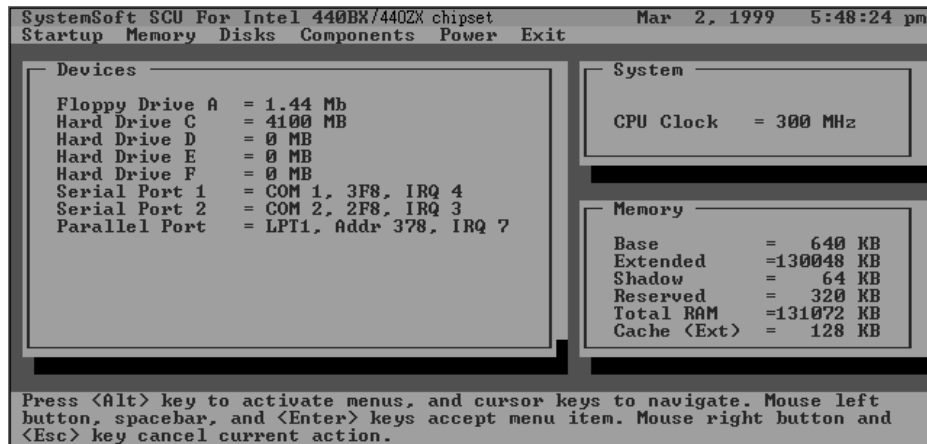

Figure 3-1
System Configuration Utility (SCU)

Working with the Menu Bar

After entering the SCU, you may use the following keys to work with the menu bar.

Keys	Action	Description
Alt	Activate menus	Activate the System Configuration Utility.
Left arrow (←) Right arrow (→)	Select menu bar item.	Move to a menu bar item on the left. Move to a menu bar item on the right.
The highlighted letter key		Move to the corresponding menu bar item.
Mouse left button Spacebar Enter	Accept menu bar item	Enter the selected menu bar item to configure settings.
Mouse right button Esc	Cancel current action	Undo the current command.

Working with the Pull-down Menu

When the desired menu bar item is highlighted, press the **Enter** key to enter the pull-down menu for values setting. You may use the following keys to work with the pull-down menu.

Keys	Action	Description
Down arrow (↓) Up arrow (↑)	Select pull-down menu item.	Move to the next pull-down menu item.
The highlighted letter key		Move to the previous pull-down menu item.
Tab	Select a control	Move to the corresponding pull-down menu item.
Tab	Select a control	Move between the options.
Down/Up arrows (↓)(↑)	Change values	Modify the settings.
Spacebar	Accept entries	Enable/disable the specified function. When a check mark (√) appears, the function is on.
Enter		Choose <OK> from a list of options.
Esc	Reject entries	Undo the current setting.
Enter		Choose <Cancel> from a list of options.
Alt	Activate accelerators	Initiate all the highlighted letters corresponding to their respective options.
Esc	Quit	Press the Esc key to close the pull-down menu.

Features of the System Configuration Utility

Startup Menu

Item	Setting/Option	Function
Date and Time	Day/Month/Year Hour/Minute/Second	Set the current date and time.
Fast Boot	Enable	Initialize and quickly boot the system in a few seconds by skipping certain diagnostic tests.
	Disable	Disable the above.
Boot Device	Diskette A	Specify where the system boots from.
	Hard Disk C	
	CD-ROM Drive	
Display	LCD	Activate the system's LCD panel.
	CRT	Activate an external monitor.
	LCD + CRT	Activate both the LCD and the CRT.
	TV	Activate an external TV.
	CRT + TV	Activate both the CRT and the TV.
Enable Battery Low Beep	Enable	The system emits a series of warning beeps sound when the battery power becomes low.
	Disable	Disable the above.
Enable LCD Expand Mode	Enable	Stretch the display to fill the entire viewing area of the LCD panel.
	Disable	Disable the above.

Item	Setting/Option	Function
Enable Power on Beep	Enable	Enable or disable Power on Beep.
	Disable	
Enable PNP OS Support	Enable	Enable or disable PNP OS Support.
	Disable	
Boot Password	Enter old Power-On Password	Set password for booting computer. Users are authorized to start the system after entering correct password.
	Enter new Power-On Password	
	Verify new Power-On Password	
	Enable Password to Power-On	
SCU Password	Enter old Setup Password	Set password for modifying SCU. Users are authorized to change the SCU setting after entering correct password.
	Enter new Setup Password	
	Verify new Setup Password	
	Enable Setup Password

Startup Menu

Memory Menu

Item	Setting/Option	Function	
Cache Systems	L1 Cache	Disabled	Disable the processor's internal cache.
		Write Back	Enable the Processor's internal write-back cache.
	L2 Cache	Disabled	Disable the L2 cache controller.
		Write Back	Enable the LS write-back cache.
	BIOS Shadow	Cached	The process of <i>shadowing</i> copies instructions from system BIOS into RAM to improve system performance.
		Not Cached	Disable the above.
Video Shadow	Cached	The process of <i>shadowing</i> copies instructions from video BIOS into RAM to improve system performance.	
	Not Cached	Disable the above.

Memory Menu

Disks Menu

Item	Setting/Option	Function	
Diskette Drives	Drive A	None	Specify the drive types for the diskette drive A.
		1.44 Mb	
		2.88 Mb	
IDE Settings	Primary HDD	Drive Enabled	Enable enhanced IDE settings.
		PIO Mode	
	CD-ROM / DVD-ROM	Drive Enabled	
		PIO Mode	
	LS120 /ZIP/ 2 nd HDD	Drive Enabled	
		PIO Mode	
Enable LS120/ ZIP100 Drive	Enable	Enable the LS120 drive.	
	Disable	Disable the LS 120 drive.	

Figure 3-4
Disks Menu

Components Menu

Item	Setting/Option	Function	
COM Ports	COM A I/O Settings	None	Specify the COM A configuration. (COM3 & COM4 Only for DOS mode and Non-PnP OS.)
		COM1, 3F8, IRQ4	
		COM2, 2F8, IRQ3	
		COM3, 3E8, IRQ10	
	COM B I/O Settings	None	Specify the COM B configuration. (COM3 & COM4 Only for DOS mode and Non-PnP OS.)
		COM1, 3F8, IRQ4	
		COM2, 2F8, IRQ3	
		COM3, 3E8, IRQ10	
	Mode Setting for COM B	Normal (16550)	Define the COM B hardware.
		IrDA (HPSIR)	
		ASK IR	
		FAST IR	
	DMA Setting for Fast IR	DMA 0	Specify the Fast IR DMA configuration.
		DMA 1	
		DMA 3	
	LPT Port	Port Address	None
LPT1, Addr 378, IRQ7			
LPT2, Addr 278, IRQ5			
LPT3, Addr 3BC, IRQ7			
Port Definition		Standard AT (Centronics)	
		Bi-directional (PS-2)	
		Enhanced Parallel (EPP)	
		Extended Capabilities (ECP)	
DMA Setting For ECP Mode		DMA 1	Specify the ECP DMA configuration.
		DMA 3	
EPP Type	EPP 1.9	Specify the EPP type.	

Item	Setting/Option		Function
PS/2 Mouse Port	Enable		Enable the system's trackpad or an external PS/2 mouse.
	Disable		Disable the trackpad or PS/2 mouse if an external mouse is connected to COM A port.
Microsoft Intellimouse Support	Enable		Support PS/2 mouse with the wheel button.
	Disable		Do not support PS/2 mouse with the wheel button.
Keyboard Numlock	Enable		Specify whether Num Lock is on or off at system boot time.
	Disable		
Keyboard Repeat	Key Repeat Rate	2 cps	Define the rate (characters per second) at which the keyboard repeats while a key is depressed.
		6 cps	
		10 cps	
		15 cps	
		20 cps	
	Key Delay	30 cps	Specify the amount of time (second) that will pass after a key is depressed before the key starts to repeat.
		1/4 sec	
		1/2 sec	
TV Mode	3/4 sec		Specify the TV mode selection
	1 sec		
	Japanese NTSC		
	US NTSC		
	PAL		

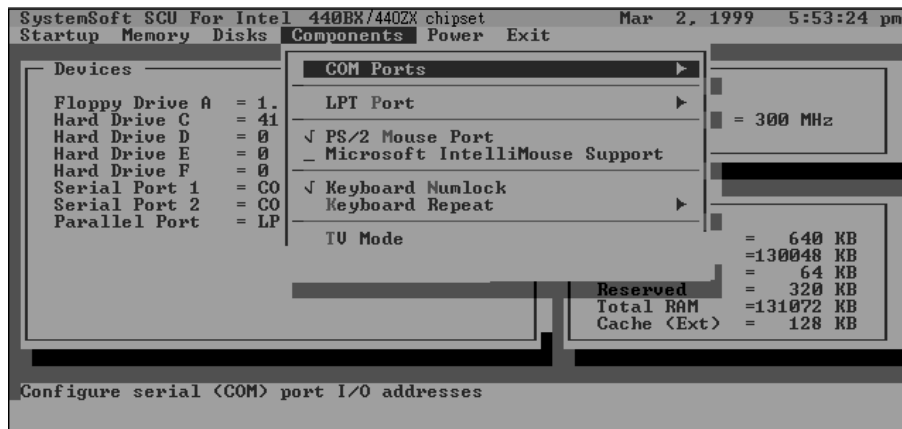

Figure 3-5
Components Menu

Power Menu

Item	Setting/Option		Function
Enable Power Saving	Enable		Enable/Disable all power saving features.
	Disable		
Low Power Saving	Enable		Enable/Disable the power saving to its lowest which results in max. performance but shortest battery life.
	Disable		
Medium Power Saving	Enable		Enable/Disable the power saving to its medium which results in both moderate performance and battery life.
	Disable		
High Power Saving	Enable		Enable/Disable the power saving to its highest which results in min. performance but longest battery life.
	Disable		
Customize	Disk Standby	5 sec	The hard disk will be put on standby if it is not accessed within the specified period. Hard disk power will be restored when the disk drive is accessed again.
		10 sec	
		15 sec	
		20 sec	
		30 sec	
		Always on	
	Global Timeout	1 min	The system power will be reduced if the system has been idle over the specified period. System power will be restored when any system activity is detected.
		2 min	
		4 min	
		6 min	
		8 min	
		12 min	
		16 min	
		Always on	

Item	Setting/Option		Function
Suspend Controls	Power Button Function	Power On/Off	The power button is switched to turn the system on or off.
		Suspend/Resume	The power button acts as a suspend/resume button for switching the system between a working state and the suspend mode.
		Pressing the power button for more than four seconds will generate a power button over-ride event to switch the system from a working state to the Soft-Off state.	
	Suspend Type	Suspend to Disk	Specify the suspend mode for power management.
		Suspend to RAM	
		Powered on Suspend	
	Suspend Timeout	1 min	If the system has been idle for the specified period, the system will enter user-defined suspend.
		5 min	
		10 min	
		20 min	
30 min			
Never			
Resume Timer	Alarm Resume	Enable	Resume the system from the configured suspend mode when resume alarm timer expires.
		Disable	
Resume Month/Day/Hour/Minute	The system will resume at the specified time (month, day, hour and minute).		

Item	Setting/Option	Function
Enable MODEM Ring Resume	Enable	Resume the system from STR or POS mode when a modem ring is detected (which modem should be connected to the serial port).
	Disable	Disable the above.
Enable Battery Low Suspend	Enable	Automatically suspend the system to disk upon a low battery condition.
	Disable	Disable the above.
Advance CPU Controls	Clock Control Mechanism	Specify the type of Processor Clock Control.
		Doze Mode

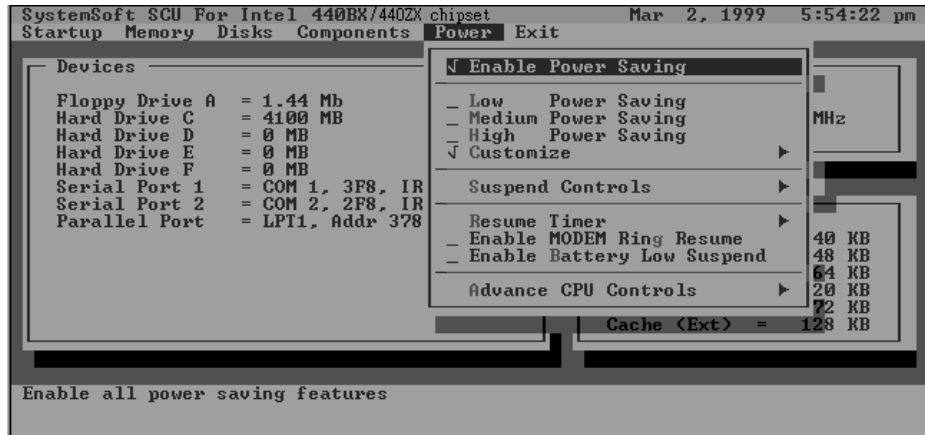

Figure 3-6
Power Menu

Exit Menu

Item	Function
Save and Exit	Save the current settings and reboot the system.
Exit (No Save)	Exit without saving any current changes.
Default Settings	Restore the default settings (the original ones found in ROM).
Restore Settings	Restore the current setup settings to the original custom ones.
Version Info	Show current BIOS version information.

Exit Menu

Appendix A: Specifications

This following are the features and specifications of the DeskNote computer.

Processor

- Intel® Celeron™ processors 300A/333/366/400/433 MHz
- Intel® Mobile Pentium® II / Celeron™ processors /333/366/400/433 MHz

Memory

- Two 144pins SODIMM sockets
- Supports EDO/Sync DRAM SODIMM (3.3V)
- 8/16/32/64/128 MB module (optional)
- Expendable memory up to 256MB.

System BIOS

- 256KB Flash ROM
- SystemSoft, Plug and Play 1.0a, ACPI (1.0)

Display

- SVGA flat panel 12.1" TFT
- S3 ViRGE MX+ AGP 1X
- 64-bit hardware 2D/3D Accelerator Graphics Engine
- TV-out with Marco Vision® V7.1 anti-copy technology
- 4MB display memory SGRAM type
- CRT resolution up to 1280x1024x16M
- DuoView™ display capability under Windows 98
- Support Zoomed Video Port
- Support Software MPEG II playback (option).

Storage

- 3.5" 3-mode FDD/12.7mm(h) LS-120
 - DVD-ROM (12.7mm)/CD-ROM (24X speed, 12.7mmH or 9.5mmH)/CD-RW (12.7mm)
 - 2.5" 12.7mm(h) HDD, support LBA mode
 - Support Master mode IDE, PIO mode 4/ATA-33 (Ultra DMA)
-

 **Audio**

- 3D stereo sound system
- Compatible Sound-Blaster PRO™ version 3.01
- IIS interface for external ZV port or MPEG audio
- Built-in microphone
- Built-in 2 speakers
- Software Wavetable
- FM music synthesizer 16 bits stereo sound system

 **PC Card Sockets**

- Two type II (PCI) PCMCIA 3.3V/5V sockets
- Support Zoom Video Port (Socket A)/CardBus (PC Card95)

 **Interface**

- Built-in trackpad (PS/2)
- One USB port
- One serial port
- One parallel port (LPT1), support ECP/EPP 1.7a and 1.9
- Infrared file transfer, IrDA 1.0/ASKIR
- External CRT monitor
- One S-Video jack for TV output
- One External keyboard/mouse (PS/2 type) port
- One headphone jack
- One microphone jack
- One RJ-11 jack for Plug & Play Modem Accessory (option)
- DC-in jack

 **Communication**

- Wireless Infrared transfer, IrDA 1.0 compliant
- 56K Plug & Play Modem v.90 compliant (option)

 **Power Management**

- Support APM v1.2
- Support ACPI v1.0
- Soft Off by system Power button
- Support suspend to disk
- Battery low suspend
- Resume from alarm time
- Resume from modem ring (COM port only)

 **Power**

- Full range AC adapter – AC in 100-240V, 47-63Hz
- Support one removable Ni-MH/Li-Ion Battery

 **Size & Weight**

- 280mm(w)x240mm(d)x39.5mm(h)
- 2.8kg (with Lithium-Ion battery)

 **Keyboard**

- 84 keys Win95 keyboard include numeric keypad.

 **Environment**

- Temperature:
Operating: 5°C~35°C, Non-Operating: 20°C~60°C
- Humidity
Operating: 20%~80%, Non-Operating: 10%~90%

 **Optional**

- Ni-MH Battery
 - Smart Li-Ion Battery
 - DVD-ROM Drive Kit
 - MPEG playback cable
 - Car Adapter
 - Internal 56K v.90 Win-Modem
-
