Chapter 1 Introduction

1-1 Overview

The main board utilized Intel's latest i810 chipset which is integrated with new architects such as integrated graphic, sound, ULTRA DMA-66 (optional), USB & AMR is designed to fit INTEL PPGA type Socket-370 CPUs.

Intel's i810 is a cost-effective but high performance chipset which has integrated graphics controller(i752) with a 24 Bit 230MHz RAMDAC & software MPEG2 DECODE. It supports UMA (unified memory architect) mode up to 64MB with main memory or 4MB 3D texture memory(or called display cache) that can accelerate its 3D graphics performance. The on board AD1881 AC-97 CODEC chip provides perfect 3D sound function.

The main board also implements ITE I/O LPC controller utilizing with fully Plug and Play devices and keyboard password setup. It supports 2.88 MB Floppy, Dual 16550 compatible (with 16 bytes FIFO, up to 460K baud rate) serial Port, ECP (Enhanced Capabilities Port), EPP (Enhanced Parallel Port) parallel port, SPP(Standard Parallel Port), Infrared IrDA (HPSIR), and Amplitude Shift Keyed IR. (ASKIR) port and hardware monitor functions too.

The main board contains 3*PCI for highest performance I/O add-on adapter cards. The system board supports three Bus Mastering Slots for high-performance I/O add-on cards. It supports Matrix Independent PCI routing for optimal multiple PCI adapter operations and is PCI2.2 specification compliant. 133MB/s data transfer rate can be compared to 33MB/s on EISA bus or 8MB/s on ISA bus. It supports back to back sequential CPU to PCI Memory writes to PCI Burst Write for full PCI throughput. The new AMR Slot is designed to fit low cost A(Audio) M(Modem) R(Riser) or MR card.

The main board has 2 dual in-line memory modules (DIMM) which can be installed with PC-100 SDRAM memory. The memory subsystem supports up to 512 MB SDRAM of non-buffered 3.3V using standard 168-pin DIMM sockets.

The main board is strengthened with Power Management Wake up Event such as **“Modem ring on”** which is the new inventions to enable PCs to be turned on over the network or modem. These are also key benefits in PC operation, asset management, new system setup and power conservation.

In addition to the above hardware features, this main board is DIP switch design which allows user to set CPU frequency through BIOS. With this design, the disadvantages of setting hardware CPU jumpers are improved to a better and easier procedure through BIOS.

In conclusion, the system chipset and design make the main board a high performance, cost-effective, and energy efficient main board which meets a variety of price/performance levels. The main board is an ideal platform for the increasing requirements of today’s and future’s desktop applications.

1-2 Specifications

- **Chipset:** There are 4 sets of i810 listed as below:

Type	810-L	810	810-DC100	810-DC-133
North	GMCH0	GMCH0	GMCH	GMCH-E
South	ICH0	ICH	ICH	ICH
FSB	100MHz	100MHz	100MHz	133MHz
Display Cache	NO	NO	Yes, 100MHz	Yes, 100MHz
ATA	ATA33	ATA66	ATA66	ATA66
PCI REQ/GNT	4	6	6	6

- **CPU :** can take current 66MHz FSB Celeron-A CPU or later 100MHz version.
- **Memory :** accepts 2 * DIMM in PC-100 specification memory
- **VGA :** On chip 3D graphics function with shared (i810L & i810) or 4MB (i810DC -100/133) 3D texture memory (or called display cache)
- **Sound :** Provides sound function with AD1881 AC-97 3D sound CODEC.
- **Expansion Slot :** 3x PCI slots, 1 x AMR(used for AMR card or MR card)
- **IDE :** support ULTRA DMA-33(i810L) or 66(i810, i810DC-100/133) mode
- **PCB Board size :** 24.40cm x 22.0cm, Micro ATX form factor
- **Optional Items:**
 - TV-out (Chrontal CH7007 chip is needed)

tion : System needs PC-100 memory & over 1 Ampere current power supply for this main board

- **Other features**

- Modem ring on
- Windows 95/98 power off
- Keyboard wake-up
- Mouse wake-up
- DMI, ACPI supported BIOS

1-3 Limitation

There are some limitations on i810 chipset shown as below:

1. Hardware:

- * Must use PC-100 specification DIMM
- * Must use over 1 Ampere current (I) power supply.
- * PCI3 slot is limited as “Slave” mode only; it can not take “Master“ mode add-on cards like SCSI....
- * Incompatible with all S3 series PCI VGA cards; using on-board VGA function is recommended!

2. Software (Driver or BIOS):

- * Suspend to RAM (STR) function is not ready.
- * Windows 95 & 98 don't provide driver (utilities) for i810 chipset. User needs to install driver carefully before using this board(Refer to 1-6 i810 driver and utility installation)
- * If user needs to run “Final Reality” 3D test program, please copy “MSVCRT.DLL” hidden file from attached CD to one formatted floppy diskette and then copy it to hard disk driver path as C:\windows\system to update “MSVCRT.DLL” file. [CD → Floppy Diskette → HDD]

1-4 Notice of Hardware Installation

Before installing the main board hardware, note the following things.

A. Check the package

If any of the below items is missing or damaged, contact the dealer from whom you purchase. Leave this main board in its original package until you are ready to install it. In the package, there are:

- the main board
- manual
- cables
- driver & utility / CD

B. Make sure power is off.

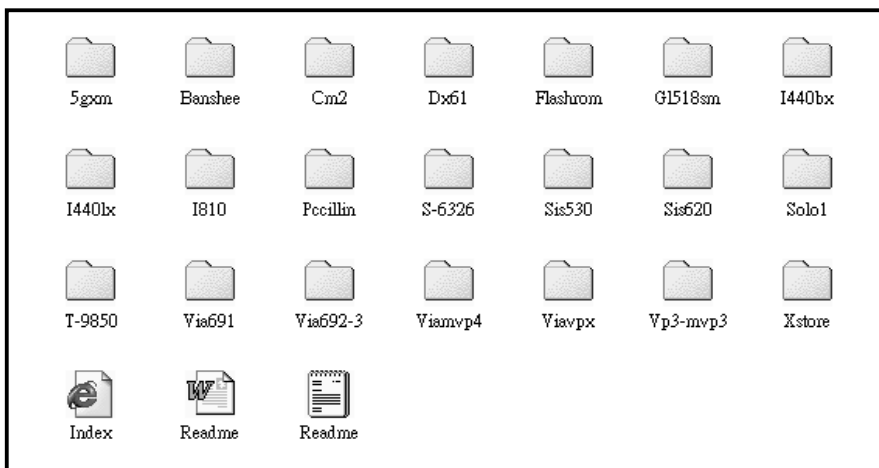

During hardware installation, be sure that there is no power connected at this period.

C. Avoid ESD (Electrical Static Discharge)

While working with this main board, always wear a grounded wristband or ankle strap to avoid ESD (Electrical Static Discharge).

1-5 Notice of CD Driver Installation

This CD contains the following drivers. The user must read “Index” (HTML format) before installing required drivers. Index offers all the information on all the drivers.

CD driver is always updated with the latest version, and the actual CD content may have some differences with the above picture.

1. **Main boards:** i440ZX, i440BX, i440EX, i440LX, i430TX, VIA® VPX, i810 VP3, SIS® 620- based main boards
2. **Sound:** ESS-solo-1 sound driver
3. **Hardware monitoring :** CPU voltage/temperature and fan speed detection software
4. **Pccillin :** anti-virus protection software

1-6 Software Driver Installation

Unlike i440BX or i440LX, Windows-95 or Windows-98 still hasn't drivers for i810 chipset, **USER NEEDS TO INSTALL DRIVERS VERY CAREFULLY OR SYSTEM WILL HANG UP UNEXPECTEDLY!**

Load drivers from attached CD & find sub-directories under i810 directory as:

INTELINF..... (Setup driver for i810 chipset)
INF -- |
INFINSTV1.0(Setup driver for i810 chipset)
VGAPV10..... (VGA Driver)
DX61.....(DIRECTx61 Driver)
AD1881..... (Drivers for sound function)

User needs to install drivers

INTELINF → **INFINSTV1.0** → **VGAPV10** → **DX61** → **AD1881** as below

1. FOR WINDOWS 95:

- (1) Install Intel INFV1.0 file:
 - A. Install Window 95 OSR2 V2.0 or higher version firstly.
 - B. Install "USBSUPP" driver.
 - C. Load attached CD & find "INF" directory. Then find sub-directory named "Intel INF V1.0" & execute "Setup" file, during the selection procedure, to select: "Windows-95 with USB supplement "for OSR2 or higher version, if not, select: "Windows-95 without USB supplement" don't select "Windows-98".
- (2) Install InfinstV1.0 file
 - A. Back to find InfinstV1.0 sub-directory and execute "Setup", just answer Questions to complete it & restart system again(to update it to Win-95)

(3) VGA Driver Installation :

- A. Find directory VGAPV10 and Win9X sub-directory then execute SETUP and RESTART system.
- B. Find DX61 and execute DIRECTx61, then RESTART system to complete VGA drivers installation.

(4) Audio Driver Installation

- A. Find “AD1881 DRI” sub-directory, then find Win-95 sub-directory, then find “DRIVER 0040” execute “SETUP” & restart system.

2. FOR WINDOWS 98:

The installation procedures are similar to Windows 95, below are the differences :

- A. No need to install “USBSUPP” driver.
- B. When installing INTELINF & execute SETUP, select “Window-98”.
- C. When installing VGA and sound driver, select Win98 instead of Win95.

ons : When install Windows 95/98. Don't change the default directory path called "windows" or Sound chip AD1881 can't find correct path that causes user cannot complete installation.

Chapter 2 Installation

2-1 Layout Reference

2-2 Jumper Setting

There are many jumpers on this main board. Different setups have different functions. The following pages will tell how to set the jumpers under different circumstances.

2-2-1 Jumper Setting Table

CPU Speed	FSB Speed	S1			
		1	2	3	4
Celeron 300A	66MHz	ON	ON	OFF	OFF
Celeron 333	66MHz	ON	ON	OFF	OFF
Celeron 366	66MHz	ON	ON	OFF	OFF
Celeron 400	66MHz	ON	ON	OFF	OFF
Celeron 433	66MHz	ON	ON	OFF	OFF
Celeron 466	66MHz	ON	ON	OFF	OFF

*standard Celeron-A CPU is 2.2V of Vcore & 66MHz of front side bus speed.
The manufacturer shall have neither liability nor responsibility to any person or
entity with respect to any loss or damages arising by user's over-clocking or over-voltage.*

2-2-2 S1 : CPU Frequency Selector

S1 is a 4-pin DIP switch. Select the right frequency according to your CPU, and see details as below.

CPU FSB FREQ.	S1			
	1	2	3	4
66 MHz	ON	ON	OFF	OFF
75 MHz	OFF	OFF	ON	ON
83 MHz	OFF	OFF	ON	OFF
90 MHz	OFF	OFF	OFF	ON
95 MHz	OFF	OFF	OFF	OFF
100MHz	ON	ON	ON	ON

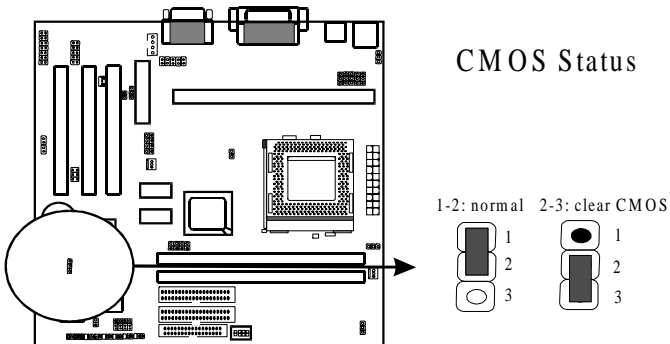

2-2-3 JP10 : Audio Function Selector

JP10 is a 3-pin jumper to enable/disable on board audio function. Set “1-2” to disable on board audio function and use AMR card installed on slot, set “2-3” to enable on board audio function and use MR card installed on slot.

2-2-4 CMOS Status

Please clear CMOS if password is forgotten. Below is the details to clear CMOS.

Procedure to clear CMOS:

Step 1: Shut down the system and disconnect the power supply from AC power.

Step 2: Pull out the power supply cable from the power connector.

Step 3: Short the CMOS jumper by putting jumper cap on Pin 2-3 for a few seconds.

Step 4: Return the cap to pin 1-2 at normal setup.

Step 5: Link the power cable to the connector & connect AC power to power supply.

Step 6: Turn on system power.

If you'd like to set password, press "Del" Key during system boot up to enter CMOS setup and establish a new password.

2-2-5 VID0-VID4--Switching Regulator for CPU Vcore Supply

VID0-VID4 are 3-pin jumpers which providing to regulate CPU Vcore Selector. Please select the right CPU Vcore according to your CPU and set as below.

VID4	VID3	VID2	VID1	VID0	CPU Vcore
1	0	0	0	0	3.5V
1	0	0	0	1	3.4V
1	0	0	1	0	3.3V
1	0	0	1	1	3.2V
1	0	1	0	0	3.1V
1	0	1	0	1	3.0V
1	0	1	1	0	2.9V
1	0	1	1	1	2.8V
1	1	0	0	0	2.7V
1	1	0	0	1	2.6V
1	1	0	1	0	2.5V
1	1	0	1	1	2.4V
1	1	1	0	0	2.3V
1	1	1	0	1	2.2V
1	1	1	1	0	2.1V
1	1	1	1	1	2.0V

0	0	0	0	0	2.05V
0	0	0	0	1	2.00V
0	0	0	1	0	1.95V
0	0	0	1	1	1.90V
0	0	1	0	0	1.85V
0	0	1	0	1	1.80V
0	0	1	1	0	1.75V
0	0	1	1	1	1.70V
0	1	0	0	0	1.65V
0	1	0	0	1	1.60V
0	1	0	1	0	1.55V
0	1	0	1	1	1.50V
0	1	1	0	0	1.45V
0	1	1	0	1	1.40V
0	1	1	1	0	1.35V
0	1	1	1	1	1.30V

2-3 Connectors

There are many connectors on this main board. Refer to the following pages for details.

2-3-1 Front Panel Connectors

Front panel has connectors such as “POWER SW.,” “TB-LED,” “HD-LED,” “RESET,” “SPEAKER,” “PW-LED,” ”KEYLOCK.” Please refer to the following further information.

POWER SW. is a 2-pin connector

TB-LED is a 2-pin Berg strip on case front panel indicates the current speed status of system.

HD-LED (Hard Disk activity LED connector) is a 2-pin keyed Berg strip. It is used to connect to front panel Hard Disk LED.

RESET is a 2-pin keyed Berg strip, connected to the push button reset switch on the case's front panel. Shorting both pin 1 & pin 2 can reset the system, which is similar to the power off and then on again.

SPEAKER is a 4-pin keyed Berg strip. It is used to connect to the case speaker to the main board for sound purpose.

PW-LED is a 3-pin connector. It is used to connect to the LED on the case front panel. The LED shows the status of the power.

KEYLOCK is a 2-pin connector. It is used to connect the key lock on the case front panel (if there is). Keyboard may be disconnected with the system through this function. Set to "on" to disconnect the connector with the system and "off" for normal status. Keylock using with JP2 connector.

2-3-2 Back Panel Connectors

Back Panel Connectors are GAME Port, MIC, LINE-IN, LINE-OUT, COM1/COM2, LPT, USB, PS/2 keyboard, and PS/2 mouse on case back panel. Refer to below details.

COM1 & COM2

The onboard serial port 1 and port 2 are the 9-pin D-subminiature male connector COM1 and COM2. COM1 and COM2 can be disabled in BIOS setup. Please refer to Chapter 3 “Integrated Peripherals” for more information.

KBD/PS2 MOUSE

The onboard PS/2 keyboard and mouse connectors are 6-pin Mini-Din connectors.

LPT

The onboard parallel port is a 25-pin female connector. It supports standard printer port, Enhanced Parallel Port (EPP), Extended Capabilities Port (ECP), Standard Parallel Port (SPP).

USB: USB (Universal Serial Bus) Connector

Universal Serial Bus connector, marked as “USB,” is used to connect USB devices. There are 2 USB connectors on this main board.

Midi/Game Port & External Audio Connectors

Midi/Game port has 15 pins connecting to the game joystick. External Audio connectors are “LINE-OUT, LINE-IN, MIC-IN” for audio functions.

2-3-3 ATX Power Supply Connector

ATX power connector has 20 pins, which is designed for ATX case especially. The ATX power supply supports the function of the “**Soft Power On Momentary switch**” which connects on the front panel switch to the 2-pin **SOFT-PWR** on the system board. While the power switch on the back of ATX power is turned on, the full power will not go into the system board until the front panel switch is momentarily pressed. Push the switch again to turn off the power to the system board.

To support i810 chipset, we suggest that Pin 17 signal 5VSB on ATX Power supply should be able to offer at least 750mA driving ability.

2-3-4 CPU Fan Connectors

There are 3 fan connectors on this system board, and it is marked as “CPUFAN”. Each fan connector has three pins.

Fan Signal

2-3-5 I.R. : IrDA Connector

IR connector supports wireless infrared module. With this module and application software like Laplink, or Win95 Direct Cable Connection, user can transfer data to or from laptops, notebooks, PDA and printers. This connector supports **HPSIR**, **ASKIR**, and **Fast IR**.

Attach Infrared module to IR connector. Be sure to put in the right orientation during attachment.

	IR4(normal IR)	IR3(consumer IR)
1	VCC	VCC
2		
3	IRRX	CIRRX
4	IRTX	CIRTX
5	GND	GND

2-3-6 Floppy Disk Connector

Floppy Disk Connector has 34 pins and is used to attach the floppy drive cable.

2-3-7 IDE1 & IDE2

IDE1 and **IDE2** are 39-pin IDE connectors (Ultra 66). **IDE1** is primary channel, and **IDE2** is secondary channel. Each channel supports 2 IDE devices, and 4 devices in total for this main board.

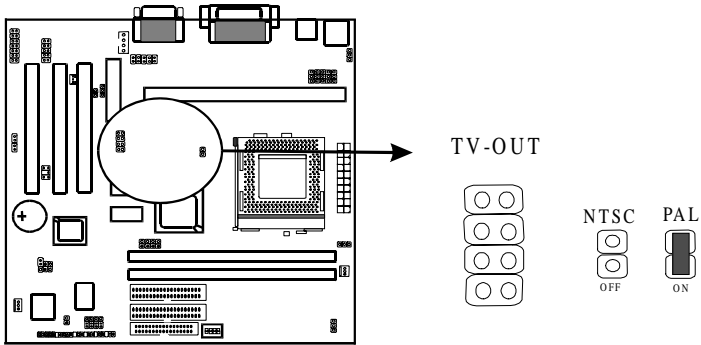

2-3-8 SB-Link Connector

SB-LINK is used to attach any “PC/PCI” standard sound card like Creative AWE64D or Yamaha XG...for compatibility under DOS mode.

2-3-9 TV-OUT Function & NTSC/PAL Connector

J1 is a 7-pin connector providing TV-OUT function. JP4 is a 2-pin connector providing to connect NTSC/PAL.(optional item)

2-3-10 CD-in

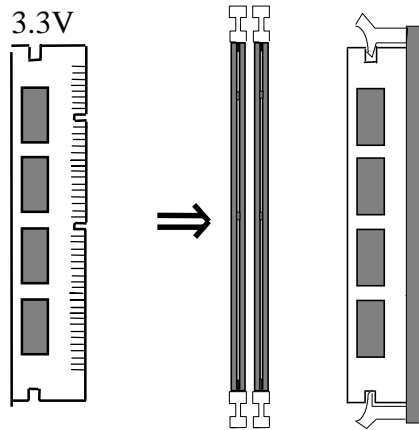

CD-in is a CD ROM external audio input signal to line-out(speaker) of the main board.

2-4 DIMM Installation

Please make sure DIMM is 3.3V DIMM. Either DIMM1 or DIMM2 supports 8 MB, 16 MB, 32 MB, 64 MB, and 128MB. Maximum memory for **SDRAM** is **up to 512 MB**. The user may insert DIMM modules in either DIMM1, or DIMM2.

Insert the module as shown. Due to different number of pins on either side of the breaks, the module will only fit in the orientation as shown. SDRAM DIMM modules have different pin contacts on each side and therefore have a higher pin density.

 RAM memory supports PC-100 DIMM or above.

Chapter 3 BIOS Setup

3-1 Award® BIOS CMOS Setup

CMOS Setup Utility - Copyright (C) 1984-1999

Standard CMOS Feature	Frequency/Voltage Control
Advanced BIOS Feature	Load Fail-Safe Defaults
Advanced Chipset Feature	Load Optimized Defaults
Integrated Peripherals	Set Supervisor Password
Power Management Setup	Set User Password
PnP/PCI Configurations	Save & Exit Setup
PC Health Status	Exit Without Saving

Hard Disk Configurations

1.IDE HDD Auto-Detection : press this item to Auto Detect the HDD type.

2.IDE Primary Master : select "AUTO" to detect the mode type automatically. Select "NORMAL" users have to redefine the following 4-8 items according to HDD. "NONE" means this item disabled.

3.ACCESS MODE : Select "AUTO" to detect the mode type automatically. If your hard disk supports the **LBA** mode, select "LBA" or "LARGE". However, if your hard disk cylinder is more than 1024 and does not support the LBA function, you have to set at "LARGE." Select "NORMAL" if your hard disk supporting cylinder is below 1024.

4. CYLS : the cylinder number of the hard disk.

5. HEAD : the read/write head number of hard disk. The range is from "1" to "16".

6.PRECOMP: the cylinder number at which the disk drive changes the write timing.

7.LANDZ : the cylinder number that the disk drive heads (read/write) are seated when the disk drive is parked.

8.SECTOR : the sector number of each track defined on the hard disk. The range is from "1" to "64".

Note1: if hard disk primary master/slave and secondary master/slave were set to "auto", the hard disk size and model will be auto detected on display during POST.

Note2: "halt on" is to determine when to halt the system by the BIOS if error occurred during POST.

The Award® BIOS supports 3 HDD modes: **NORMAL, LBA & LARGE.**

1. Normal mode

Generic access mode in which neither the BIOS nor the IDE controller will make any transformations during accessing.

The maximum number of cylinders, head & sectors for normal mode are **1024, 16 & 63.**

No. Cylinder	(1024)
X No. Head	(16)
X No. Sector	(63)
X No. Per Sector	(512)
<hr/>	
528 MB	

If user set this HDD to normal mode, the maximum accessible HDD size will be 528 MB even though its physical size may be greater than that!

2. LBA (Logical Block Addressing) Mode

A new HDD accessing method to overcome the 528 MB bottleneck. The number of cylinders, heads & sectors shown in setup may not be the number physically contained in the HDD. During HDD accessing, the IDE controller will transform the logical address described by sector, head & cylinder into its own physical address inside the HDD.

The maximum HDD size supported by LBA mode is 8.4 GB which is obtained by the following formula:

$$\begin{array}{r} \text{No. Cylinder} \quad (1024) \\ \text{X No. Head} \quad (255) \\ \text{X No. Sector} \quad (63) \\ \hline \text{X No. Bytes Per Sector} \quad (512) \\ \hline 8.4 \text{ GB} \end{array}$$

3. Large Mode

Extended HDD access mode supported by Award® software. Some IDE HDDs contain more than 1024 cylinder without LBA support (in some cases, users do not want LBA). The Award® BIOS provides another alternative to support these kinds of large mode:

<u>Cyls.</u>	<u>Head</u>	<u>Sector</u>	<u>Mode</u>
1120	16	59	NORMAL
560	32	59	LARGE

BIOS tricks DOS (or other OS) that the number of cylinders is less than 1024 by dividing it by 2. At the same time, the number of heads is multiplied by 2. A reverse transformation process will be made inside int 12h in order to access the right HDD address the right HDD address!

4. Maximum HDD Size:

$$\begin{array}{r} \text{No. Cylinder} \quad (1024) \\ \text{X No. Head} \quad (32) \\ \text{X No. Sector} \quad (63) \end{array}$$

X No. Bytes Per Sector (512)
1 GB

To support LBA or large mode of HDDs, there must be some softwares involved. All these softwares are located in the Award® HDD service routine (int 13h). It may be failed to access a HDD with LBA (large) mode selected if you are running under an operating system which replaces the whole int 13h. Unix operating systems do not support either LBA or large and must utility the standard mode. Unix can support drives larger than 528MB.

3-1-2 Advanced BIOS Features

Menu below shows all of the manufacturer's default values of this main board. Move the cursor by pressing <PageDown>/- or <PageUp>/+ key to modify the parameters, pressing [F1] key to display help message of the selected item. This setup program also provide 2 convenient ways to load the default parameter data from BIOS [F6] and [F7] area if shown data is corrupted. This provides the system a capability to recover from any possible error.

Virus Warning

:Enabled (default)

:Disabled

CPU Internal Cache

Enabled : enable L1 cache(default)

Disabled: disable L1 cache

External Cache

Enabled (default): enable L2 cache

Disabled: disable L2 cache

CPU L2 Cache ECC Checking

Enabled (default): enable L2 cache ECC checking

Disabled: disable L2 cache ECC checking

Quick Power On Self Test

This category speeds up power on self test.

Enabled (default) : BIOS will shorten or skip some check items.

Disabled: normal speed

First Boot Device

This category determines which drive the system searches first. System will search in turn for floppy disk drive; second is hard disk drive, and finally Floppy drive. Default value is “**FLOPPY**”. Options are as below:

FLOPPY; LS/ZIP; HDD-0; SCSI; CDROM; HDD-1; HDD-2; HDD-3; LAN;

Disable

Second Boot Device

This category determines which drive the system searches first. System will search in turn for floppy disk drive; second is hard disk drive, and finally Floppy drive. Default value is “**HDD-0**”. Options are as below:

**FLOPPY; LS/ZIP; HDD-0; SCSI; CDROM; HDD-1; HDD-2; HDD-3; LAN;
Disable**

Third Boot Device

This category determines which drive the system searches first. System will search in turn for floppy disk drive; second is hard disk drive, and finally Floppy drive. Default value is “**LS/ZIP**”. Options are as below:

**FLOPPY; LS/ZIP; HDD-0; SCSI; CDROM; HDD-1; HDD-2; HDD-3; LAN;
Disable**

Swap Floppy Drive

Enabled: floppy A&B will be swapped.

Disabled(default): floppy A&B will be not swapped.

Boot Up Floppy Seek

BIOS will determine if the floppy disk drive is 40 or 80 tracks. 360k type is 40 tracks while 720K/ 1.2M and 1.44M are all 80 tracks. Default value is **enabled**.

Boot Up Numlock Status

:On

:Off(default)

Gate A20 Speed

:Normal (default)

:Fast

Typematic Rate Setting

This determines the typematic rate.

Enabled: enable typematic rate and typematic delay programming.

Disabled (default) : disable typematic rate and typematic delay programming. The system BIOS will use default value of this 2 items and the default is controlled by keyboard.

Typematic Rate(Chars/Sec)

6 : 6 Characters Per Second (default)

-
- 8 : 8 Characters Per Second
 - 10 : 10 Characters Per Second
 - 12 : 12 Characters Per Second
 - 15 : 15 Characters Per Second
 - 20 : 20 Characters Per Second
 - 24 : 24 Characters Per Second
 - 30 : 30 Characters Per Second

Typematic Delay (Msec)

This is the interval between the first and second character displayed.

250 : 250 msec (default)

500 : 500 msec

750 : 750 msec

1000 : 1000 msec

Security Option

Item	Function	Note
Setup (default)	Security protection in CMOS setup menu	After setting password in BIOS CMOS “ Supervisor Password ” or User Password ,” it protects BIOS CMOS setup.
System	Security protection in system boot-up & BIOS setup	This function secures the system under system boot-up and BIOS setup after setting password.

OS Select For DRAM > 64MB

This option is especially set for OS2 operating system. Set “**Non-OS2**” for RAM memory over 64MB and set “**Non-OS2**” for other operating systems like Windows® 95/98 or NT.

:Non-OS2 (default)

:OS2

3-1-5 Power Management Setup

1. Choose “Power Management Setup” from the main menu, then press <Enter> key.
2. Set the item of “ACPI Function” to “Enabled.”
3. Choose “S3(STR)” on “ACPI Suspend Type.”
4. Press <Esc> at anytime to return to the main menu.
5. Choose “Save & Exit Setup” then press <Enter>, type <Y> then press <Enter>.
6. Before installing Windows® 98, please type below parameters.

If you had installed Windows®98 already, you have to update your system to support ACPI. About updating information, please contact with Microsoft technical support.

3C0 - 3CF	Enhanced Graphics Adapter
3D0 - 3DF	Color/Graphics Monitor Adapter
3F0 - 3F7	Diskette Drive Controller
3F8 - 3FF	Serial Port 1 (RS-232-C)
6E2 - 6E3	Data Acquisition Adapter 1
790 - 793	Cluster Adapter 1
AE2 - AE3	Data Acquisition Adapter 2
B90 - B93	Cluster Adapter 2
EE2 - EE3	Data Acquisition Adapter 3
1390 - 1393	Cluster Adapter 3
22E1	GPIB Adapter 1
2390 - 2393	Cluster Adapter 4
42E1	GPIB Adapter 2
62E1	GPIB Adapter 3
82E1	GPIB Adapter 4
A2E1	GPIB Adapter 5
C2E1	GPIB Adapter 6
E2E1	GPIB Adapter 7

Chapter 5 Q & A

5-1 Error Messages During Power on Self Test

During **power on self test (post)**, BIOS will automatically detect the system devices. Below are the questions that users may always meet. The user may press “**Esc**” key to skip the full memory test.

1. Beep sound

On power on, the system make beep sound to offer different messages. If the system is configured correctly, it prompts a short beep to show correct devices configuration is done correctly. When VGA card and DIMM modules are not plugged well, the system makes longer and constant beep sounds.

2. BIOS ROM checksum error

It indicates the checksum of the BIOS code is not right and system will always halt on power on screen. Contact the dealer to exchange a new BIOS.

3. CMOS battery fails

It indicates the CMOS battery does not work. Contact the dealer to exchange a new battery.

4. CMOS checksum error

It indicates the CMOS checksum is incorrect. Load the default values in BIOS to solve this problem. This error may result from a weak BIOS, so replace a new BIOS if necessary.

5. *Hard disk initialize*

Please wait a moment...

Some hard drives require more time to initialize.

6. *Hard disk install failure*

The system can not find or initialize the hard drive controller or the drive. Check if the controller is set correctly. If no hard disk is installed, “**Hard drive selection**” must be set to “**none.**”

7. *Keyboard error or no keyboard present*

This means the system can not initialize the keyboard. Check if the keyboard is plugged well and be sure no keys are pressed during POST.

8. *Keyboard is lock out - Unlock the key*

When this message comes out, check if there is anything mis-placed on the keyboard. Be sure nothing touches the keys.

9. *Memory test fails*

There will be more information to specify the type and location of the memory error.

10 *Primary master hard disk fail*

The BIOS find an error in the primary master hard disk drive.

11 *Primary slave hard disk fail*

The BIOS finds an error in the primary slave hard disk drive.

12 *Secondary master hard disk fail*

The BIOS finds an error in the secondary slave master hard disk drive.

13 *Secondary slave hard disk fail*

The BIOS finds an error in the secondary slave IDE hard disk drive.
