## Warning and Disclaimer

This manual is designed to provide information about the Pentium<sup>®</sup> III, Cyrix<sup>®</sup>III system board. Meticulous efforts have been made to make this manual as accurate as possible, but no warranty or fitness is implied. All the information is provided on an 'as is' basis. The author and his corresponding publishing company shall have neither liability nor responsibility to any person or entity with respect to any loss or damages arising from the information contained in this manual or from the use of the system board that accompanies it.

Information contained in this manual is subject to change without notice. The manufacturer of the system board will not be held responsible for technical or editorial omissions made herein, nor for the incidental or consequential damages resulting from its furnishing, performance, functionality or use. Subsequent changes to this manual will be incorporated into the next edition. We welcome any suggestion regarding this manual or our computer products.

Importa	nt Warnings:	
STO	WARNING: NEVER run the processor without the heatsink pro attached. This will damage the processor within SECONDS. Als Pentium Heatsinks, these will NOT fit and do NOT provide adec	o do NOT try to use
STC	WARNING: Make sure your power supply can deliver the power we recommend AT LEAST a 250W power supply. Even better, go supply especially when using many peripherals	

# **Chapter 1** Introduction

Thank you for purchasing this high quality motherboard, we are confident that you will be able to use this motherboard to your full satisfaction. This manual is divided into 6 main sections, as described below:

#### \_\_\_\_

#### Introduction

The introduction contains information on the main specifications for the 6B810/ 810CD/ 810E motherboard, the package contents and cautionary notes.

#### **Hardware Installation**

The Hardware Installation section is the most important in the manual. It describes in detail how to set the motherboard up for operation. Read all information and follow all steps, especially if you are a new user.

#### **Software Installation**

The software section describes the drivers that need be installed to make your OS operates properly. The drivers are provided on the driver CD.

### **BIOS Setup**

Information on how to enter the BIOS setup and change settings is given here. In addition all individual BIOS items are described. Although some BIOS setting information is given in the hardware installation section where appropriate, refer to the BIOS Setup Section for details.

## **Appendix**

Provides useful information

Q & A

## 1-1 Main Specifications

■ PCB board size: 22.0cm x 24.0cm

■ PCB layer: 4 layers

### ■ Supported CPUs

Can take current PPGA or FC-PGA Cippermine Socket-370 PIII 66/100MHz (133MHz with i810E only) & Celeron CPUs.

#### **■** Chipset Northbridge

The Intel® i810E chipset uses a hub architecture with theGMCH as the host bridge hub and the 82801AA I/O Controller Hub (ICH) as the I/O hub. The ICH is a highly integrated multifunctional I/O Controller Hub that provides the interface to the PCI Bus and integrates many of the functions needed in today's PC platforms. The GMCH and ICH communicate over a dedicated hub interface. It supports a 100MHz SDRAM interface. It was designed especially to deliver enhanced Intel Pentium<sup>TM</sup> III / Celeron<sup>TM</sup> or VIA Cyrix® III processors system performance. The on-chip 3D VGA fraphics function with shared 4MB 3D texture memory (or called display cache) (shared 4MB display cache optional) which allows this main board to run any 3D graphics program without adding any Extra VGA card

#### **■** Chipset Southbridge

The Intel® 82801AA (ICH) and Intel® 80801AB (ICH0) support PCI Rev 2.2 Specification at 33MHz. The ICH supports Ultra ATA/ 66 (The ICH0 support Ultra ATA/ 33) mode, which allows burst mode data transfer rates of up to 66MB/sec; AC97 audio (Using the onboard ALC100 Audio Codec); USB controller with root hub and four function ports.

#### ■ Memory

The 6B810/810CD/810E comes equipped with two Dual Inline Memory Module (DIMM) sockets to support Intel PC100/PC133 (with i810E only)-compliant (8, 16, 32, 64, 128, or 256MB) DIMM modules up to 256MB.

#### ■ PCI Expansion Slots

With three 32-bit PCI (Rev. 2.2) expansion slots, which can support Bus Master PCI cards, such as LAN or Video-grabber cards (PCI supports up to 133MB/s maximum throughput), the 6B810/810CD/810E motherboard is ready for the most demanding applications.

#### ■ AMR Slot

An Audio Modem Riser (AMR) slot also is supported, a very affordable audio and/ or modem riser card can be used in combination with this slot.

#### **■** USB interface

With support for up to 2 USB ports, two on-board, the  $6B810/\ 810CD/\ 810E$  provides ample USB expansion room.

#### **■** IDE interface

The 6B810/810CD/810E comes with an onboard PCI Bus Master IDE controller with two connectors that support four ATA66/33 devices on two channels. Supports UDMA/66, UDMA/33, PIO Modes 3 & 4 and Bus Master IDE DMA Mode 2, and Enhanced IDE devices, such as CD-R/RW, DVD-ROM, CD-ROM, Tape Backup and LS-120 drives.

#### ■ Super Multi-I/O

This functionality is integrated into the southbridge of the chipset. It provides two high-speed UART compatible serial ports and one parallel port with EPP and ECP capabilities.

### ■ Infrared (IrDA) Connector

This functionality is also integrated into the southbridge of the chipset. The IrDA connector supports an optional IR remote control device for wireless interfacing with external peripherals, personal gadgets, or an optional remote controller.

# 1-2 Other Features

## ■ System BIOS

The 6B810/810CD/810E comes with a 2MB BIOS that provides CPU/SDRAM frequency, boot block write protection, and HD/SCSI/CD/Floppy boot selection. DMI is also supported through BIOS, which allows hardware to communicate within a standard protocol creating a higher level of compatibility.

## 1-3 Notice of Hardware Installation

Before hardware installation, make sure you have checked the following things.

#### A. Check the package

If any of these items is missing or damaged, contact the dealer from whom you purchase. Leave this main board in its original package until you are ready to install it. In the package, there are:

- → The 6B810/810CD/810E Motherboard
- **→** 1 Manual
- → 1 Driver Installation CD-ROM
- → 1 IDE ATA 66/100 Flat-Cable
- → 1 Floppy Disk Drive Flat-Cable

## B. Make sure power is off.

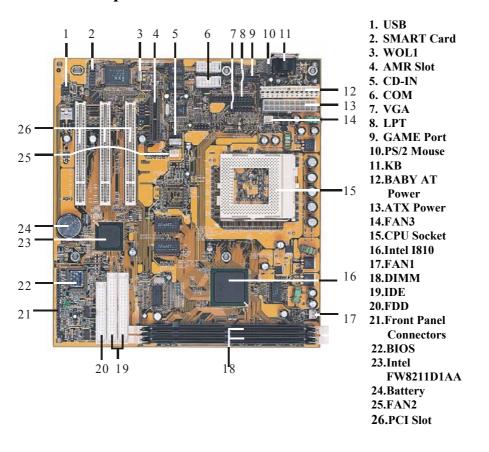

During hardware installation, be sure that there is no power connected during this period.

## C. Avoid ESD (Electrical Static Discharge.)

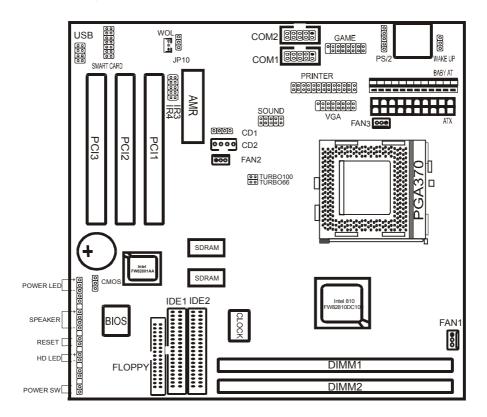

While installing the main board, wear a grounded wristband or ankle strap to avoid ESD (Electrical Static Discharge).

# **Chapter 2 Installation**

# 2-1 Component Locations

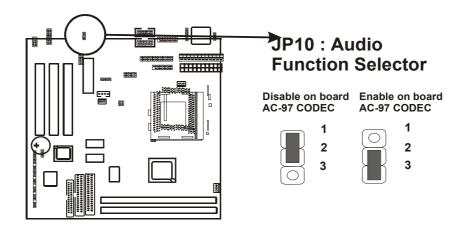

# 2-2 Layout Reference

# 2-3 Jumper Setting

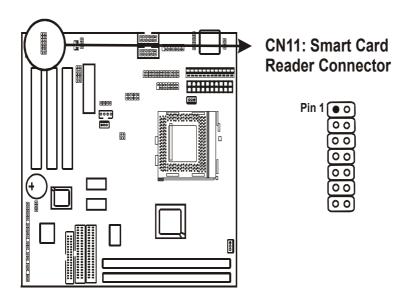

## 2-3-1 JP10: Audio Function Selector

JP10 is a 3-pin jumper to enable/disable on board audio function. Set "1-2" to disable on board audio function and use AMR card installed on slot, set "2-3" to enable on board audio function and use MR card installed on slot.

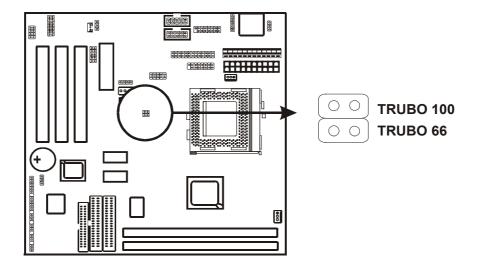

# 2-3-2 CN11: Smart Card Reader Connector (Optional)

The Smart Card is capable of providing secured storage facilities for sensitive personal information (such as Private keys, Account numbers, Passwords, Medical information, etc...). The Smart Card Reader can be used for a broad range of application in GSM, ID, pay TV, banking, ... and so forth.

## 2-3-3 Turbo 66/ Turbo 100 Selection

Turbo  $66 \, / \, 100$  selector allows user to overclock  $66 \, \text{MHz}$  Front side bus CPU to  $100 \, \text{MHz}$  FSB.

 The manufacturer shall have neither liability nor responsibility to any persion of entity with respect to any loss or damager arising by users' overclocking.

## 2-4 CPU Installation

The first step in the installation of your CPU is the insertion of the CPU into the 370 pins CPU socket. Please follow the steps as outlined below carefully to avoid damage to the CPU.

#### **Avoid Static Electricity**

The Intel PIII and Celeron processors and your motherboard contain sensitive electronic components that can be easily damaged by static electricity. We recommend that you leave the processor in its original packaging until you are ready to install it. You should only touch the edges of the processor, NEVER touch the processor pins to avoid static discharge.

First take a moment to inspect your CPU for obvious damage due to shipping or handling. Be sure that no noticeable damage exists before proceeding. You should have the following items:

□ 1 Intel PIII or Celeron processor.

 $\square$  1 good heatsink and fan assembly.

## Step 1

The following figure shows the processor socket. Note that the release lever on the right side of the socket is down and latched. This position is used to lock the processor in place. The lever must be raised to install the processor. To do this, first push the lever sideways to unlatch it, then raise it all the way up (approximately 90 degrees).

## Step 2

The processor pin array at the top two corners is angled and has no pins in the corners. Notice that at the top of the socket on the motherboard (near where it says "Socket 370") the corners also do not have positions for pins. The processor must be positioned so the pins match up properly. When you do that, the corner of processor that is cut off will be positioned next to the release pivot.

It should take no force to install the processor, this is a zero insertion force (ZIF) socket. If it takes any force you are doing something wrong. Check the pin alignment and also make sure the release lever is raised up completely.

After placing the CPU lower the release lever to lock the processor in place.

Now with the processor properly installed, you can proceed to install the heatsink. It is important to note that If you have never installed a heatsink on an Intel PIII or Celeron processor before it may be difficult. We recommend you do a dry run a few times before doing the final installation. To allow you to do this read the following instructions. Do not remove the film on the thermally conductive compound until you are ready to do the final installation.

**WARNING:** Never run the processor without the heatsink properly and firmly attached.

### Step3

The picture below shows the bottom of the heatsink. Notice the step in the heatsink surface, this portion fits over the top of the socket, where the legend "Socket 370" is molded into the plastic. The heatsink must be mounted with this step above the top of the socket or the heatsink will not be touching the processor properly.

The next picture shows the removal of the plastic film from the thermally conductive compound. The thermal compound is a thin layer of material that increases the efficiency of the heatsink by filling microscopic surface voids in the processor or heatsink surface with a thermally conductive material. Please do not remove the plastic film until you have practiced installing the heatsink and mounting the clips on the socket. It can take a few tries to get used to doing this.

The following picture shows a side view of the heatsink with the retaining clip at the bottom of the heatsink. Make sure this retaining clip is at the bottom of the heatsink before trying to install it.

The following picture shows the non-moveable end of the heatsink retaining clip installed on the lug at the bottom of the processor socket. This end of the clip simply slides over the lug when you tilt the heatsink / fan assembly towards the lug.

Now lock the locking clip for the retaining strap over the lug at the other (pivot end) of the processor socket. This is an easy procedure after you do it a few times, but initially it will require you to use a finger on one hand to push the latch down and use your other hand to push the latch in. This is the part you need to practice to install the clip properly. When you are holding the heatsink, make sure you do apply pressure to the fan. You could damage it and cause thermal failure of the processor.

**WARNING:** Be careful not to scrape the motherboard during the mounting of the fan or else damage may occur to the motherboard.

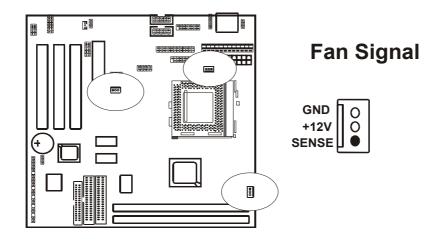

Now connect the wire from the heatsink fan to the CPU FAN connector on the motherboard. This connector is keyed and can only be installed one way. If you use a heatsink assembly that has two cooling fans, connect one to CPU FAN and the other to FAN1 . For more information on the FAN connectors, refer to the FAN connector section later in this section.

## 2-4-1 CPU and System Cooling

Any attempt to operate the Intel PIII Processor without a suitable cooling solution will result in permanent damage to the processor and potentially other components within the system.

### **FAN Headers**

Your 6B810/ 810CD/ 810E allows the use of in all 3 FANs. Of these 3 FANs, 1 can be used by the CPU Heatsink assembly. The other 2 FAN Headers allow connection of a Chassis Fan and a Power Supply FAN respectively. For a the location of the FAN connectors, refer to the following picture:

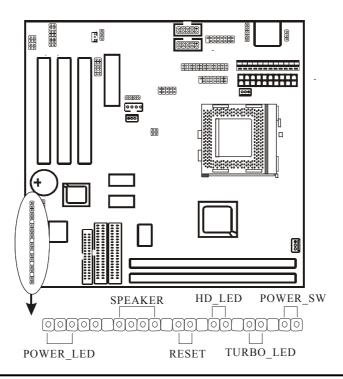

## 2-5 Connectors

There are many connectors on this main board. Refer to the following pages for details.

## 2-5-1 Front Panel

*Front panel* has connectors as "PW-LED," "PW-SW," "SPEAKER," "RESET," "HD-LED," "TRUBO-LED." Please refer the details as below.

Intel 810 Main Board

**RESET connector** is a 2 -pin keyed Berg strip, connected to the push button reset switch on the case front panel. Shorting both pin 1 & pin 2 can reset the system, which is similar to the power off and then on again.

**PW-BT** with a 2-pin Berg strip on case front panel indicates the current power status of system. It is used to connect to the Power Button on the front panel of the case (if there is).

**HD-LED** (Hard Disk activity LED connector) is a 2-pin keyed Berg strip. It is used to connect to front panel Hard Disk LED. This LED will light up whenever one of your IDE devices is being accessed.

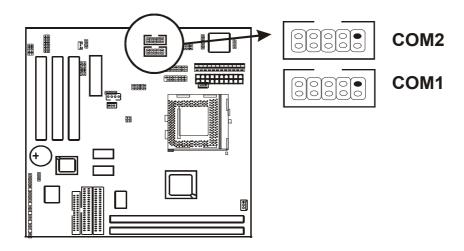

**SPEAKER** is a 4-pin keyed Berg strip. This speaker connector is for the internal case speaker. This speaker will enable the BIOS to give spoken messages in case of boot up trouble. The BIOS been codes also use this speaker. For Games and Music this speaker will not be used, but rather the back panel line-out connector.

**PW-LED** is a 3-pin connector. It is used to connect to the LED on the case front panel. The LED shows the status of the power.

## 2-5-2 Back Panel Connectors

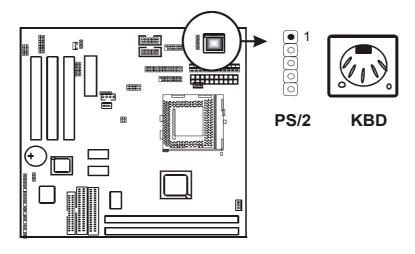

### COM1 & COM2

**The onboard serial port 1 and port 2** are the 9-pin D-subminiature male connector COM1 and COM2. COM1 and COM2 can be disabled in BIOS setup. Please refer to Chapter 3 "Integrated Peripherals" for more information.

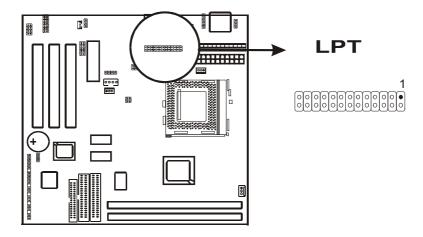

## **KBD/PS2 MOUSE**

The onboard PS/2 keyboard and mouse connectors are 5-pin Mini-Din connectors.

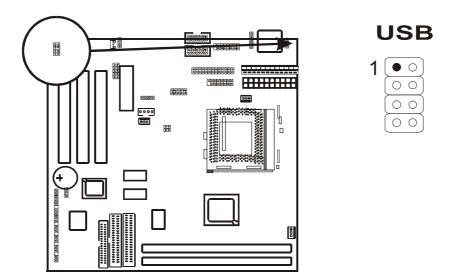

## LPT

*The onboard parallel port* is a 25-pin female connector. It supports standard printer ports, Enhanced Parallel Port (EPP), Extended Capabilities Port (ECP), Standard Parallel Port (SPP).

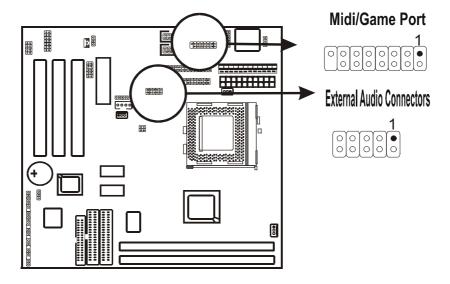

## USB: USB (Universal Serial Bus) Connector

*Universal Serial Bus connector*, marked as "USB," is used to connect USB devices. There are 2 USB connectors on this main board.

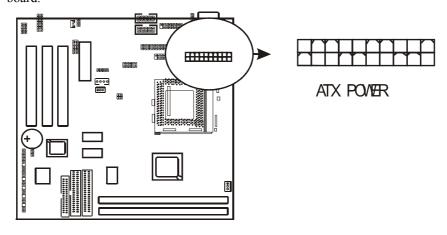

### Midi/Game Port & External Audio Connectors

Midi/Game port has 15 pins connecting to the game joystick. External Audio connectors are "LINE-OUT, LINE-IN, MIC-IN" for audio functions.

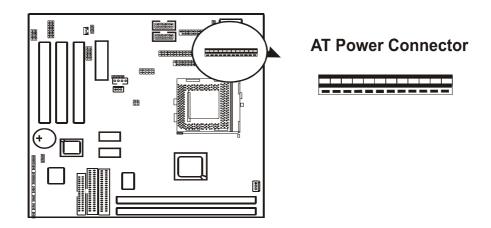

## 2-5-3 ATX Power Supply Connector

The main board supports standard AT and ATX power supply. *ATX power supply connector* has 20 pins, which is especially designed for ATX case. The ATX power supply supports the function of the "Soft Power On Momentary switch" which connects the front panel switch to the 2-pin SOFT-PWR on the system board. While the power switch on the back of ATX power is turned on, the full power will not go into the system board until the front panel switch is momentarily pressed. Push the switch again to turn off the power to the system board.

# 2-5-4 AT Power Supply Connector

The main board supports standard AT and ATX power supply. AT Power supply has 12 pins.

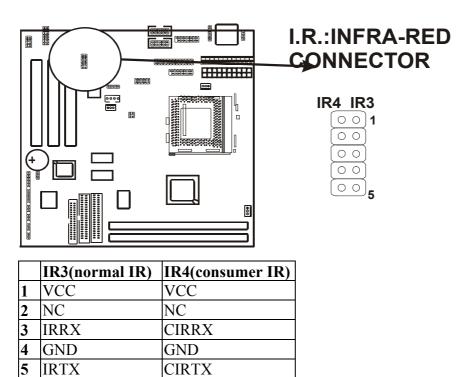

Pin	Signal	Pin	Signal
1	POWER GOOD	7	GROUND
2	+5V DC	8	GROUND
3	+12V DC	9	-5V DC
4	-12V	10	+5V DC
5	GROUND	11	+5V DC
6	GROUND	12	+5V DC

## 2-5-5 I.R.: IrDA Connector

*IR connector* supports wireless infrared module. With this module and application software like Laplink, or Win95 Direct Cable Connection, user can transfer data to or from laptops, notebooks, PDA and printers. This connector supports **HPSIR**, **ASKIR**, and **Fast IR**.

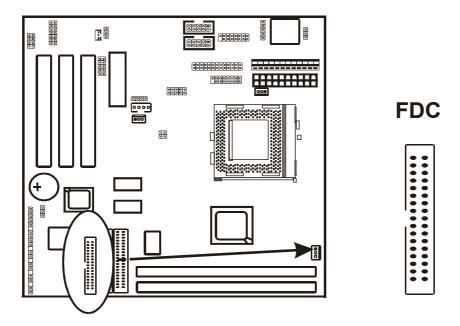

Attach Infrared module to IR connector. Be sure to put in the right direction during installation.

Intel 810 Main Board

## 2-5-6 Floppy Disk Connector

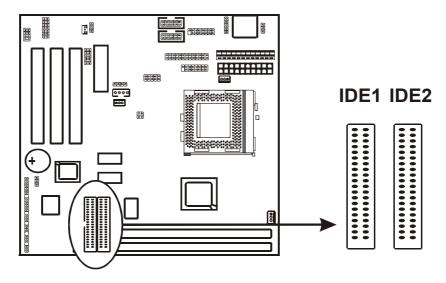

*Floppy Disk Connector* has 34 pins and allows connection of a floppy drive. In all two floppy drives can be connected to the mother board , known as floppy A and B. The BIOS allows you to disable the floppy controller if you do not use any floppy driver, that will free an Interrupt. The BIOS also allows swapping of floppy A and B although this will not be useful to most users.

### 2-5-7 IDE1 and IDE2

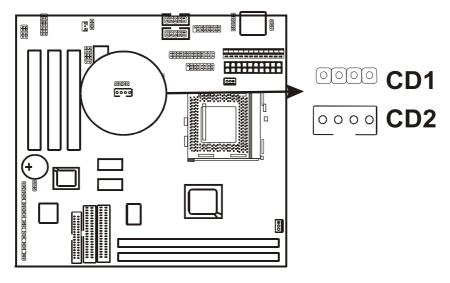

The IDE connectors are used to connect IDE devices such as Harddisks and CD-ROM drives to the motherboard. Each connector constitutes an IDE channel, each channel accepts 2 IDE devices, one Master and one Slave. The IDE 1 connector is also known as the primary channel, IDE 2 is the secondary channel. Therefore the primary Master is the IDE device connected to IDE1 as Master, the primary Slave is the IDE device connected to IDE 1 as Slave. Jumpers on the IDE device determine Master and Slave settings. Your harddisk or CD-ROM should have a sticker with jumper settings. Make sure that you set these jumpers correct. Please use the following advice as reference:

- If you have only device connected to an IDE connector, always set it as Master.
- If you have one HDD and CD-ROM in your system, then connect the HDD to IDE1 as Master, and the CD-ROM to IDE2 as Master
- If you have one Harddisk and one CD-ROM connected to the same IDE connector, set the HDD to Master and the CD-RAM to Slave.

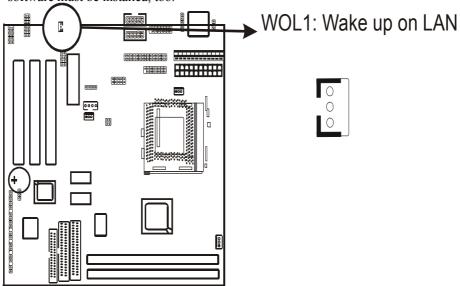

## 2-5-8 Internal Audio Connectors

Internal Audio Connectors are "CD\_IN." It is a CD ROM external audio input signal to line-out (speaker) of the main board.

## 2-5-9 WOL1: Wake up on LAN (Optional)

**Wake up on LAN** marked as "WOL1," is a 3-pin connector. To support this feature, a network card is required for the system and network management software <u>must</u> be installed, too.

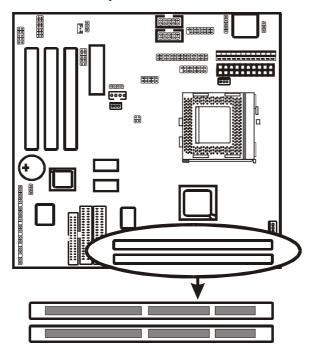

## WOL1 (Wake up on LAN) function requirement:

Power supply should be able to offer at least 1A driving ability to the signal "5V trickle voltage."

# 2-6 Memory

The 6B810/810CD/810E supports only Dual Inline Memory Modules (DIMMs). Two sockets are available for 3.3 Volt unbuttered SDRAM (Synchronous Dynamic Random Access Memory). The sizes that are supported are:8, 16, 32, 64, 128, or 256, memory sizes between 8MB to 256MB can be formed this way. Refer to the picture below for the position of the DIMM slots:

Memory speed is controlled through the BIOS, on the Advanced Chipset Features Setup page you will find several items related to SDRAM speed. Refer to the BIOS section for more details.

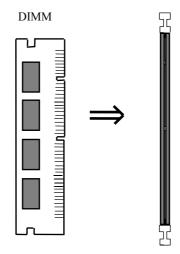

### **WARNING:**

- DIMM modules that have more than 18 chips are not supported on this motherboard. (Due to signal integrity)
- If the system CPU bus operates at 100MHz/133MHz, use only PC100-/PC133-compliant DIMMs. (System won't boot otherwise)

## 2-6-1 Memory Installation

The DIMM modules can be inserted in DIMM slots 1 to 2. Because of the two notches in the DIMM module it can be inserted in only one way. Please refer to the picture below for information on how to insert the DIMM modules.

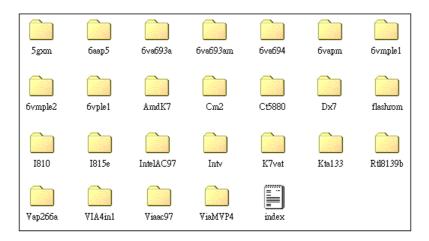

### **WARNING:**

Make sure that you unplug your power supply when adding or removing memory modules or other system components. Failure to do so may cause severe damage to both your motherboard and expansion cards

# **Chapter3** Software Install

# 3-1 Notice of CD Driver Installation

This CD contains below drivers. The user must read "Index" before installing required drivers. Index offers all the information on all the drivers.

CD driver is always updated with the latest version, so the actual CD content may be somewhat different from the above picture.

- 1. **Main boards:** 5gxm, 6aap5, 6va693a, 6va693am, 6va694, 6vapm, 6vmpl, 6vmple1, 6vmple2, 6vple1, Amdk7, I810, I815e, Intv, K7vat, Kta133, Vap266a (please select I810 directory for this main board)
- 2. **DX7:** Windows DirectX7 driver.
- 3. Flashrom: BIOS flash upgrade utility.

# 3-2 How to Install Software Driver

### **Installation Procedure:**

1. Setup 1: Install 810 INF (Path: root: \ I810\ INF\ Setup.exe)

### 2. Setup 2: Install VGA Driver

- For Windows 98/ ME: (Path: root: \ I810\ Vga\ Win9X\ Setup.exe )
- For Windows NT4.0: (Path: root: \ I810\ Vga\ Winnt4\ Setup.exe)
- For Windows 2000: (Path: root: \ I810\ Vga\ Win2000\ Setup.exe)

### 3. Setup3: Install Sound Driver

a. If sound codec chip is ALC100/ ALC200

- For Windows 2000: (Path: root: \ IntelAC97\ Alc200\ Win2000\ Setup.exe)
- For Windows 95: (Path: root: \ IntelAC97\ Alc200\ Win95\ Setup.exe)
- For Windows 98: (Path: root: \ IntelAC97\ Alc200\ Win98\ Setup.exe)
- For Windows NT4.0: (Path: root: \ IntelAC97\ Alc200\ Winnt\ Setup.exe)

## b. If sound codec chip is AD1881

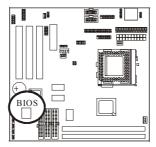

- For Windows 98: (Path root: \ IntelAC97\ Ad1881\ Win98\ Setup.exe)
- For Windows NT: (Path root: \ IntelAC97\ Ad1881\ Nt4\ Setup.exe )

- c. If sound codec chip is YAMAHA 752
- For Windows NT: (Path root: \ IntelAC97\ Ymf752\ Winnt40\ Setup.exe)

# **Chapter4** The BIOS

The BIOS is a piece of software (Basic Input Output System) that performs most low level tasks. When you start up your system, the BIOS is the first code that gets to run. The BIOS resides in a FLASH ROM, and the code in the FLASH ROM can be updated through a special utility called AWDFLASH. (Award Flash). This is generally not necessary, but in some cases updating the BIOS is necessary to support new devices that were not on the market at the time the motherboard was released. For the physical location of the BIOS FLASH ROM IC on your 6B810/810CD/810E motherboard, refer to the picture below:

The BIOS IC is inserted in an IC socket, which means that it can be removed and exchanged for another IC if necessary.

#### Is updating my BIOS necessary?

As a general rule if your system is functioning properly and you are not an experienced user, do not try to update the BIOS. Only if you have specific problems that a BIOS update may solve may it be advisable to update the BIOS.

The update process is pretty complex, and you should bear in mind that if updating the BIOS goes wrong you may render your system unbootable. Therefore, do not update unless you know what you are doing.

#### Finding the latest official BIOS revision

For the latest official BIOS revision, please go to our website at <a href="www.lucky-star.com.tw">www.lucky-star.com.tw</a>. On the support page you can find the latest BIOS files for our motherboards.

### 4-1 Updating the BIOS

As said, this procedure is complicated, only update your BIOS when you experience

problems with your system. Because each BIOS release completely overwrites the previous version and there is no need to update to intermediate BIOS releases when updating the BIOS. Therefore always use the latest BIOS revision when doing a BIOS update. The BIOS update procedure is as follows:

- In order to flash update the BIOS, you will need 2 files:
  The BIOS binary file (.bin file from the website)
  AWDFLASH.EXE utility file. (This utility can be downloaded from our website)
- Create a directory on your C harddisk drive: and name it FLASH
- Put the BIOS .bin file and the AWDFLASH utility in the FLASH directory.

### You may want to jot the BIOS .bin file name down on a piece of paper.

- Restart the computer, press DEL to go into the BIOS, then please disable the following:
  - System BIOS Cacheable (in Advanced Chipset Features)
  - Video BIOS Shadow (in Advanced BIOS Features)
  - Save the changes by selecting 'save and exit', and restart the computer.
- Press Ctrl + F5 just before Windows is starting up (right after the second BIOS screen) for a DOS boot, you will see the message "Windows is bypassing all your startup files". You end up at a DOS prompt.
- Now type *cd FLASH* to change to the newly created directory.
- Here type AWDFLASH mybios.bin /py /cc /sn /cd, where mybios.bin is the file name for the BIOS binary file you want your BIOS to upgrade to. Now the upgrading will begin.

#### WARNING

Do NOT in any way disturb the system during upgrading. If for any reason the system is stalled your system may not be able to boot again.

■ After the upgrading has ended press F1 to reset, press DEL to go into BIOS and make the following changes:

Load Setup Defaults.

Go into the Frequency/Voltage Control page to adjust your CPU speed and voltage (please make sure the CPU voltage matches your CPU spees, in case of doubts leave it to 'default').

Save your settings and you are done.

# 4-2 The CMOS memory

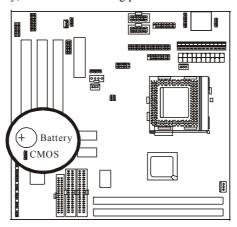

The BIOS uses the CMOS memory to store all the settings that have been made through the BIOS Setup pages.

#### **Battery**

The CMOS memory remembers all settings, even when the system is switched off, by use of a 3V Lithium battery. If this battery runs low CMOS is unable to keep its settings and you will need to replace the battery. The BIOS will give you an error message wgen it detects a low battery voltage. The error message 'CMOS checksum error' may also point to a low battery problem.

### Restoring default settings

You can load default values into the CMOS memory by selecting 'Load Optimized Defaults' in the BIOS Setup. If you need to force the CMOS settings to default without entering the BIOS Setup page you can use the CMOS jumper. For the location of the jumper and the battery, refer to the following picture:

Normally CMOS will be in the 1-2 position, this will connect the battery to the southbridge of the chipset which contains the CMOS memory. If CMOS is temporarily set to 2-3 this will interrupt the battery electricity flow, and the CMOS memory will be erased, this will

however only work if the power supply is not switched on. Now at the next reboot the BIOS will automatically load the CMOS default values. Take the following steps to clear CMOS memory:

- Take the power cord from the power supply.
- Temporarily set CMOS to 2-3, and set it back to 1-2.
- Put the power cord back and restart the system, the default values will be loaded.

### **CMOS Status**

	Retain CMOS settings	Clear CMOS Settings
CMOS	1 2 3	123

The following part of this chapter will describe the individual BIOS Setup pages and all the items that can be adjusted to fine tune your system.

# 4-3 The BIOS Setup Pages

To enter the BIOS Setup pages, thke the following steps:

- Start up the system.
- After memory counting has finished, press [DEL] to enter the BIOS Setup pages.

Now the following menu will appear:

CMOS SETUP UTILITY Copyright © 1984 – 2001 Award Software		
> Standard CMOS Feat tres	➤ Frequency/Voltage Control	
➤ Advanced BIOS Features	Load Optimized Defaults	
➤ Advanced Chipset Features	Set Supervisor Password	
➤ Integrated Peripheral:	Set User Password	
➤ Power Management Setup	Save & Exit Setup	
➤ PnP/PCI Configurations	Exit Without Saving	
Esc: Quit F9: Meru in BIOS $\uparrow \downarrow \rightarrow \leftarrow$ : Select Item		
F10 : Save & Exit Setup		
Time, Date, Hard Disk Type		

## **Selecting items**

To Select items, use the following method:

- Use the arrow keys to move between items and select fields.
- Press [enter] to enter the selected submenu.

### **Submenus**

All items that start with a  $\triangleright$  are submenus. Pressing [enter] when a submenu is selected will enter that submenu.

# **Modifying selected items**

The [Up]/[Down] keys can be used to modify values within the selected fields. Note that some fields also let you enter values directly.

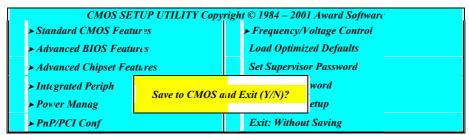

### **Hot Keys**

Throughout the BIOS Setup Pages the hot keys will give you access to a group of commands. Refer to the following table for the hot keys and their function:

Key	ey Command Description		
F10	Save & Exit Setup	Saves the changes made and reboots the system.	
[Esc]	Quit	Returns to the previous menu	
F1	Help	General Help	
F2	Help	Help for specific item	
F5	Previous values	Restores the previous values. These are the values that the user started the current session with.	
F7	Optimized Defaults	Loads all options with the Optimized Default values.	

## Save & Exit Setup

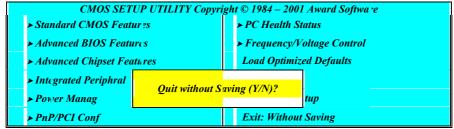

When you select the [SAVE & EXIT SETUP] option from the Main Menu, all changes that you made will be saved to the CMOS memory and the setup utility will exit, rebooting your system.

Pressing [Y] and [enter] will save the changes, pressing [N] and [enter] will keep the old settings.

## **Exit Without Saving**

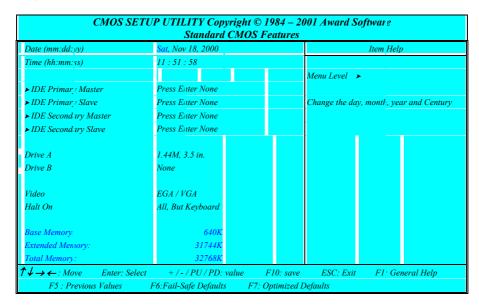

Selecting 'Exit Without Saving' will exit Setup without saving changes to CMOS.

Pressing [Y] and [enter] will Exit without saving, pressing [N] and [enter] will not Exit.

# 4-3-1 Standard CMOS Setup

Select the [STANDARD CMOS SETUP] option from the Main Menu and press [Enter] key.

This screen allows you to change the basic CMOS Settings such as date and time, harddisk type etc. After you have made the changes you need to make press [ESC] to return to the main menu.

#### **Date and Time**

	Default	Possible Settings	Notes
Date	Weekday, month,	Type the current date.	Using the P-Up / P-Dn keys to
	day ,year	(weekday auto changes)	toggle is possible
Time	hlı:mm:ss	Type the current time	24-hour clock format. (15:15:00

	= 3:15:00)

### **IDE Devices**

When you select one of the IDE devices, a submenu will pop up. Refer to the picture below.

CMOS SETUP UTILITY Copyright © 1984 – 2001 Award Software IDE xxxx		
IDE HDD Auto Detection	Press Enter	Item Help
IDE Primary Master	Auto	Menu Level ►►
Access Mode	Auto	
Capacity	0 MB	To auto-detect the HDD's size, head on this channel
Cylinder	0	
Head	0	
Precomp	0	
Landing Zon?	0	
Sector	0	

This Menu is the same for all 4 IDE devices:

- Primary Master IDE 1 first device
- Primary Slave IDE 1 second device
- Secondary Master IDE 2 first device Secondary Slave IDE 2 second device

	Values	Meaning
IDE HDD		Pressing Enter will make the BIOS auto detect the IDE device
Auto	Press Enter	on this channel. The result will be displayed below, starting
Detection		with the 'capacity' item. (These items are read only)
	Auto	This will auto detect the device at each boot up.
	Manual	This will use the setting set by the user. No auto detection at
IDE xxx		start up will take place.
		This setting means no device is present. This will prevent the
		BIOS from looking for a device and speed up booting.
Access	CHS	Selects the CHS access mode.
Mode	LBA	Logical Block Addressing, for HDD drives larger than 504MB
	LDA	(All modern HDDs)

Large	For very large HDDs.
Auto	The BIOS will automatically detect the best access mode.

#### **Drive A and Drive B**

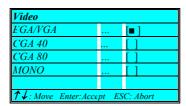

The Drive A / B items allow you select the type of device that you have attached to the Floppy (FDD1) connector on the motherboard. You can select between different floppy disk drive types by using the Page-Up and Page-Down keys. If you press [enter] while Drive A or B is selected the following menu will pop up that will allow to choose a device as well:

Drive X		
None		[ ]
360K, 5.25 in.		[ ]
1.2M, 5.25 in.		[]
720K, 3.5 in.		[]
1.44M, 3.5 in.		[  ]
2.88M, 3.5 in.		
↑↓: Move Enter: Accept	ESC: A	bort

### Video

The Video item allows you to select a video mode. Since most modes are outdated we advise you to always select EGA/VGA. You can select between different video modes by using the Page-Up and Page-Down keys. If you press [enter] a menu pops up.

(Mono is for a monochrome screen that can only display one color)

### Halt On

The BIOS will stop booting when an error is detected. You can set through this item what errors will stop the system booting. You can select between different error modes by using the Page-Up and Page-Down keys.

	Values	Meaning
	All Errors	Stop booting on all errors.
	No Errors	Always Boot, no matter what error is detected.
	ALL, BUT	Stop booting on all errors, but not on a keyboard error.
Halt On KEYBOARD		
Han On	All, but	Stop booting on all errors, but a diskette error.
	diskette	
	All, but	Stop booting on all errors, but keyboard and diskette errors.
	disk/key	

# 4-3-2 BIOS Features Setup

Select the [Advanced BIOS Features] option from the Main Menu and press [Enter] key.

Virus Warnii g	Disabled	Item Help
CPU Interna! Cache	Enabled	
External Cache	Enabled	Menu Level ▶
Processor Number Feature	Enabled	Allows you to choose the VIRUS warning
Quick Power On Self Test	Enabled	feature for IDE Hard Disk boot sector
First Boot Device	Floppy	protection. If this function is enabled and
Second Boot Device	HDD   0	someone attempt to write data into this ar
Third Boot L'evice	LS 120	BIOS will show a warring message on
Boot Other L'evice	Enabled	screen and clarm beep
Swap Floppy Drive	Disabled	
Boot Up Floppy Seek	Disabled	
Boot Up NumLock Status	On	
Gate A20 Option	Fast	
Typematic Rate Setting	Disabled	
Typematic Rate (Chars/Sec)	6	
Typematic D?lay (Msec)	250	
Security Option	Setup	
OS Select For DRAM > 64 MB	Non-OS2	
HDD S.M.A.R.T. Capability	Disabled	
Report No FDD For WIN 95	Yes	

The screen is not as long on your monitor. You can use the arrow keys to scroll down and up the page. The following explains all individual items and their meaning.

Virus protection

· == == F= ============================		
	Values	Meaning
Virus Warning	IEnabled	The BIOS will give a beep and a warning whenever an attempt is made to write to the boot sector of the HDD.
,, an ining	Disabled	The BIOS will allow write attempts to the boot sector

**CPU Cache settings** 

CI & Cache settings			
	Values	Meaning	
CPU	Enabled	This will enable the Internal L1 cache of your CPU.	
Internal Cache	Disabled	(Not recommended)	
External	Enabled	This will enable the Internal L2 cache of your CPU.	
Cache	Disabled	(Not recommended)	
CPU L2 Cache ECC	Enabled	This will enable CPU Internal L2 cache ECC (Error Checking)	
checking	Disabled	(Not recommended)	

## **Processor Number Feature**

	Values	Meaning
Processor	Enabled	(Not recommended)
Number Feature	Disabled	(Not recommended)

**Quick Power On Self Test** 

	Values	Meaning
Quick Power On	IEnanied	The BIOS will execute test routines that test most parts of the motherboard during boot up.
		The BIOS will skip the tests, speeding up the boot process. Errors will on the other hand not be detected.

### **Boot Devices**

The first to third boot device items allow you to select what device the system should boot from. If the BIOS fails to boot from the first boot device, it will attempt to boot from the

second boot device, if that fails too, the third boot device is tried. If you set the *boot other device* item to enabled, the BIOS will try to boot from other devices if the first to third choices all fail. If you set this item to disabled, the BIOS will not boot if the first to third devices all fail to boot.

	Values	Meaning
	Floppy	The system attempt to boot from diskette. (first boot device default)
	LS 120	The system will attempt to boot from an attached LS 120 drive. (Third boot device default)
	HDD 0	The system will attempt to boot from the first HDD. (Second boot device default)
First ~ Third	SCSI	The system will attempt to boot from the first device attached to the first SCSI interface.
boot device	CD-ROM	The system will attempt to boot from the first CD-ROM found.
	HDD1	The system will attempt to boot from the second HDD.
	HDD2	The system will attempt to boot from the third HDD.
	HDD3	The system will attempt to boot from the fourth HDD.
	ZIP100	The system will attempt to boot from an attached ZIP 100 drive
	LAN	The system will attempt to boot over the network. You will
	LAIN	require a LAN card with boot BIOS for this option to function.
	Disabled	This disables booting from this device.

### **Floppy Drive Settings**

	Values	Meaning
Swap Floppy Drive	Enabled	This will swap floppy A and B. Most systems not even have 2 floppy drives, so this item is irrelevant.
Dive	Disabled	Floppy A and B are not swapped
Boot-up Floppy Seek		The BIOS will test whether the floppy has 40 or 80 tracks during boot up. All new floppy drives are 80 tracks.
Disabled		The BIOS will not test the amount of tracks.

## **Keyboard Typematic Rate and Delay Settings**

If you set the *typematic rate setting* item to disabled, the system will use the defaults of 6 and 250 for the rate and delay items. If you set it to enabled you can select the values yourself. Refer to the table below:

Values Mean	ing
-------------	-----

Typematic Rate	6 ~ 30	This value sets the amount of time a character is repeated per second if it is kept down on the keyboard. Choose from the following values: 6, 8, 10, 12, 15, 20, 24, 30.
Typematic Delay	$250 \sim 1000$	This value sets the amount of time in ms before a character starts repeating after it was pressed on the keyboard. Choose from 250, 500, 750 and 1000 ms.

**Security Option**The security option item allows you to select when the password needs to be entered. Refer to the table below:

	Values	Meaning
Security Option	Setun	Password must be entered only when the user wants to enter the BIOS setup.
Option	System	The password must always be entered at boot.

## OS Select for DRAM > 64MB

	Values	Meaning
OS select for	Non-OS2	If your OS is not OS2, always select this setting.
DRAM > 64MB	OS2	Select this setting only if your OS is OS2

HDD S.M.A.R.T. Capability

	Values	Meaning
HDD S.M.A.R.T. Capability		Some Harddisks support SMART, a diagnostic standard that allows the HDD to tell the system about problems. Enable this item only if your HDD supports SMART.
Cupuotitiy	Disabled	Default setting.

**Report No FDD For WIN 95** 

reportin	JIDD I OI	VELVE
	Values	Meaning
Report No	Yes	
FDD For WIN 95	No	

# 4-3-3 Chipset Features Setup

Select the [Advanced BIOS Features] option from the Main Menu and press [Enter] key.

DRAM CAS Latency Time	3	Item Help
SDRAM Cycle Time Tras/Trc	6/8	
DRAM RAS-to-CAS Delay	3	Menu Level ▶
DRAM RAS Precharge Time	3	
ystem BIOS Cacheable	Enabled	
ideo BIOS Cacheable	Enabled	
Memory Hole At 15M-16M	Disabled	
CPU Latency <sup>,</sup> Timer	Disabled	
Delayed Transaction	Enabled	
On-Chip Vid?o Window Size	64MB	
ocal Memory Frequency	100 Mhz	
* Onboard Lisplay Cache Settin	g *	
CAS# Latency	3	
Paging Mode Control	Open	
RAS-to-CAS Override	by CAS# LT	
RAS# Tining	Fast	
RAS# Precharge Timing	Fast	

The screen is not as long on your monitor. You can use the arrow keys to scroll down and up the page. The following explains all individual items and their meaning.

### **SDRAM Timing**

If the SDRAM Timing by SPD item is set to Enabled, the three items below will automatically be set be the BIOS. To do this the BIOS will read information out of the SPD EPROM that is located on the DIMM module, this information will tell the BIOS how to best accesses the memory. If you set this item to disabled, you can set the memory access items yourself. A word of warning though, if you are not familiar with DRAM settings does NOT make any changes (for the sake of system stability). Refer to the table below for the meaning of the individual DRAM items:

	Values	Meaning		
SDRAM CAS	2	2 is the fastest setting, use this setting only if your DIMM modules support CAS 2.		
Latency Time	3	This is the default setting, always use this setting when the system is unstable.		
SDRAM	5/7			
Cycle Time Tras/ Trc	6/8			
SDRAM	2	These controls the DRAM page miss and row miss lead off		
RAS-to-CAS Delay	3	timing.		
SDRAM RAS	2	SDRAM propheres time by RAC		
Precharge Time	3	SDRAM precharge time by RAS.		

### **BIOS** Cacheable

	Values	Meaning
System BIOS	Enabled	Define whether system BIOS area cacheable or not.
Cacheable	Disabled	Define whether system BIOS area cacheable of not.
Video BIOS Enabled		To define whether video BIOS area cacheable or not.
Cacheable	Disabled	To define whether video BIOS area cacheaoic of not.

### **Memory Hole**

Some old devices need a memory hole to be present between 15M and 16M. CPU Cycles matching the hole will be passed on to the PCI bus instead of accessing the memory. Normally you can disable this setting, but if one of your devices needs it set it to enabled.

	Values	Meaning
Memory Hole	Disabled	There is no memory hole.
at 15M-16M	Enabled	A memory hole exists between 15 and 16MB.

### **CPU** Latency timer

	Values	Meaning
CPU Latency	Enabled	
Timer	Disabled	

### **Delay Transaction**

	Values	Meaning
Delay	Enabled	
Transaction	Disabled	

## **On-Chip Video Window Size**

	Values	Meaning
On-Chip	64M	
Video	32M	
Window Siz	e Disabled	

# **Local Memory Frequency**

Docur men	Bocai Wemoi y 1 rectaency		
	Values	Meaning	
Local	100MHz		
Memory Frequency	133MHz		

### **Onboard Display Cache Setting CAS# Latency**

	Values	Meaning
Onboard Display Cache	2	
Setting CAS# Latency		

**Paging Mode Control** 

	Values	Meaning
Paging Mode	Close	
Control	Open	

**RAS Setting** 

	Values	Meaning
RAS-to -CAS Override	by CAS # LT	
Override	Override(2)	
RAS# Timing	Slow	
KAS# 11ming	Fast	
RAS#	Slow	
Precharge	Fast	

# 4-3-4 Integrated Peripherals

Select the [Integrated Peripherals] option from the Main Menu and press [Enter] key.

The screen is not as long on your monitor. You can use the arrow keys to scroll up and down the page.

**IDE Channel Settings**The following table explains IDE channel settings and what they mean:

	Values	Meaning
Onchip	Enabled	Enables the use of the first (primary) IDE channel.
Primary PCI IDE	Disabled	This will disable the use of the first (primary) IDE channel.
Onchip	Enabled	Enables the use of the secondary IDE channel.
Secondary PCI IDE	Disabled	This will disable the use of the secondary IDE channel.
	Auto	The BIOS will assign a PIO mode to this device automatically when appropriate
	Mode 0	Select a PIO Mode here. PIO mode 0 is slowest, PIO mode 4 is
xxx PIO	Mode 1	fastest, check your HDD to see what PIO mode it supports.If
	Mode 2	your IDE device supports UDMA mode, then it best to enable
	Mode 3	that mode since it is considerably faster than PIO mode. (Set to
	Mode 4	auto for auto-detection)
xxx - UDMA	Auto	The BIOS will automatically use Ultra DMA Mode if the IDE device supports it.
	Disabled	This will disable the use of Ultra DMA for this device.
IDE HDD Block Mode	Enabled	Block mode allows faster transfer of data between the system and the HDD. Most modern HDDs support it.
	Disabled	Block Mode is not used.

## **USB Setting**

Values Meaning		Values	Meaning
----------------	--	--------	---------

	Enabled	This will allow use of a USB drive.
Controller	Disabled	If you do not need a USB drive, set this item to disabled.
	Enabled	This will allow use of a USB keybaord.
Keyboard Support	Disabled	If you do not need a USB keyboard, set this item to disabled.

**Display Initialization** 

	Values	Meaning
First	IPCT SIAt	The BIOS will first search for a VGA adapter on the PCI bus, if one is found it will be used as primary display.
	Onboard	The onboard AGP is first scanned.

**Floppy Drive** 

	Values	Meaning
FDD	Enabled	This will allow use of a floppy drive.
	Disabled	If you do not need a floppy drive, set this item to disabled.

**AC97 Setting** 

110) / Stelling		
	Values	Meaning
AC97 Audio	Enabled	This will allow use of a onboard AC97 sound codec.
	II Jisahled	If you do not need a onboard AC97 sound codec, set this item to disabled.
AC97 Modem	Enabled	
	Disabled	

### **Power On Function**

TOWER OR	unction	
	Values	Meaning
	Any Key	
	Button Only	
Power On	Keyboard 98	
Function	Password	
	Hot Key	
	Mouse Move	
	Mouse Click	
KB Power On Password	Enter	
Hot Key	Ctrl-F1~	

Power On
----------

**COM ports (Serial Ports)** 

	Values	Meaning
	Auto	The bios will automatically use serial ports.
	Disabled	If you do not need the serial port in question, set this item to
•		disabled.
	3F8/IRQ4	
	2F8/IRQ3	Set on IO address and an IDO to be used by social nexts
	3E8/IRQ4	Set an IO address and an IRQ to be used by serial ports.
	2E8/IRQ3	

## **IR Control**

	Values	Meaning
UART Mode Select	Normal	
	IrDA	Allows use of the IR port in IrDA mode.
	ASKIR	Allows use of the IR port in ASKIR mode.
	SCR	Allows use of the IR port in SCR mode.
UR2 Duplex	Half	Select if your IR device supports Half duplex only.
Mode	Full	For IR devices that support full duplex.

Parallel Port (Printer Port)

	Values	Meaning
	Disable	Disables use of the parallel port.
On board	3BC / IRQ7	Select an IO Address and an IRO to be used by the parallel
Parallel Port	378 / IRQ7	port.
	278 / IRQ5	port.
	SPP	Enables use of SPP devices.
Parallel Port	EPP	Enables use of EPP devices.
Mode	ECP	Enables use of EPP devices.
	ECP + EPP	Enables use of ECP + EPP devices.
ECP mode	1 or 3	Select either DMA channel 1 or 3 (This is only relevant if ECP
use DMA	1 01 3	was selected above). Default is channel 3.

# **PWRON After PWR-Fail**

	Values	Meaning
PWRON After	Off	

PWR-Fail	On	
	Former-Sts	

# MIDI

	Values	Meaning
	300	
Midi Port Address	330	
Auuress	Disabled	
Midi Port IRQ	5	
wiai Fort IKQ	10	

# **Game Port**

	Values	Meaning
	201	
Game Port	209	
	Disabled	

# 4-3-5 Power Management Setup

Select the [Power Management Setup] option from the Main Menu and press [Enter] key.

# Modem IRQ

	Values	Meaning
Modem Use	NA	This disables the modem IRQ
IRQ	3 - 11	Select an IRQ line that will be assigned to your modem here.
	3 - 11	Choose from: 3 (default), 4, 5, 7, 9, 10, 11.

## **Power Button**

I OWEI Dutt	1 ower Button		
	Values	Meaning	
Soft off by	Instant-off	Switches the system off immediately when pressing the power button.	
nower button	Delay 4 Sec	This requires you to press the power button for at least 4 seconds before the system switches off.	

### Wake Events

	Values	Meaning
Wake-Up By	Enabled	Allow the system to wake up on a PCI card IRQ.
PCI Card	Disabled	Will not allow the system to wake up on a IRQ form a PCI card.

### **Resume By Alarm**

	Values	Meaning
Resume By Alarm	Enabled	You can set the date and time on RTC (real-time clock) alarm awaken a system which has been powered down.
	Disabled	Disabled this function.

**Date Setting** 

Values	Meaning

Date (of Month) Alarm/ Time (HH:MM:SS)	You can set the date (of month) and timer (hh:m:m:ss), any event occurring will awaken a system which has been powered down.
---	--

### IDE

	Values	Meaning
Primary	Enabled	Enabled monitor Primary (Secondary) IDE 0/1 for Green event/
(Secondary ) IDE 0/1	Disablec	Disabled this function.

### FDD, COM, LPT Port

	Values	Meaning
FDD, COM,	Enabled	
LPT Port	Disabled	

#### **Wake Events**

	Values	Meaning
PCI PIRQ	Enabled	
{A-D}#	Disabled	

# 4-3-6 PnP/PCI Configurations

Select the [PnP / PCI Configurations] option from the Main Menu and press [Enter] key.

**Reset Configuration Data** 

	Values	Meaning
Reset	ii jisanied	This will not reset the system configuration data (IRQs, DMAs) on reboot.
Configuration Data	Enabled	This will reset the configuration data. Remember to enable this item every time you make a change to your system (such as switching PCI cards etc).

### **Resources Controlled by**

	Values	Meaning
		The table will show the below items: "Reset Configuration
Resources		Data, IRQ-3 assigned to, DMA-0 assigned to." The user can
Controlled		adjust the shown items as required.
By	A 4	The table will not show the above items, and the system will
	Auto	automatically assign the above setup.

### Resources

If you set the Resources Controlled by item to Auto (ESCD), the BIOS will manage all resources for you. If you set it to manual to two items below will allow you to assign the resources manually.

	Values	Meaning
IDO w	PCI/ISA	This setting means the BIOS will assign the interrupt as needed.
IRQ-x assigned to	PnP	This means that it is not fixed to a device
		If you need to make sure that a certain interrupt is assigned to
(x-3~io~13)		an ISA device, set that interrupt to legacy ISA.
DMA-x	PCI/ISA	This setting means the BIOS will assign the DMA Channel as
assigned to	PnP	needed, it is not fixed to a device
(x = 0, 1, 3,	I access ICA	If you need to make sure that a certain DMA channel is
5, 6, 7)	Legacy ISA	assigned to an ISA device, set that channel to legacy ISA.

PCI / VGA Palette Snoop

Ì		Values	Meaning
	PCI / VGA	Disabled	Default setting.

Palette Snoop	This will allow the system to look at the palette the VGA uses to display. Some applications speed up with this setting but it is
	mostly obsolete.

# 4-3-7 Frequency/ Voltage Control

Select the [Frequency / Voltage Control] option from the Main Menu and press [Enter]

key.

	CMOS SETUP UTILITY Copyright © 1984 – 2001 Award Softwa'e Frequency / Voltage Control

### **Auto Detect DIMM /PCI Clk**

rate Detect	ruto Detect Divivi71 Ci Cik		
V	alues	Meaning	

Auto Detec DIMM/ PCI	lEnabled	If set to enabled the BIOS will detect the values for the PCI and DIMM clock.
	II )ısahled	If disabled, the BIOS will use the values set on this page and on the Advanced Chipset Features page.

### **Spread Spectrum**

	Values	Meaning
Spread Spectrum	0.25%	
	0.50%	
	Disabled	

### **CPU Host Clock (CPU/PCI)**

	Values	Meaning
IC lock	Default or 66/33 – 150/37MHz	This item allows setting of the CPU and PCI bus frequencies. If set to default, the BIOS will select the values automatically. Otherwise, if you have a 100MHz FSB CPU we recommend you use the 100/33 setting. If you have a 133MHz FSB CPU we recommend you use the 133/33 setting. Any other setting will make the system operate without it specifications and we can not guarantee proper functioning in that case. The other setting are: 66/100/133, 68/102/34, 75/112/37, 100/100/33, 103/103/34, 124/124/41, 133/133/44, 140/140/46, 150/150/50, 133/100/33, 140/105/365, 150/112/3MHz

# 4-3-8 Passwords

The BIOS Setup program allows you to specify passwords in the Main menu. The passwords control access to the BIOS during system startup. The passwords are not case sensitive. In other words, it makes no difference whether you enter a password using upper or lowercase letters. The BIOS Setup program allows you to specify two separate passwords:

- Supervisor password
- User password.

The function of the supervisor password depends on the setting for the Security Option item on the Advanced BIOS Features page. If set to System, the supervisor password must

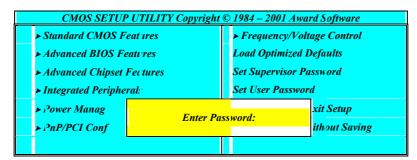

be given every time the system boots, if set to setup, the password must be given only when you want to enter the BIOS Setup.

The user password has the same functionality, with the only difference that anybody logging in with the user password may only change the user password when entering the BIOS Setup page. All other items in the BIOS Setup will be disabled (unchangeable).

When both passwords are disabled, anyone may access all BIOS Setup program functions.

#### Setting the password

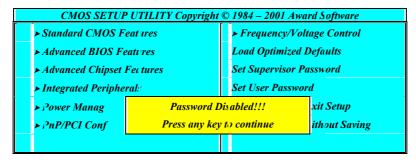

To set the Supervisor password, select the Set Supervisor Password item in the main BIOS Setup Menu. Now a dialog will pop up asking you to enter a password.

Now you can enter your password, after entering the password the menu will pop up again and will ask you to reconfirm the password. After entering and pressing [enter] the password will be stored to CMOS RAM and the password will be enabled.

### Disabling the password

To disable the password, simply press [enter] without entering any other letters or numbers. This will disable the password, the BIOS will tell you by displaying the following dialog:

#### Password Unknown

If you forgot the password, you can clear the password by erasing the CMOS RAM. The RAM data containing the password information is powered by the onboard button cell battery. Please refer to the CMOS RAM section earlier in this chapter. After clearing the CMOS memory, hold down <Delete> during bootup and enter BIOS setup to re-enter user preferences.

# Chapter 5 Appendix

# 5-1 Memory Map

Address range	Size	Description
00000-7FFFF	512K	Conventional memory
80000-9FBFF	127K	Extended conventional memory
9FC00-9FFFF	1K	Extended BIOS data area if PS/2 mouse is
		installed

Intel 810 Main Board

A0000-C7FFF	160K	Available for hi DOS memory
C8000-DFFFF	96K	Available for hi DOS memory and adapter
		ROMs
E0000-EEFFF	60K	Available for UMB
EF000-EFFFF	4K	Video service routine for monochrome &
		CGA adapter
F0000-F7FFF	32K	BIOS CMOS setup utility
F8000-FCFFF	20K	BIOS runtime service routine (2)
FD000-FDFFF	4K	Plug and play ESCD data area
FE000-FFFFF	8K	BIOS runtime service routine (1)

# 5-2 I/O Map

000-01F	DMA controller (master)
020-021	Interrupt controller (master)
022-023	Chipset control registers. I/O ports
040-05F	Timer control registers
060-06F	Keyboard interface controller (8042)
070-07F	RTC ports & CMOS I/O ports
080-09F	DMA register
0A0-0BF	Interrupt controller (slave)
0C0-0DF	DMA controller (slave)

Intel 810 Main Board

0F0-0FF	Math coprocessor
1F0-1FB	Hard disk controller
278-27F	Parallel port 2
2B0-2DF	Graphics adapter controller
2F8-2FF	Serial port 2
360-36F	Network ports
378-37F	Parallel port 1
3B0-3BF	Monochrome & parallel port adapter
3C0-3CF	EGA adapter
3D0-CDF	CGA adapter
3F0-3F7	Floppy disk controller
3F8-3FF	Serial port-1

# 5-3 Time & DMA Channels Map

# Time map:

Timer channel 0 system timer interrupt Timer channel 1 DRAM refresh request Timer channel 2 speaker tone generator

## **DMA** channels:

DMA channel 0 available

DMA channel 1 onboard ECP (option)

DMA channel 2 floppy disk (SMC chip)

DMA channel 3 onboard ECP (default)

DMA channel 4 cascade for DMA controller 1

DMA channel 5 available

DMA channel 6 available

DMA channel 7 available

# 5-4 Interrupt Map

**NMI:** non-maskable interrupt

# IRQ(H/W):

0 system timer interrupt from timer 0

- 1 keyboard output buffer full
- 2 cascade for IRQ 8-15
- 3 serial port2
- 4 serial port1
- 5 parallel port 2

- 6 floppy disk (SMC chip)
- 7 parallel port 1
- 8 RTC clock
- 9 available
- 10 available
- 11 available
- 12 PS/2 mouse
- 13 math coprocessor
- 14 onboard hard disk (IDE1) channel
- 15 onboard hard disk (IDE2) channel

# 5-5 RTC & CMOS RAM Map

### RTC & CMOS:

- 00 seconds
- 01 seconds alarm
- 02 minutes
- 03 minutes alarm
- 04 hours
- 05 hours alarm
- 06 day of week
- 07 day of month
- 08 month

- 09 year
- 0a status register a
- 0b status register b
- 0c status register c
- 0d status register d
- 0e diagnostic status byte
- 0f shutdown byte
- 10 floppy disk drive type byte
- 12 hard disk type byte
- 13 reserve
- 14 equipment type
- 15 base memory low byte
- 16 base memory high byte
- 17 extension memory low byte
- 18 extension memory high byte
- 19-2d
- 2e-2f
- 30 Reserved for extension memory low byte
- 31 reserved for extension memory high byte
- 32 date century byte
- 33 information flag
- 34-3f reserve
- 40-7f reserved for chipset setting data

# 5-6 ISA I/O Address Map

I/O A dress (HEX)	I/O device
000 - 01F	DMA Controller 1, 8237A-5
020 - 03F	Interrupt Controller 1, 8259A
040 - 05F	System Timer, 8254-2
060 - 06F	8042 Keyboard Controller
070 - 07F	real-time Clock/CMOS and NMI Mask
080 - 09F	DMA Page Register, 74LS612
0A0 - 0BF	Interrupt Controller 2, 8259A

Intel 810 Main Board

0C0 - 0DF	DMA Controller 2, 8237A-5
0F0 - 0FF	i486 Math Coprocessor
1F0 - 1F8	Fixed Disk Drive Adapter
200 - 207	Game I/O
20C - 20D	Reserved
21F	Reserved
278 - 27F	Parallel Printer Port 2
2B0 - 2DF	Alternate Enhanced Graphic Adapter
2E1	GPIB Adapter 0
2E2 - 2E3	Data Acquisition Adapter 0
2F8 - 2FF	Serial Port 2 (RS-232-C)
300 - 31F	Prototype Card
360 - 363	PC Network (Low Address)
364 - 367	Reserved
368 - 36B	PC Network (High Address)
36C - 36F	Reserved
378 - 37F	Parallel Printer Port 1
380 - 38F	SDLC, Bisynchronous 2
3B0 - 3BF	Monochrome Display and Printer Adapter

I/O A dress (HEX)	I/O device
390 - 393	Cluster
3A0 - 3AF	Bisynchronous 1
3C0 - 3CF	Enhanced Graphics Adapter
3D0 - 3DF	Color/Graphics Monitor Adapter
3F0 - 3F7	Diskette Drive Controller
3F8 - 3FF	Serial Port 1 (RS-232-C)
6E2 - 6E3	Data Acquisition Adapter 1
790 - 793	Cluster Adapter 1
AE2 - AE3	Data Acquisition Adapter 2

Intel 810 Main Board

B90 - B93	Cluster Adapter 2
EE2 - EE3	Data Acquisition Adapter 3
1390 - 1393	Cluster Adapter 3
22E1	GPIB Adapter 1
2390 - 2393	Cluster Adapter 4
42E1	GPIB Adapter 2
62E1	GPIB Adapter 3
82E1	GPIB Adapter 4
A2E1	GPIB Adapter 5
C2E1	GPIB Adapter 6
E2E1	GPIB Adapter 7

# Chapter 6 Q & A

# 6-1 Errors Messages During Power On Self Test

During **power on self test (post)**, BIOS will automatically detect the system devices. Below is the question that users most often meet. The user may press **"Esc"** key to skip the full memory test.

### 1. Beep sound

On power on, the system make beep sound to offer different messages. If the system is configured correctly, it prompts a short beep to show device configuration is done correctly. When VGA card and DIMM modules are not plugged well, the system makes longer and constant beep sounds.

### 2. BIOS ROM checksum error

It indicates the checksum of the BIOS code is not right and system will always halt on power on screen. Contact the dealer to exchange a new BIOS.

### 3. CMOS battery fails

It indicates the CMOS battery does not work. Contact the dealer to exchange a new battery.

### 4. CMOS checksum error

It indicates the CMOS checksum is incorrect. Load the default values in BIOS to solve this problem. This error may result from a weak BIOS, so exchange a new BIOS if necessary.

### 5. Hard disk initialize

#### Please wait a moment...

Some hard drives require more time to initialize.

### 6. Hard disk install failure

The system can not find or initialize the hard drive controller or the drive. Check if the controller is set correctly. If no hard disk is installed, "Hard drive selection" must be set to "none."

### 7. Keyboard error or no keyboard present

This means the system can not initialize the keyboard. Check if the keyboard is plugged well and be sure no keys are pressed during power on self test.

### 8. Memory test fails

There will be more information to specify the type and location of the memory error.

### 9. Primary master hard disk fail

The BIOS find an error in the primary master hard disk drive.

### 10. Primary slave hard disk fail

The BIOS finds an error in the primary slave hard disk drive.

### 11. Secondary master hard disk fail

The BIOS finds an error in the secondary slave master hard disk drive.

### 12. Secondary slave hard disk fail

The BIOS finds an error in the secondary slave IDE hard disk drive.
