Manufacturer Notice(IMPORTANT)

This manual covers two different layout models of 486 PCI Green All-in-one mother board which are manufacturer currently offer to market. The respective board layout outline are shown on Chapter 1.4. Please refer to the following description to make sue which model you have before reading.

486 PCI BUS All-In-One Mother Board Specification

Model	486TL	486PL
CPU	3.3V/5V 486 or 5x86 CPU	3V / 5V 486 or 5x86 CPU
ZIF socket	Yes	Yes
System Chipset	SiS 496/497 Dark green	SiS 496/497 Dark green
VGA Chipset	PCI Bus Cirrus 54M30	PCI Bus Cirrus 54M30
Video RAM	512K - 2MB	512K - 2MB
VGA Feature Connector	Yes	Yes
IDE1, IDE2	Yes	Yes
Multi-I/O	Enhance LGS Prime 3C	Enhance SMC37C665/669
External Cache	up to 512KB	up to 512KB
Expansion Slot	Extension for PCI/ISA Bus	Extension for PCI/ISA Bus
PCI slot ID select (max. 3 PCI slot on raiser card)	PCI 1 : AD23 PCI 2 : AD22 PCI 3 : AD21	PCI 1 : AD23 PCI 2 : AD22 PCI 3 : AD21
Location of Expansion Slot	On 6th Slot of STD M/B	On 7th Slot of STD M/B
Keyboard Jack	STD PC/AT or Two mini DIN	Two mini DIN
PS/2 Mouse port	Optional	Yes
VGA & Multi I/O pin Header	Yes	No
SIMM Socket	72Pin * 2	72Pin * 2
Form Factor	PC/AT	WD/LPX
Dimension	220x220mm 8.66"x8.66"	200x220mm 7.87"x8.66"

Chapter 1 : Introduction

Your 80486 All-In-One PCI motherboard is a full-featured IBM PC/AT compatible board offering a unique modular architecture that lets you upgrade the system by simply replacing the CPU.

The board supports following CPUs:

- Intel/AMD 486DX/DX2/DX4
- Intel 486X
- Intel SL SX and Intel SL DX/DX2/DX4
- Intel P24T and P24D
- Cyrix 486 M7
- Cyrix 5x86
- AMD Enhanced DX/DX2/DX4 (V8B/V8T)/5x86 P-75
- IBM 486/5x86C
- ST486 DX2/DX4

The board's optional high-performance 32-or 64-bit Peripheral Component Interconnect (PCI) local bus lets you add highly integrated peripheral controller components, peripheral add-on boards, and processor/memory systems. The board's Industry Standard Architecture (ISA) bus slot allows you to choose from thousands of 8 bit or 16 bit industry-standard add-on boards.

A floppy disk drive controller, VGA display circuitry, PS/2 mouse connector serial ports (16C550), and parallel port (with EPP and ECP mode) are included so that you can easily connect peripheral devices without using expansion slots. In addition, an IDE hard disk driver controller is included so that you can connect up to four IDE hard disk drives.

The main board is fully compatible with the thousands of software applications developed for IBM PC/AT compatible computers. The control logic provides high-speed performance for the most advanced multi-user, multitasking applications available today.

ENDAT-486PL/TL

1.1 Features

The main board offers the following advanced features:

- High-speed upgradeable CPU.
- Selectable CPU voltage : 3.3V, 3.45V, 4.0V, and 5.0V.
- On-board clock generator lets you change CPU speed by jumper switch to 2X, 2.5X, 3X, 4X clock.
- ZIF (Zero-Insertion Force) CPU socket.
- On-board VGA display circuitry.
- On-board PS/2 mouse connector.
- EISA expansion slot includes both PCI & ISA signal.
- Auto-detected of installed DRAM memory.
- Support DRAM "Table free" configuration.
- Support Extended Data Out (EDO) SIMM module
- Optional 128KB, 256KB, or 512KB SRAM.
- Supports 512KB(min), 1MB, or 2MB (max) video memory.
- On-board IDE hard disk drive controller : supports up to Mode 4 hard disk drives.
- Support IDE 2
- On-board peripheral ports: Two on-board serial ports (16C550).
- Parallel port with bi-direction lines: Supports Enhanced Parallel Port (EPP) & Extended Capabilities Port (ECP).
- Supported L2 cache up to 512KB
- On-board floppy disk drive controller.
- Licensed AWARD BIOS.
- Selectable BIOS type: EPROM, Flash (Optional) ROM.
- Lithium coin battery.
- Hardware "Green" function support.
- Support CPU "stop clock" mode for Intel/Cyrix CPUs
- On-board FDC/HDC/serial/parallel port can be disabled by BIOS.
- On-board VGA can be disabled by jumper setting.
- All I/O port address and IRQ can be setting by BIOS.

1.2 Unpacking

The main board comes securely packaged in a sturdy cardboard shipping carton. In addition to this User's Guide, the shipping carton contains:

- The 486 All-in-One PCI main board
- Cables: IDE and FDD.
- IDE Drivers distribution floppy disk: includes drivers for Windows 3.1, Windows NT 3.x, OS2 and Novell Netware.
- VGA Utilities and Software Drivers distribution floppy disks.

If any of these items is missing or damaged, contact the dealer from whom you purchased the main board. Save the shipping materials and carton in case you want to ship or store the board in the future.

NOTE: *Leave the main board in its original packing until you are ready to install it.*

1.3 Electrostatic Discharge Precautions

Make sure you ground yourself before handling the mainboard or other system components. Electrostatic discharge can easily damage the components. Note that you must take special precaution when handling the mainboard in dry or air-conditioned environments.

1.4 Mainboard Layout

486PL System Mainboard Outline

ENDAT-486PL/TL

486TL System Mainboard Outline

ENDAT-486PL/TL

Chapter 2 : Setting Up the Main Board

This chapter describes getting your main board ready for operation.

It includes instructions for:

- Installing a CPU upgrade
- Installing DRAM memory, SRAM cache memory, and video memory
- Make sure and correct CPU operating voltage, jumper setting and frequency.
- Make sure the direction of the CPU, otherwise the CPU will to be burn out, even burn the main board also.
- It also provides descriptions of making board connections and replacing the lithium battery.

2-1 Jumper and Connector

Function of Jumpers

CPU TYPE	JP7-JP10, JP16, JP21-JP30
CPU VOLTAGE	JP32,JP33
CPU CLOCK	JP17
CACHE SIZE	JP18, JP19
PCI SLOT CLOCK	JP13
ON-BOARD VGA	JP5
CLEAR CMOS	JP6
COLOR/MONO DISPLAY	JP14
IR FUNCTION	JP3, JP4
POWER GOOD	JP20
BUZZER ON/OFF	JP31
CPU CLOCK	JP12

JP3 & JP4 : IR FUNCTION SETTING

1-2 : IF U3 IS 665IR, IR VIA CN7

2-3 : IF U3 USE 665GT/669, U3 USE 665IR NOT USE IR
FUNCTION.

JP5 : ON-BOARD VGA ENABLE/DISABLE

VGA chip	JP5
ENABLE	1-2 (DEFAULT)
DISABLE	2-3

JP6 : CLEAR CMOS

1-2	NORMAL (DEFAULT)
2-3	CLEAR

JP12 : CPU CLOCK

1-2	CPUCLK = ACLK
2-3	CPUCLK = ACLK + DELAY TIME (DEFAULT)

JP13 : BUS CLOCK SELECT

1-2 : IF CPU CLOCK \leq 33MHz (PCICLK = CPUCLK)

2-3 : IF CPU CLOCK $>$ 32MHz (PCICLK = CPUCLK/2)

JP14 FOR COLOR or MONO DISPLAY

COLOR	SHORT
MONO	OPEN

JP31 : BUZZER ON / OFF

SHORT : ON

OPEN : OFF

OTHER JUMPER SETTING

JP20	POWER GOOD SIGNAL
1-2	POWER SUPPLY
2-3	INTERNAL(DEFAULT)

J1 : FOR EXTERNAL BATTERY

PIN 1 : BATTERY +

PIN 4 : BATTERY -

J2 : POWER CONNECTOR

J3 : BREAK SWITCH

J4 : FRONT PANEL CONNECTOR

RESET	HD LED	TB LED	TB-SW
SPK		KBLOCK	

CONNECTOR OVERVIEW :

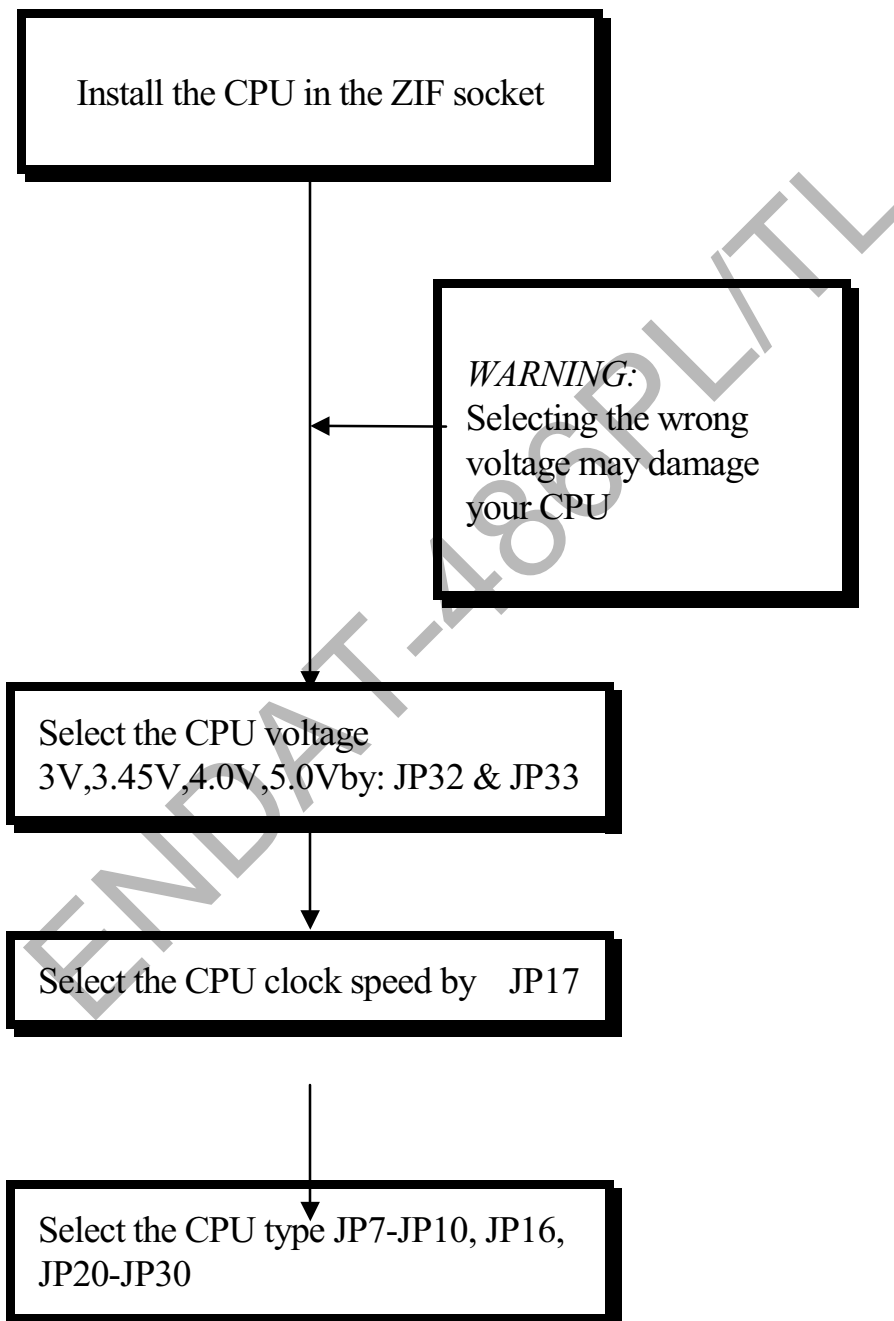

CN1 : PS/2 Keyboard connector	CN6 : VGA connector
CN2 : PS/2 Mouse connector	CN7 : IR connector
CN3 : COM1 or COM3	CN8 : Feature connector
CN4 : COM2 or COM4	CN9 : FDD connector
CN5 : Printer port	CON1 : IDE1
	CON2 : IDE2

CN2A : PS/2 MOUSE PORT CONNECTOR (486TL ONLY)

Pin 1	MS-Data
Pin 2	X
Pin 3	GND
Pin 4	Vcc
Pin 5	MS-CLK
Pin 6	X

2-2 Installing a CPU: Overview

The flowchart below illustrates the procedures that you will follow to install a CPU.

2-3 Installing a CPU upgrade

You can upgrade your main board by simply replacing the CPU and changing the settings of jumper switches on the board. The board supports the following high-performance CPUs:

- Intel/AMD 486DX/DX2/DX4
- Intel 486SX
- Intel SL SX and Intel SL DX/DX2/DX4
- Cyrix 486 M7(ST, IBM)
- Cyrix 5x86
- AMD Enhanced DX2/DX4 Writeback/Writethrough
- AMD Enhanced SX Writeback

2-3-1 CPU OPERATION VOLTANG SETTING by JP32, JP33

		3.3 V	3.45 V	4.0 V	5.0V
JP32	1-2	SHORT	OPEN	OPEN	N/A
JP32	3-4	OPEN	SHORT	OPEN	N/A
JP32	5-6	OPEN	OPEN	SHORT	N/A
JP33	CLOSE	1-3,2-4	1-3,2-4	1-3,2-4	1-2,3-4

2-3-2 CPU AND BUS CLOCK SPEED SETTING by JP13, JP17

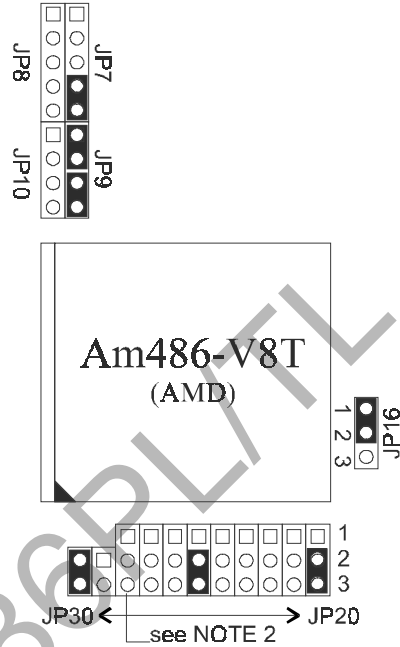

CPU CLOCK SELECT (JP17 OHLY)				
JP13	1-2	1-2	2-3	2-3
JP17	25Mhz	33 MHz	40 MHz	50 MHz
1-2	OPEN	SHORT	SHORT	OPEN
3-4	OPEN	SHORT	OPEN	SHORT
5-6	OPEN	OPEN	OPEN	OPEN

2-3-3 CPU TYPE SETTING FOR 486PL

1. Am486 V8B(DX2/DX4)

2. Am486 V8T(DX2/DX4)

3. AMD 5x86-P75

4. Intel 486SX

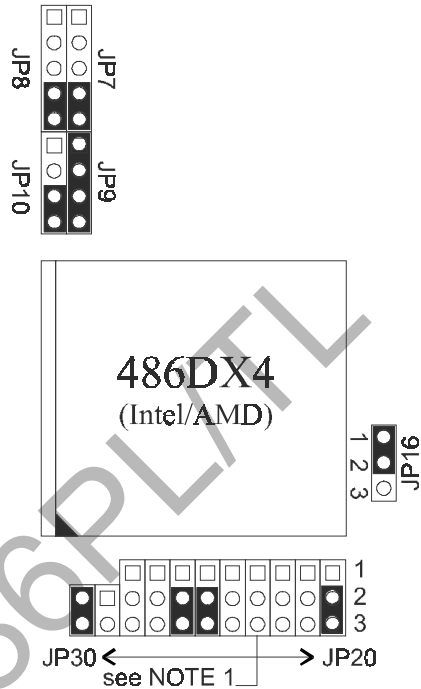

CPU TYPE SETTING FOR 486PL

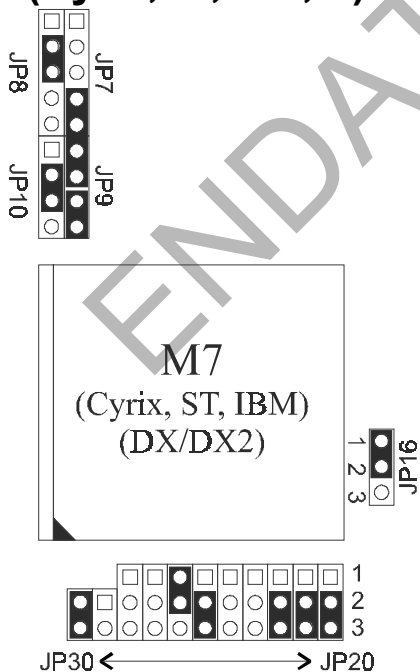

5. Intel/AMD 486DX/DX2 (5V)

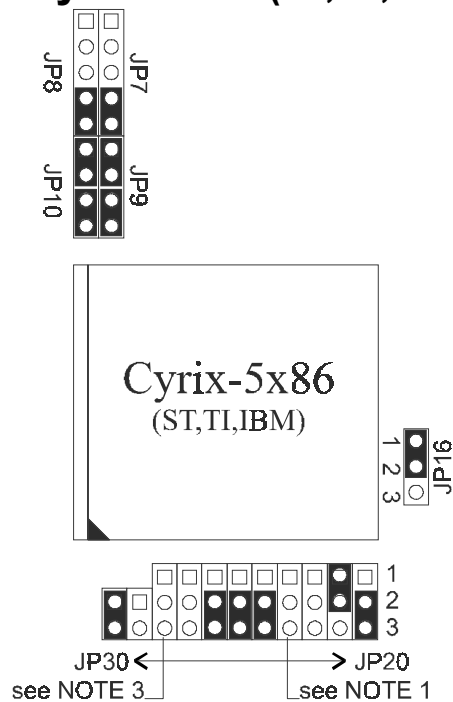

6. Intel 486DX4

7. M7 (Cyrix, ST, IBM, TI)

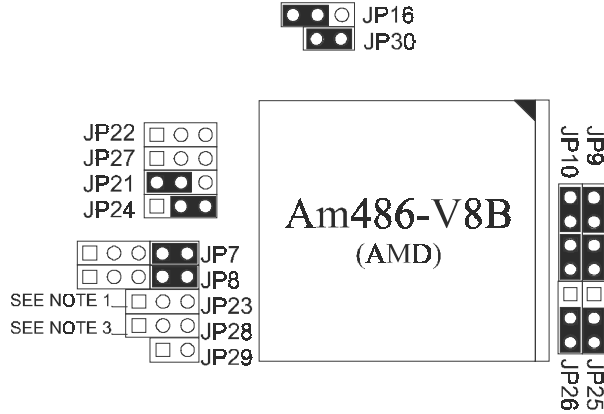

8. Cyrix -5x86 (ST, TI, IBM)

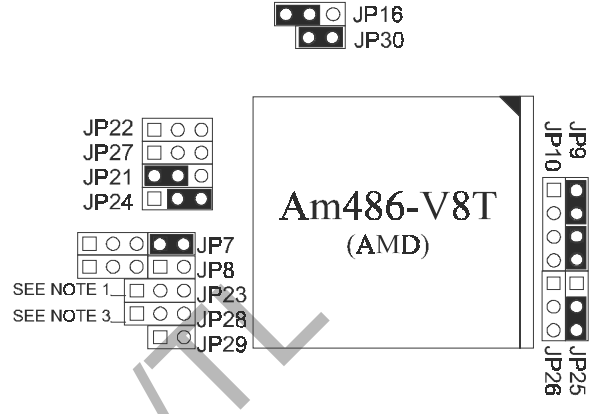

2-3-4 CPU TYPE SETTING FOR 486TL

1. Am486 V8B (DX2/DX4)

2. Am486 V8T (DX2/DX4)

3. AMD 5x86-P75

4. Cyrix-5x86 (ST, IBM, TI)

CPU TYPE SETTING FOR 486TL

5. Intel/AMD 486DX/DX2 (5V)

P24D/Am5x86-P75/Am486-V8B

1-2	WRITE	BACK
2-3	WRITE	THROUGH

2-4 Installing Memory

The main board accepts combinations of SIMMs with different sizes; furthermore, you can install SIMMs in either socket. Depending on the desired memory capacity and the SIMM size, you can install one or two SIMMs on the board. The board automatically detects installed SIMMs; no configuration via jumper switches or BIOS setup is necessary.

The main board support two types of RAM module:

- **Dynamic Random-Access Memory (DRAM)** packaged in Single in-Line Memory Modules (SIMMs). These modules occupy sockets on the main board and provide total of from 1MB to 128MB of on-board system memory
- **Extended Data Output(EDO) RAM** Module also available

2-5 Installing SRAM Cache Memory

Static Random-Access Memory (SRAM). These optional memory chips occupy sockets on the main board and provide 128KB, 256KB, or 512KB of CACHE memory.

Install SRAM cache memory chips in on-board sockets as follows:

1. When installing the 8Kx8 or 32Kx8 SRAM chips please make sure that the four pins at the pin 1 of the socket are exposed.
2. Carefully but firmly press the chip into the socket, applying even pressure to both ends of the chip.
3. Set jumpers JP18, JP19 to choose 128KB, 256KB, or 512KB of jumper setting.

CACHE MEMORY SIZE JUMPER SETTING

CACHE SIZE	JP18	JP19	U22, U25 U28, U30	(TAG RAM) U24
128 KB	1-2	1-2	32K x 8	8 K x 8
256 KB	1-2	2-3	64K x 8	32 K x 8
512 KB	2-3	2-3	128K x 8	32 K x 8

2-6 Installing VGA DRAM

The main board supports 512KB, 1MB, or 2MB video memory. The amount of video memory on your system board determines the number of colors and the video graphics resolutions.

For 512K video memory upgrade to 1MB, install video RAM on U10 sockets

For 1MB video memory upgrade to 2MB, install video RAM on U9,U11 sockets

2-7 Install Raiser Card (Max 3 PCI slot on raiser card)

PCI slot No.	IDSEL	INT #
PCI 1	AD23	A, B, C, D
PCI 2	AD22	B, C, D, A
PCI 3	AD21	C, D, A, B

CAUTION:

Can not insert PCI bus Add-On card into On-board expansion slot directly.

Chapter 3. Award BIOS Setup

Use the CMOS Setup program to modify the system parameters to reflect the environment installed in your system and customize the system as desired. By pressing the <DEL.> key to enter the CMOS Setup Program when turn on the power. By windows-driven the AWARD BIOS Setup can be accessed via arrow keys and press <Enter> to choose a option to configure to system properly.

In the main menu, press F10 or “SAVE & EXIT SETUP” to save your changes and reboot the system. Choosing “WXIT WITHOUT SAVING” to ignore the changes and exit the setup procedure. Pressing <ESC> at anywhere during the setup will return to the main menu.

Due to the “THE BIOS FEATURE SETUP”, “CHIPSET FEATURE SETUP” and “PCI CONFIGURATION SETUP” require the board knowledge on PCI/AT system architecture and SIS 85c496/497 system chipset specification. They are intended to be used by well-trained technicians and experienced user. Incorrect setup could cause system malfunction.

3.1 Quick Setup

In most cases, you can quickly configure the system by following procedure. The manufacturer highly recommends you to use ‘Quick Setup’ for setting CMOS to avoid any unpredictable results.

1. Choose “STANDARD CMOS SETUP” from the main menu., configure the date and time, hard disk type, floppy diskette drive type, etc..
2. Choose “LOAD SETUP DEFAULTS” form the menu for loading the defaults from the BIOS Feature Setup and Chipset Features Setup which is set by manufacture for most stable normal configuration.
3. Make sure what is your internal cache access mode of CPU and choose

the ‘CPU Internal Cache’ of “CHIPSET FEATURES SETUP” to match it’s mode.

4. Press F10 or “SAVE & EXIT SETUP” to save the changes and reboot the system.

3.2 Description of BIOS setup options

Please make clearly the means of those option parameters, improper setting will cause hang or get bad performance. Most items are very clear to understand from the screen prompt. A few special important item will describe below. The manufacturer highly recommend you to use the “Default” setting to avoid any unpredictable results.

OPTION	FUNCTION
STANDARD CMOS SETUP	Configure the date & time, H/Fdd type etc.
BIOS FEATURE SETUP	Configure advanced system options such as dis/enabled cache and shadow ram.
CHIPSET FEATURE SETUP	Setting advanced chipset options such as bus clock, DRAM, Cache speed.
POWER MANAGEMENT SETUP PCI CONFIGURATION SETUP	Setup the CPU Internal Cache access mode with “Write-Thru” or “Write-Back” En/disabled the on board HDC/FDC controller. Select the address for I/O ports. Enable Power saving/Green function Setting PCI configuration such as INT#,IRQ etc.
LOAD SETUP DEFAULTS	Load optimized BIOS setting
PASSWORD SETTING	Enable the password checking for system security
IDE HDD AUTO DETECTION	Auto detect the HDD type
HDD LOW LEVEL FORMAT	Perform the low level format for hard disk
Virus Warning	When enabled, any attempt to write to the boot sector or partition table will halt the system and cause a warning prompt

Boot Up System Speed	Choose the system boot-up with High or Low speed 'Setup' - Checking the password only when you attempt to enter the CMOS Setup.
Security Option	'System' - Checking the password when system booted each time. In case of forgetting the password please use JP6 to clear the CMOS data and perform the BIOS setup again.

ENDAT-486PL/TL

Appendix A. Flash Memory Utility

If your main board has flash memory, you can use this utility to update the system BIOS from a disk file. Be aware that the improperly changing the system BIOS will cause the system to malfunction.

Using utility as follows:

1. Insert the Flash Memory Utility distribution floppy diskette in drive A:
2. At the DOS prompt, type A:>AWDFLASH and press <Enter>

FLASH MEMORY WRITER v1.2 Copyright © 1993, Award Software, Inc.	
For SIS501-3A0IA00 Flash Type -	02/21/1995
File Name to Program :	
Error Message :	

3. Enter the name of the system BIOS disk file in the File Name to Program field. The following message appears in the Error Message field:
Are you sure to program (y/n) ?
4. To update the flash memory from the system BIOS disk file, type Y.
5. After complete updating please re-boot the system.
