## Before You Start

This Online Manual will introduce to the user how this product is installed. All useful information will be described in later chapters. Please keep this manual carefully for future upgrades or system configuration changes. This Online Manual is saved in PDF format, we recommend using Adobe Acrobat Reader 4.0 for online viewing, it is included in Bonus CD disc or you can get free download from Adobe web site.

Although this Online Manual is optimized for screen viewing, it is still capable for hardcopy printing, you can print it by A4 paper size and set 2 pages per A4 sheet on your printer. To do so, choose File > Page Setup and follow the instruction of your printer driver.

Thanks for the help of saving our earth.

## Overview

Thank you for choosing AOpen DX34R-U motherboard. The DX34R-U is Intel ${ }^{\circledR}$ Socket 370 motherboard (M/B) based on the ATX form factor featuring the VIA Apollo Pro 133T chipset. As high performance chipset built in the M/B, the DX34R-U motherboard can support dual CPU for Intel ${ }^{\circledR}$ Socket 370 series Pentium ${ }^{\circledR}$ III (Both Coppermine \& Tualatin* are supported) \& Celeron ${ }^{\text {TM* }}$ processor and $66 / 100 / 133 \mathrm{MHz}$ Front Side Bus (FSB) clock. In the AGP performance, it has one AGP slot and supports AGP 1X/2X/4X mode and pipelined spilt-transaction long burst transfer up to $1056 \mathrm{MB} / \mathrm{sec}$. According to different customer's requirements, 32, 64, 128, 256 and 512MB SDRAM DIMM modules can be applied to the motherboard and the maximum memory size can be up to 2 GB. The on-board IDE controller supports Ultra DMA 33/66/100 mode and the transfer rate up to $100 \mathrm{MB} / \mathrm{s}$. DX34R-U equipped with a Promise ${ }^{\circledR}$ FastTrak $^{\text {TM }} 100$ Lite IDE RAID controller that provides high performance and fault tolerance. Further flexibility can be achieved by taking advantage of the Communication and Network Riser (CNR) card option that allows audio, modem on a single baseboard design. More than that, on the strength of LSI 80225 PHY on board, which is an highly-integrated Platform LAN Connect device, it provides 10/100M bps Ethernet for office and home use. Besides, the DX34R-U motherboard has an AD 1885 AC97 CODEC chipset onboard for provides high performance and magic surround stereo sound to let people enjoy working with it. Now, enjoy all features from AOpen DX34R-U motherboard.

*Note 1: Only the Tualatin CPU with 512 K cache are supported on this dual CPU motherboard.
*Note 2: Only one Celeron CPU can be inserted on this dual CPU motherboard.

## Feature Highlight

## CPU

Supports dual CPU Intel ${ }^{\oplus}$ Socket 370 Pentium ${ }^{\oplus}$ III (Both Coppermine \& Tualatin* are supported) \& Celeron ${ }^{\top \mathrm{TM} *}$ $533 \mathrm{MHz} \sim 1.2 \mathrm{GHz}+$ with $66 / 100 / 133 \mathrm{MHz}$ Front Side Bus (FSB) designed for Socket 370 technology. In consistent with AOpen's delicate design with terminator circuit implemented on CPU socket 2 , please use CPU socket 1 if only one CPU is going to be installed. Additionally, we highly recommend you to install the same types of CPU if two CPU are installed.
*Note 1: Only the Tualatin CPU with 512 K cache are supported on this dual CPU motherboard.
*Note 2: Only one Celeron CPU can be inserted on this dual CPU motherboard.

## Chipset

With the VIA Apollo Pro 133T chipset, this motherboard contains the various controller inclusive of 32-bit Accelerated Graphics Port (AGP), 32-bit PCI bus and 64-bit advanced high performance DRAM. Because of its powerful features, CPU Front Side Bus (FSB) of DX34R-U can operate easily at $66 / 100 / 133 \mathrm{MHz}$. This chipset also supports Ultra DMA $33 / 66 / 100$ (with VIA ${ }^{\circledR}$ VT82C694T and CT8231) EIDE, USB and keyboard/ PS2 Mouse interface plus RTC/CMOS on chip.

## Expansion Slots

Including five $32-$-bit/33MHz PCI, one CNR and one AGP 4 X slots. The PCI local bus throughput can be up to $132 \mathrm{MB} / \mathrm{s}$. The Communication \& Nectworking Riser (CNR) slot provided from DX34R-U motherboard can support CNR interface for a Modem/Audio card. The Accelerated Graphics Port (AGP) specification provides a new level of video display sophistication and speed. The AGP video cards support data transfer rate up to $1056 \mathrm{MB} / \mathrm{s}$. As DX34R-U motherboard includes one AGP expansion slot for a bus mastering AGP graphic card, For AD and SBA signaling, DX34R-U motherboard can support 133MHz 2X/4X mode. Of five PCl slots provided, DX34R-U supports all master PCI slots for arbitration and decoding functions.

## Memory

Provides four 168-pin SDRAM DIMM socket that support up to 2 GB of PC-100/133 compliant SDRAM (Synchronous Dynamic Random Access Memory). 32, 64, 128, 256 and 512MB SDRAM DIMM modules are supported.

## LAN Port

On the strength of LSI 80225 PHY on board, which is an highly-integrated Platform LAN Connect device, it provides 10/100 Mbps Ethernet for office and home use.

## Ultra DMA 33/66/100 Bus Mater IDE

Comes with an on-board PCI Bus Master IDE controller with two connectors that supports four IDE devices in two channels, supports Ultra DMA 33/66/100, PIO Modes 3 and 4 and Bus Master IDE DMA Mode 5, and supports Enhanced IDE devices.

## On-board ATA/100 IDE RAID

1. Supports data striping (RAID 0) and mirroring (RAID 1). Provides dramatic increase in drive performance and/or fault tolerant options. Offers performance customization and data rebuilds from the BIOS menu. Mirroring supports automatic background rebuilds. Fault tolerance can be restored automatically without rebooting.
2. Supports up to four IDE drives which capacities are more than 8.4 GB on the two IDE RAID connectors while still supporting four IDE devices on the motherboard. The burst data transfer rates can up to $100 \mathrm{MB} / \mathrm{s}$ from ATA/100 drives to boot overall system performance.
3. Supports IDE Bus Master operation allows multi-tasking during disk drives transfer which increase CPU efficiency, then the CPU is free to process task during IDE data transfer through PCI bus interface to/from system memory.

## On-board AC97 Sound

DX34R-U M/B uses the AD 1885 AC97 sound chip. This on-board audio includes a complete audio recording and playback system.

## Four USB Connectors

Providing two ports, four USB connectors for USB interface devices, such as mouse, keyboard, modem, scanner, etc.

## Dr. LED

The Dr. LED has 8 LEDs on the DX34R-U motherboard can easily shows what kind of problems you may encounter.

## Power Management/Plug and Play

The DX34R-U Motherboard supports the power management function that confirms to the power-saving standards of the U.S. Environmental Protection Agency (EPA) Energy Star program. It also offers Plug-and-Play, which helps save users from configuration problems, thus making the system much more user-friendlier.

## Hardware Monitoring Management

Supports CPU or system fans status, temperature and voltage monitoring and alert, through the on-board hardware monitor module.

## Enhanced ACPI

Fully implement the ACPI standard for Windows ${ }^{\circledR} 98 / M E / 2000$ series compatibility, and supports Soft-Off, STR (Suspend to RAM, S3), STD (Suspend to Disk, S4), WOM (Wake On Modem), WOL (Wake On LAN) features.

## Super Multi-I/O

The DX34R-U provides two high-speed UART compatible serial ports and one parallel port with EPP and ECP capabilities.

## Quick Installation Procedure

This page gives you a quick procedure on how to install your system. Follow each step accordingly.

1. Installing $\underline{C P U}$ and Fan
2. Installing System Memory (DIMM
3. Connecting Front Panel Cable
4. Connecting IDE and Floppy Cable
5. Connecting ATX Power Cable
6. Connecting Back Panel Cable
7. Power-on and Load BIOS Setup Default
8. Setting CPU Frequency
9. Reboot
10. Installing Operating System (such as Windows 98)
11. Installing Driver and Utility

## Motherboard Map

## Block Diagram

## Hardware Installation

This chapter describes jumpers, connectors and hardware devices of this motherboard.

Note: Electrostatic discharge (ESD) can damage your processor, disk drives, expansion boards, and other components. Always observe the following precautions before you install a system component.

1. Do not remove a component from its protective packaging until you are ready to install it.
2. Wear a wrist ground strap and attach it to a metal part of the system unit before handling a component. If a wrist strap is not available, maintain contact with the system unit throughout any procedure requiring ESD protection.

## About "Optional" and "Upgrade Optional"...

When you read this online manual and start to assemble your computer system, you may find some of functions are called "Optional", and some are called "Upgrade Optional". Though all AOpen motherboards include many amazing and powerful features, in some situations, these powerful features are not used to every user. Hence, we changed some key features as "Optional" for you to choose. Some optional functions that can be upgraded by users, we call them "Upgrade Optional". As for those optional functions that can't be upgraded by ourselves, we call them "Optional". If needed, you can contact our local distributors or resellers for purchasing "Upgrade Optional" components, and again you can visit AOpen official web site: www.aopen.com.tw for more detail information.

## JP14 Clear CMOS Data

You can clear CMOS to restore system default setting. To clear the CMOS, follow the procedure below.

1. Turn off the system and unplug the $A C$ power.
2. Remove ATX power cable from connector PWR2.
3. Locate JP14 and short pins 2-3 for a few seconds.
4. Return JP14 to its normal setting by shorting pins $1 \&$ pin2.
5. Connect ATX power cable back to connector PWR2.

Normal Operation
1

Clear CMOS

Tip: When should I Clear CMOS?

1. Boot fail because of overclocking...
2. Forget password...
3. Troubleshooting...

## CPU Installation

This motherboard supports Intel ${ }^{\oplus}$ Pentium $I I I^{\oplus}$ (Both Coppermine and Tualatin with 512 K Cache are supported) and one Celeron ${ }^{\mathrm{TM}}$ Socket 370 series CPU. In consistent with AOpen's delicate design with terminator circuit implemented on CPU socket 2 , please use CPU socket 1 if only one CPU is going to be installed. Be careful of CPU orientation when you plug it into CPU socket. We highly recommend you to install the same types of CPU if two CPU are installed.

1. Pull up the CPU socket level and up to 90 -degree angle.
2. Locate Pin 1 in the socket and look for a black dot or cut edge on the CPU upper interface. Match Pin 1 and cut edge, then insert the CPU into the socket.

Note: These pictures are for example only, it may not exactly be the same motherboard.
3. Press down the CPU socket level and finish CPU installation.

Note: If you do not match the CPU socket Pin 1 and CPU cut edge well, it may damage the CPU.

Note: This socket supports FC-PGA /FC-PGA2 package CPU, which is the latest CPU package developed by Intel. We strongly recommend you not to insert former PPGA-package CPU onto it.

Note: These pictures are for example only, it may not exactly be the same motherboard.

## JP23 FSB/PCI Clock Ratio

This jumper is used to specify the relationship of PCI and $\underline{\text { FSB clock. Generally speaking, if you are not overclockers, we }}$ recommend you to set at the default setting.

Warning: VIA Apollo Pro $133 T$ chipset supports maximum 133 MHz FSB and 66 MHz AGP clock, higher clock setting may cause serious system damage.

FSB $=133 \mathrm{MHz}$

FSB $=66 \mathrm{MHz}$

## PCI Clock = CPU FSB Clock / Clock Ratio <br> AGP Clock = PCI Clock x 2

| Clock Ratio | CPU (Host) | PCI | AGP | Memory |
| :--- | :--- | :--- | :--- | :--- |
| $2 X$ | 66 MHz | 33 MHz | 66 MHz | PCI $x 3$ |
| 2 X, overclocking | 75 MHz | 37.5 MHz | 75 MHz | PCI $x 3$ |
| $3 X$ | 100 MHz | 33 MHz | 66 MHz | PCI $x 3$ |
| $3 X$, overclocking | 110 MHz | 36.7 MHz | 73 MHz | PCI $\times 3$ |
| $4 X$ | 133 MHz | 33 MHz | 66 MHz | PCI $x 3$ or $x 4$ |
| $4 X$, overclocking | 147 MHz | 36.8 MHz | 73 MHz | PCI $\times 3$ or $x 4$ |

Warning: VIA 694T chipset supports maximum 133 MHz FSB and 66 MHz AGP clock, higher clock setting may cause serious system damage.

## CPU Jumper-less Design

CPU VID signal and SMbus clock generator provide CPU voltage auto-detection and allows the user to set the CPU frequency through the BIOS setup, therefore no jumpers or switches are used. The disadvantages of the Pentium based jumper-less designs are eliminated. There will be no worry of wrong CPU voltage detection.

## Full-range Adjustable CPU Core Voltage

This function is dedicated to overclockers, AOpen works together with SEHTECH to develop a special chip SC1189 that supports Adjustable CPU Core Voltage from 1.05 V to 1.825 by 0.05 V stepping. But this motherboard can also automatically detect CPU VID signal and generates proper CPU core voltage.

```
BIOS Setup > Frequency/Voltage Control > CPU Voltage Setting
```

Warning: Higher CPU core voltage may be able to increase CPU speed for overclocking, but you may damage the CPU or reduce the CPU lifecycle

## Setting CPU Frequency

This motherboard is CPU jumper-less design, you can set CPU frequency through the BIOS setup, and no jumpers or switches are needed.

## BIOS Setup > Frequency/Voltage Control > CPU Speed Setting

| CPU Ratio | $3 x, 3.5 x, 4 x, 4.5 x, 5 x, 5.5 x, 6 x, 6.5 x, 7 x, 7.5 x, 8 x, 8.5 x, 9 x, 9.5 x, 10 x, 10.5 x, 11 x$, <br> $11.5 x, 12 x, 12.5 x, 13 x, 13.5 x, 14 x, 14.5 x, 15 x, 15.5 x$ and $16 x$ |
| :--- | :--- |
| CPU FSB | $66.6,79,83.3,85,87.5,90,92.5,95,100,110,120,124,129,133.3,138,143,147$, |
| (By BIOS Table) | $152,154,157,159,162,166,171,180,190$, and 200 MHz |

Warning: VIA Apollo $133 T$ chipset supports maximum 133 MHz FSB and 66 MHz AGP clock, higher clock setting may cause serious system damage.

## Supported CPU Frequency

## Core Frequency = CPU Bus Clock * CPU Ratio PCI Clock = CPU Bus Clock / Clock Ratio AGP Clock =PCI Clock x 2

Note: This motherboard support CPU auto-detection function. Hence, you don't need to setup the CPU frequency manually.

| CPU | CPU Core Frequency | FSB Clock | Ratio |
| :---: | :---: | :---: | :---: |
| Celeron 533 | 533 MHz | 66 MHz | 8 x |
| Celeron 566 | 566 MHz | 66 MHz | 8.5 x |
| Celeron 600 | 600 MHz | 66 MHz | 9 x |
| Celeron 667 | 667 MHz | 66 MHz | 10x |
| Celeron 700 | 700 MHz | 66 MHz | 10.5 |
| Pentium III 500E | 500 MHz | 100 MHz | 5 x |
| Pentium III 600E | 600 MHz | 100 MHz | 6 x |
| Pentium III 650E | 650 MHz | 100 MHz | $6.5 x$ |
| Pentium III 700E | 700 MHz | 100 MHz | 7 x |
| Pentium III 750E | 750 MHz | 100 MHz | 7.5 |
| Pentium III 800E | 800 MHz | 100 MHz | 8 x |
| Pentium III 850E | 850 MHz | 100 MHz | 8.5x |
| Pentium III 533EB | 533 MHz | 133 MHz | 4 x |
| Pentium III 600EB | 600 MHz | 133 MHz | 4.5x |

| Pentium III 667EB | 667 MHz | 133 MHz | 5 x |
| :--- | :---: | :---: | :---: |
| Pentium III 733EB | 733 MHz | 133 MHz | 5.5 |
| Pentium III 800EB | 800 MHz | 133 MHz | 6 x |
| Pentium III 866EB | 866 MHz | 133 MHz | 6.5 |
| Pentium III 933EB | 933 MHz | 133 MHz | 7 x |
| Pentium III 1G | 1 GHz | 133 MHz | 7.5 x |
| Pentium III 1.13G | 1.13 GHz | 133 MHz | 8.5 x |

Warning: VIA Apollo Pro 133T chipset supports maximum 133 MHz FSB and 66MHz AGP clock, higher clock setting may cause serious system damage.

## CPU and Housing Fan Connector (with H/W Monitoring)

Plug in the CPU fan cable to the 3-pin CPU FAN connector. If you have housing fan, you can also plug it on System FAN connector and AUX FAN.

Note: Some CPU fans do not have sensor pin, so that cannot support fan monitorina.

FAN3
Connector

## DIMM Sockets

This motherboard has four 168-pin DIMM sockets that allow you to install PC100 or PC133 memory up to 2GB.

DIMM can be single side or double side; it has 64 bit data and 2 or 4 clock signals. We strongly recommend choosing 4-clock SDRAM for its reliability

SDRAM DIMM Module

ECC-Register DIMM Module

Note: Based on VIA Apollo Pro 133 Thipset specification, we recommend you that using double-side SDRAM modules with DIMM socket 1 \& 2. By the way, do not insert the single-side DIMM module in the DIMM socket 4 when DIMM socket 3 left blank. This will cause the size report error of DIMM.

## DXS4RTV

## How to Install Memory Modules

Please follow the procedure as shown below to finish memory installation.

1. Make sure the DIMM module's pin face down and match the socket's size as depicted below.

2. Insert the module straight down to the DIMM slot with both hands and press down firmly until the DIMM module is securely in place.

Note: The tabs of the DIMM slot will close-up to hold the DIMM in place when the DIMM touches the slot's bottom.
3. Repeat step 2 to finish additional DIMM modules installation.

## Front Panel Connector

Attach the power LED, speaker, power and reset switch connectors to the corresponding pins. If you enable "Suspend Mode" item in BIOS Setup, the ACPI \& Power LED will keep flashing while the system is in suspend mode.

Locate the power switch cable from your ATX housing. It is 2-pin female connector from the housing front panel. Plug this connector to the soft-power switch connector marked SPWR.

| Suspend Type | ACPI LED |
| :--- | :---: |
| Power on Suspend (S1) | Flashing for every second |
| Suspend to RAM (S3) or Suspend to Disk (S4) | The LED will be turned off |

| 1 |  |  |  |
| :---: | :---: | :---: | :---: |
| NC | O | 0 | SPWR |
| NC | O | 0 | GND |
| +5V | O | O | ACPILED- |
| IDE LED | O | O | GND |
| IDE LED | O | O | ACPILED |
| +5V | O | $\bigcirc$ | NC |
| +5V | O | O | NC |
| GND | O | $\bigcirc$ | GND |
| NC | O | 0 | RESET |
| SPEAKER | O | 0 | GND |

## ATX Power Connector

The ATX power supply uses 20-pin connector shown below. Make sure you plug in the right direction.

## AC Power Auto Recovery

A traditional ATX system should remain at power off stage when AC power resumes from power failure. This design is inconvenient for a network server or workstation, without an UPS, that needs to keep power-on. This motherboard implements an AC Power Auto Recovery function to solve this problem.

## Keyboard/Mouse Wake-up

This motherboard provides keyboard/mouse wake-up function. You can use the JP28 to enable or disable this function.

## IDE, Floppy, IDE RAID Connector

Connect 34-pin floppy cable and 40-pin, 80-wire IDE cable to floppy connector FDC and IDE / IDE RAID connector. Be careful of the pin1 orientation. Wrong orientation may cause system damage.

IDE RAID 1 (Primary) IDE RAID 2 (Secondary)

IDE1 is also known as the primary channel and IDE2 as the secondary channel. Each channel supports two IDE devices that make a total of four devices. In order to work together, the two devices on each channel must be set differently to Master and Slave mode. Either one can be the hard disk or the CDROM. The setting as master or slave mode depends on the jumper on your IDE device, so please refer to your hard disk and CDROM manual accordingly.
This motherboard supports ATA33, ATA66 or ATA100 IDE devices. Following table lists the transfer rate of IDE PIO and DMA modes. The IDE bus is 16 -bit, which means every transfer is two bytes.

| Mode | Clock Period | Clock <br> Count | Cycle Time | Data Transfer Rate |
| :--- | :--- | :--- | :--- | :--- |
| PIO mode 0 | 30 ns | 20 | 600 ns | $(1 / 600 \mathrm{~ns}) \times 2$ byte $=3.3 \mathrm{MB} / \mathrm{s}$ |
| PIO mode 1 | 30 ns | 13 | 383 ns | $(1 / 383 \mathrm{~ns}) \times 2$ byte $=5.2 \mathrm{MB} / \mathrm{s}$ |
| PIO mode 2 | 30 ns | 8 | 240 ns | $(1 / 240 \mathrm{~ns}) \times 2 \mathrm{byte}=8.3 \mathrm{MB} / \mathrm{s}$ |
| PIO mode 3 | 30 ns | 6 | 180 ns | $(1 / 180 \mathrm{~ns}) \times 2 \mathrm{byte}=11.1 \mathrm{MB} / \mathrm{s}$ |
| PIO mode 4 | 30 ns | 4 | 120 ns | $(1 / 120 \mathrm{~ns}) \times 2 \mathrm{byte}=16.6 \mathrm{MB} / \mathrm{s}$ |
| DMA mode 0 | 30 ns | 16 | 480 ns | $(1 / 480 \mathrm{~ns}) \times 2 \mathrm{byte}=4.16 \mathrm{MB} / \mathrm{s}$ |
| DMA mode 1 | 30 ns | 5 | 150 ns | $(1 / 150 \mathrm{~ns}) \times 2$ byte $=13.3 \mathrm{MB} / \mathrm{s}$ |
| DMA mode 2 | 30 ns | 4 | 120 ns | $(1 / 120 \mathrm{~ns}) \times 2$ byte $=16.6 \mathrm{MB} / \mathrm{s}$ |
| UDMA 33 | 30 ns | 4 | 120 ns | $(1 / 120 \mathrm{~ns}) \times 2 b y t e \times 2=33 \mathrm{MB} / \mathrm{s}$ |
| UDMA 66 | 30 ns | 2 | 60 ns | $(1 / 60 \mathrm{~ns}) \times 2$ byte $\times 2=66 \mathrm{MB} / \mathrm{s}$ |
| UDMA100 | 20 ns | 2 | 40 ns | $(1 / 40 \mathrm{~ns}) \times 2$ byte $\times 2=100 \mathrm{MB} / \mathrm{s}$ |

Warning: The specification of the IDE cable is a maximum of 46 cm (18 inches);

Tip:

1. For better signal quality, it is recommended to set the far end side device to master mode and follow the suggested sequence to install your new device. Please refer to above diagram
2. To achieve the best performance of Ultra DMA 66/100 hard disks, a special 80-wires IDE cable for Ultra DMA 66/100 is reauired.

## IrDA Connector

The IrDA connector can be configured to support wireless infrared module, with this module and application software such as Laplink or Windows 95 Direct Cable Connection, the user can transfer files to or from laptops, notebooks, PDA devices and printers. This connector supports HPSIR ( 115.2 Kbps , 2 meters) and ASK-IR ( 56 Kbps ).

Install the infrared module onto the IrDA connector and enable the infrared function from BIOS Setup, UART Mode, make sure to have the correct orientation when you plug in the IrDA connector.

## WOM (Zero Voltage Wake on Modem) Connector

This motherboard implements special circuit to support Wake On Modem, both Internal modem card and external box modem are supported. Since Internal modem card consumes no power when system power is off, it is recommended to use an internal modem. To use internal modem, connect 4-pin cable from RING connector of modem card to the WOM connector on the motherboard.

## DX34

## WOM by External BOX Modem

Traditional Green PC suspend mode does not really turn off the system power supply, it uses external box modem to trigger MB COM port and resume back to active.

## WOM by Internal Modem Card

With the help of the ATX soft power On/Off, it is possible to have a system totally power off, and wakeup to automatically answer a phone call as an answering machine or to send/receive a fax. You may identify whether or not your system is in true power off mode by checking to see if the fan of your power supply is off. Both an external box modem and an internal modem card can be used to support Modem Wake Up, but if you use an external modem, you have to leave your box modem on.

## WOL (Wake on LAN)

This feature is very similar as Wake On Modem, but it goes through local area network. To use Wake On LAN function, you must have a network card with chipset that supports this feature, and connect a cable from LAN card to motherboard WOL connector. The system identification information (probably IP address) is stored on network card and because there is a lot of traffic on the Ethernet, you need to install network management software, such as ADM, for the checking of how to wake up the system. Note that, at least 600 mA ATX standby current is required to support the LAN card for this function.

## AGP (Accelerated Graphic Port) Expansion Slot

The DX34R-U provides an AGP $4 x$ slot. The AGP $4 x$ is a bus interface targeted for high-performance 3D graphic. AGP supports only memory read/write operation and single-master single-slave one-to-one only. AGP uses both rising and falling edge of the 66 MHz clock, for 2 X AGP, the data transfer rate is $66 \mathrm{MHz} \times 4$ bytes $\times 2=528 \mathrm{MB} / \mathrm{s}$. AGP is now moving to AGP 4 x mode, 66 MHz $x 4$ bytes $\times 4=1056 \mathrm{MB} / \mathrm{s}$.

## Support 10/100 Mbps LAN onboard

VIA Apollo Pro 133T includes a fast Ethernet controller on chip. On the strength of LSI 80225 PHY on board, which is a highly-integrated Platform LAN Connect device, it provides 10/100M bps Ethernet for office and home use, the Ethernet RJ45 connector is located on top of USB connectors. The green LED indicates the link mode, it lights when linking to network and blinking when transferring data. The orange LED indicates the transfer mode, it lights when transferring data in 100Mbps mode.

Green/ACT

Yellow/Speed

## CNR (Communication and Network Riser) Expansion Slot

CNR is a riser card specification to replace the AMR (Audio/Modem Riser) that supports V. 90 analog modem, multi-channel audio, and phone-line based networking. Owing to CPU computing power getting stronger, the digital processing job can be implemented in main chipset and share CPU power. The analogy conversion (CODEC) circuit requires a different and separate circuit design, which is put on CNR card. This motherboard implements sound CODEC on board (can be disabled by JP12), but reserve CNR slot for the option of modem function. Note that you can still use PCl modem card.

## PC99 Color Coded Back Panel

The onboard I/O devices are PS/2 Keyboard, PS/2 Mouse, COM1, Printer, Four USB, AC97 sound and game ports. The view angle of drawing shown here is from the back panel of the housing.

PS/2 Keyboard: PS/2 Mouse:
USB Port:
Parallel Port:
COM1 Port:
Speaker Out:
Line-In:
MIC-In:
MIDI/Game Port:

For PC-Mouse, which is using a PS/2 plug.
Available for connecting USB devices.
To connect with SPP/ECP/EPP printer.
To connect with pointing devices, modem or others serial devices.
To External Speaker, Earphone or Amplifier.
Comes from the signal sources, such as CD/Tape player.
From Microphone.
For 15-pin PC joystick, game pad or MIDI devices.

## Support $2^{\text {nd }}$ USB Port

This motherboard provides $4 \underline{\text { USB }}$ connectors to connect USB devices, such as mouse, keyboard, modem, printer, etc. There are two connectors on the PC99 back panel. You can use proper cable to connect other USB connectors to the back panel or front panel of chassis.

## Chassis Intrusion Sensor

The "CASE OPEN" header provides chassis intrusion-monitoring function. This function logged the event in the system BIOS when chassis is opened. You can use the 2-pin chassis intrusion sensor to connect with this header, and enable the chassis monitoring function of system BIOS.

Chassis Intrusion
Sensor Connector

## JP12 Enable/Disable Onboard Sound

This motherboard has AC97 sound onboard. JP12 is used to enable or disable onboard AD1885 CODEC chip. If you don't want to enable the Onboard Audio, you should set this jumper to 2-3, and disable the "OnChip Sound" from BIOS setting > Advanced Chipset Features, before you install your preferred PCI Sound Card.

## CD Audio Connector

This connector is used to connect CD Audio cable from CDROM or DVD drive to onboard sound.

## Modem Audio Connector

This connector is used to connect Mono In/MIC Out cable from internal modem card to onboard sound circuit. The pin 1-2 is Mono In, and the pin 3-4 is MIC Out. Please note that there is no standard for this kind of connector yet, only some internal modem cards implement this connector.

## AUX-IN Connector

This connector is used to connect MPEG Audio cable from MPEG card to onboard sound.

AUX-IN Connector

## Front Audio Connector

If the housing has been designed with an audio port on the front panel, you'll be able to connect onboard audio to front panel through this connector. By the way, please remove the jumper cap from the Front Audio Connector if you want to connect cable to it. Do not remove this yellow jumper cap if there's no audio port on the front panel.

Note: Please remove the jumper cap from the Front Panel Audio Connector before you connect the cable. Do not remove this yellow jumper cap if housina without an audio port on the front panel.

## Dr. LED Connector

In conjunction with Dr. LED (Upgrade Optional), which can easily show what kind of problem may occur on your system during assembly. It can clearly indicate whether there is a component issue or an installation issue by the 8 LEDs on the front panel of Dr. LED. This helps you quickly self-diagnostic your system status.

Dr. LED is a CD disc storage box with 8 LEDs on its front panel, the size of Dr. LED is exactly the same as 5.25 in floppy drive, so that it can be mount into normal 5.25 in drive bay of any housing.

| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
| Boot O.K. | KB | HDD | Audio | PCI | Video | Memory | CPU |

The total 8 LEDs light up alternatively if the system fails in one of eight stages. Once the LED7 (latest LED) is lit, this indicates that the system has completed its boot-up procedure.
The 8 LEDs indicate the following messages when lit:
LED 0 - Indicates that the CPU may have been installed incorrectly or is damaged.
LED 1 - Indicates that the memory may have been installed incorrectly or is damaged.
LED 2 - Indicates that the AGP may have been installed incorrectly or is damaged.
LED 3 - Indicates that the PCI card may have been installed incorrectly or is damaged.
LED 4 - Indicates that the floppy disk drive may have been installed incorrectly or is damaged.
LED 5 - Indicates that the HDD may have been installed incorrectly or is damaged.
LED 6 - Indicates that the keyboard may have been installed incorrectly or is damaged.
LED 7 - Indicates that the system is OK.

Note: During POST (Power On Self Test) procedure, the Debug LED will light on sequentially from LEDO to LED7 until the system boot O.K

## Battery-less and Long Life Design

This Motherboard implements Flash ROM and a special circuit that allows you to save your current CPU and CMOS Setup configurations without the need of a battery. The RTC (real time clock) can also keep running as long as the power cord is plugged. If you lose your CMOS data by accident, you can just reload the CMOS configurations from Flash ROM and the system will recover as usual.

## Over-current Protection

The Over Current Protection was very popular implemented on ATX $3.3 \mathrm{~V} / 5 \mathrm{~V} / 12 \mathrm{~V}$ switching power supply. However, the new generation CPU uses different voltage that has regulator to transfer 5 V to CPU voltage (for example, 2.0 V ), and makes 5 V over current protection useless. This motherboard is with switching regulator onboard supports CPU over-current protection; in conjunction with $3.3 \mathrm{~V} / 5 \mathrm{~V} / 12 \mathrm{~V}$ power supply provide the full line over-current protection.

Note: Although we have implemented protection circuit try to prevent any human operating mistake, there is still certain risk that CPU, memory, HDD, add-on cards installed on this motherboard may be damaged because of component failure, human operating error or unknown nature reason. AOpen cannot guaranty the protection circuit will always work perfectly.

## Hardware Monitoring

This motherboard implements a hardware monitoring system. As you turn on your system, this smart design will continue to monitor your system's working voltage, fan status and CPU temperature. If any of these systems' status go wrong, there will be an alarm through the chassis external speaker or buzzer of motherboard (if existed) to warn the user.

## Resettable Fuse

Traditional motherboard has fuse for Keyboard and USB port to prevent over-current or shortage. These fuses are soldered onboard that when it is broken (function as protecting the motherboard), user still cannot replace it and the motherboard is still malfunctioning.

With expensive Resettable Fuse, the motherboard can be resumed back to normal function after the fuse had done its protection iob.

## $2200 \mu f$ Low ESR Capacitor

The quality of low ESR capacitor (Low Equivalent Series Resistance) during high frequency operation is very important for the stability of CPU power. The idea of where to put these capacitors is another know-how that requires experience and detail calculation.

Not only that, this motherboard implements $2200 \mu$ F condensers, which is much larger than normal condenser (1000 and 1500 $\mu f$ ) and it provides better stability for CPU power.

The power circuit of the CPU core voltage must be checked to ensure system stability for high speed CPUs (such as the new Pentium III, or when overclocking). A typical CPU core voltage is 2.0 V , so a good design should control voltage between 1.860 V and 2.140 V . That is, the transient must be below 280 mV . Below is a timing diagram captured by a Digital Storage Scope, it shows the voltage transient is only 143 mv even when maximum 18 A current is applied.

Note: This diagram for example only, it may not be exactly the same as this motherboard.

## Layout (Frequency Isolation Wall)

For high frequency operation, especially overclocking layout is the most important factor to make sure chipset and CPU working in stable condition. The layout of this motherboard implements AOpen's unique design called " Frequency Isolation Wall". Separating each critical portion of motherboard into regions where each region operates in a same or similar frequency range to avoid cross talk and frequency interference between each region's operations and condition. The trace length and route must be calculated carefully. For example, the clock trace must be equal length (not necessarily as short as possible) so that clock skew will be controlled within few a pico second ( $1 / 10^{12} \mathrm{Sec}$ )

Note: This diagram for example only, it may not be exactly the same as this motherboard.

## Pure Aluminum Heatsink

Cool down CPU and Chipset is important for system reliability. Aluminum heat sink provides better heat consumption especially when you are trying to overclocking.

## Driver and Utility

There are motherboard drivers and utilities included in AOpen Bonus CD disc. You don't need to install all of them in order to boot your system. But after you finish the hardware installation, you have to install your operation system first (such as Windows 98) before you can install any drivers or utilities. Please refer to your operation system's installation guide.

Note: Please follow recommended procedure to install Windows 95 and Windows 98.

## Auto-run Menu from Bonus CD Disc

You can use the auto-run menu of Bonus CD disc. Choose the utility and driver and select model name.

## Installing VIA 4 in 1 Driver

You can install the VIA 4 in 1 driver (IDE Bus master (For Windows NT use), VIA ATAPI Vendor Support Driver, VIA AGP, IRQ Routing Driver (For Windows 98 use), VIA Registry (INF) Driver) from the Bonus Pack CD disc Autorun menu.

(This page is intentionally left blank for notes)

## Installing Onboard Sound Driver

This motherboard comes with an AD1885 AC97 CODEC. You can find the audio driver from the Bonus Pack CD disc auto-run menu.

## Installing LAN Driver

The South Bridge in VIA Apollo 133T chipset integrates a total communication solution including 10/100Mb Fast Ethernet for Office requirement. You can install LAN Driver under Windows95/98/ME, WindowsNT4 \& Windows2000 by following steps. Manually Adding an Adapter in Windows 95 / 98 / ME / NT4 / 2000:

## LOCATION OF DRIVER: \Driver\LAN\RTL8100\Windows

## (Depend on various Windows version in your system.)

1. From the Control Panel, double-click the "Add Hardware" icon.
2. Double-click Other Devices or Network Adapters in the list area.
3. Double-click a PCI Ethernet Controller.
4. Click the Driver tab, then click Update Driver.
5. Click Next at the Update Device Driver Wizard.
6. Select "Display a list of all the drivers..." and click Next.
7. Insert the AOpen Bonus CD and click Have Disk.
8. Enter the appropriate drive for your disk media (for example: D:I) ,and click OK.
9. Click OK at the Select Device dialog box.
10. The Update Wizard displays the message that it has found the driver. Click Next.
11. Click Finish and restart your computer when prompted.

## Install Onboard IDE RAID Driver

The onboard PROMISE ${ }^{\oplus}$ FastTrak 100 Lite chipset provides DOS, Widows 3.1/95/98/98 SE/ME/NT/2000 driver for install. Please refer to the "ATA/100 IDE RAID Manual" for get more detail information.

## Install FastCheck ${ }^{\text {TM }}$ Monitoring Utility

You can monitor the operating status of disk array and drives configured on the IDE RAID channel using the supplies FastCheck ${ }^{\text {TM }}$ monitoring utility for Windows-based operating system. FastCheck ${ }^{\text {TM }}$ generates visual and audible messages alerting you of possible problems with the disk array or controller. Please refer to the "ATA/100 IDE RAID Manual" for get more detail information.

## ACPI Suspend to Hard Drive

ACPI Suspend to Hard Drive is basically controlled by Windows operation system. It saves your current work (system status, memory and screen image) into hard disk, and then the system can be totally power off. Next time, when power is on, you can resume your original work directly from hard disk within few seconds without go through the Windows booting process and run your application again. If your memory is 64MB, normally, you need to reserve at least 64MB HDD space to save your memory image.

## When go into Suspend:

When power-on next time:

## System Requirement

1. AOZVHDD.EXE 1.30b or later.
2. Delete config.sys and autoexec.bat.

## Fresh installation of Windows 98 on a new system

1. Execute "Setup.exe /p j" to install Windows 98
2. After Windows 98 's installation is complete, go to the Control Panel > Power Management.
a. Set Power Schemes > System Standby to "Never".
b. Click on "Hibernate" and select "Enable Hibernate Support" then "Apply".
c. Click on the "Advanced" tab, you'll see "Hibernate" on "Power Buttons". Note that this option will only be seen after step b mentioned above has been completed; otherwise only "Standby" and "Shutdown" will be shown. Select "Hibernate" and "Apply".
3. Clean boot into DOS and run AOZVHDD utility.
a. If you assign the whole disk to your Win 98 system (FAT 16 or FAT 32), please run "aozvhdd /c /file". Please remember sufficient free space has to be reserved in the disk, e.g. if you have 64 MB DRAM and 16 MB VGA card installed, the system needs at least 80 MB free space. The utility will locate the space automatically.
b. If you assign an individual partition for Win 98, please run "aozvhdd /c /partition". Of course, the system needs to provide unformatted an empty partition.
4. Reboot system.
5. You've already implemented ACPI Suspend to-Hard Drive. Click "Start > Shut Down > Standby" then the screen will go off immediately. And 1 minute or so will be taken for the system to save what's in the memory to the hard drive; the larger the memory size the longer this process will take.

## Changing from APM to ACPI (Windows 98 only)

1. Run "Regedit.exe"
a. Go through the following path

HKEY_LOCAL_MACHINE
SOFTWARE
MICROSOFT
WINDOWS
CURRENT VERSION
DETECT
b. Select "ADD Binary" and name it as "ACPIOPTION".
c. Right click and select Modify, add "01" after "0000" to make it "0000 01".
d. Save changes.
2. Select "Add New Hardware" under Control Panel. Allow Windows 98 to detect new hardware. (It will find "ACPI BIOS" and remove "Plug and Play BIOS")
3. Reboot system.
4. Clean boot into DOS and run "AOZVHDD.EXE /C /File"

## Changing from ACPI to APM

1. Run "Regedit.exe"
a. Go through the following path

## HKEY_LOCAL_MACHINE

SOFTWARE
MICROSOFT
WINDOWS

## CURRENT VERSION

DETECT
ACPI OPTION
b. Right click and select "Modify, change " 01 " to " 02 " to make it "0000 02".

Tip: "02" means Windows 98 is ACPI acknowledged but the ACPI function is disabled.
c. Save changes.
2. Select "Add New Hardware" under Control Panel. Allow Windows 98 to detect new hardware. (It will find "Plug and Play BIOS" and remove "ACPI BIOS")
3. Reboot system.
4. Run "Add New Hardware" again and it will find "Advanced Power Management Resource".
5. Click "OK".

Tip: Currently we found only ATI 3D Rage Pro AGP card would support ACPI suspend to disk. Please refer to AOpen web site for latest update.

## ACPI Suspend to RAM (STR)

This motherboard supports ACPI Suspend to RAM function. With this function, you can resume your original work directly from DRAM without going through the Windows 98 booting process and run your application again. Suspend to DRAM saves your current work in the system memory, it is faster than Suspend to Hard Drive but requires power supplied to DRAM, while Suspend to Hard Drive requires no power.

## When go into Suspend:

## When power-on next time:

To implement ACPI Suspend to DRAM, please follow the procedures as below:

## System Requirement

1. An ACPI OS is required. Currently, Windows 98 is the only choice.
2. The VIA 4 in 1 Driver must have been installed properly.

## Procedures

1. Changed the following BIOS settings.

BIOS Setup > Power Management Setup > ACPI Function: Enabled

BIOS Setup > Power Management Setup > ACPI Suspend Type: S3.
2. Go to Control Panel > Power Management. Set "Power Buttons" to "Standby".
3. Press power button or standby button to wake up the system.

## AWARD BIOS

System parameters can be modified by going into BIOS Setup menu, this menu allows you to configure the system parameters and save the configuration into the 128 bytes CMOS area, (normally in the RTC chip or in the main chipset).

The AwardBIOS ${ }^{\top M}$ that installed in the Flash ROM of the motherboard is a custom version of an industry standard BIOS. The BIOS provides critical low-level support for standard devices such as hard disk drives, serial and parallel ports.

Most BIOS setting of DX34R-U motherboard had optimized by AOpen's R\&D engineering team. But, the default setting of BIOS still can't fine-tune the chipset controlling entire system. Hence, the rest of this chapter is intended to guide you through the process of configuring your system using setup.

To enter to BIOS setup menu, press <Del> when POST (Power-On Self Test) screen is shown on your monitor.

Note: Because the BIOS code is the most often changed part of the motherboard design, the BIOS information contained in this manual may be different with actual BIOS that come with your motherboard.

## About BIOS Function Description...

AOpen always dedicates to give users a more friendly computer system. Now, we include all function descriptions of BIOS setup program into the BIOS Flash ROM. When you select one function of BIOS setup program, the function description will appeared at right side of screen. Hence, you don't need read this manual while you changing the BIOS setting.

## How To Use Award ${ }^{T M}$ BIOS Setup Program

Generally, you can use the arrow keys to highlight items that you want to choose, then press <Enter> key to select, and use the <Page Up> and <Page Down> key to change setting value. You also can press <F1> key for help and press <Esc> key to quit Award ${ }^{T M}$ BIOS setup program. The following table provides details about how to use keyboard in the Award ${ }^{T M}$ BIOS setup program. By the way, all products of AOpen also provides a special function in the BIOS setup, you can press <F3> key selecting preferred menu language to display.

| Key | Description |
| :--- | :--- |
| Page Up or + | Changing setting to next value or increase the value. |
| Page Down or - | Changing setting to previous value or decrease value. |
| Enter | Select the item. |
| Esc | $1 . \quad$ In main menu: Quit and don't save any change. <br> 2. In sub menu: Exit current menu to main menu. |
| Up Arrow | Highlight previous item. |
| Down Arrow | Highlight next item. |
| Left Arrow | Move the light bar to left side of menu. |
| Right Arrow | Move the light bar to right side of menu. |
| F1 | Get menu or item help description. |
| F3 | Changing menu language. |
| F5 | Load previous setting value from CMOS. |

| Key | Description |
| :--- | :--- |
| F6 | Load fail-save setting value from CMOS. |
| F7 | Load turbo setting value from CMOS. |
| F10 | Save changed setting and exit setup program. |

Note: AOpen always dedicates to give users a more friendly computer system. Now, we include all function descriptions of BIOS setup program into the BIOS Flash ROM. When you select one function of BIOS setup program, the function description will appeared at right side of screen. Hence, you don't need read this manual while you changing the BIOS setting.

## How To Enter BIOS Setup

After you finish the setting of jumpers and connect correct cables. Power on and enter the BIOS Setup, press <Del> during_ POST (Power-On Self Test). Choose "Load Setup Defaults" for recommended optimal performance.

## BIOS Upgrade

By flashing your motherboard, you agree to accept the possibility of BIOS flash failure. If you motherboard is working and is stable, and there are no major bugs that were fixed by a latter BIOS revision, we recommend that you DO NOT try to upgrade your BIOS.
By doing so, you are taking a risk of BIOS flash failure. If you indeed intent on upgrading, PLEASE BE SURE to use the right BIOS revision for the right motherboard model.

AOpen Easy Flash is a little different than traditional flash method. The BIOS binary file and flash routine are linked together and you simply run a single commend to complete the flash process.

Caution: AOpen Easy Flash BIOS programs are designed to be compatible with the Award BIOS. At the date of this note, AOpen Easy Flash BIOS programs are not available for AMI BIOS. AMI BIOS appears mostly only on old 486 boards and some early Pentium boards. Please be sure to view the README compressed inside the BIOS package before upgrading, and follow upgrade instructions carefully. This will minimize the chance of flash failures.

Below are the steps for easy flashing procedures: (applies for Award BIOS ONLY)

1. Download new BIOS upgrade zip file from AOpen's web site. For example, DX34RU2U102.ZIP.
2. Run shareware PKUNZIP (http://www.pkware.com/) which supports miscellaneous operation systems to extract the binary BIOS file and the flash utility. Or Winzip (http://www.winzip.com/) in Windows environment.
3. Save the unzipped file into a bootable floppy disk.

For example, DX34RU2U102.BIN \& DX34RU102.EXE
4. Reboot the system to DOS mode without loading any memory handler (such as EMM386) or device driver. It needs around 520 K free memory spaces.
5. Execute A:> DX34RU102 and the program will do the rest of it.

## DO NOT turn off the power during FLASH PROCESS until you are asked to!!

6. Reboot system and press <Del> to enter BIOS setup, Choose "Load Setup Defaults", then "Save \& Exit Setup". Done!

Warning: The new BIOS upgrade will permanently replace your original BIOS's settings and PnP information when flashing. You may need to reconfigure your BIOS setting and re-install Win95/Win98 as well as your add-on cards, so that your system can go back to work as normal.

## Overclocking

As a leading manufacturer in motherboard industry, AOpen always listens to what customers want and develop products to fit different user's requirements. Reliability, compatibility, leading technology and friendly features are our basic goals when designing motherboards. Other than above mentioned design criteria, there are power users who are always seeking to push the limitation of the system performance by overclocking which we call them "Overclocker".

This section is dedicated to overclockers.
This high performance motherboard is designed for maximum 133 MHz CPU bus clock. But it comes with clock generator of $\mathbf{2 0 0 M H z}$ when we design it to accommodate future CPU bus clock. Our lab test results shown that $\mathbf{1 6 6 M H z}$ is achievable when proper setting and qualified components were presented, we feel quite comfortable overclocking to $\mathbf{1 6 6 M H z}$. Not only that, this motherboard has full-range (CPU core voltage) settings and an option to adjust CPU core voltage. The CPU clock ratio can be up to $8 x$ that supports almost all of Pentium III/Celeron CPUs in the future and provides flexibility for overclockers. For your reference, the following configurations are what we feel comfortable at $\mathbf{1 6 6 M H z}$ bus clock.

But not guaranty.

Tip: Note that overclocking may also cause thermal problem. Please make sure that the cooling fan and the heatsink were adequate to dissipate excessive heat that's generated by overclocking the CPU.

Warning: The design of this product follows CPU and chipset vendor's design guideline. Any attempts to push beyond product specification are not recommended and you are taking your own risk to damage your system or important data. Before doing overclocking, you must make sure your components are able to tolerate such abnormal setting, especially CPU, DRAMs, hard disks, and AGP VGA cards.

## VGA Card \& Hard Disk

VGA and HDD is key components for overclocking, for your reference, the following list are what have been successful overclocked in our lab. Please note that AOpen can not guaranty they can be successful overclocked again. Please check the Available Vendor List (AVL) by link to our official website.

VGA: http://www.aopen.com.tw/tech/report/overclk/mb/vga-oc.htm
HDD: http://www.aopen.com.tw/tech/report/overclk/mb/hdd-oc.htm

## Glossary

## AC97

Basically, AC97 specification separates sound/modem circuit to two parts, digital processor and a CODEC for analogy I/O they are linked by AC97 link bus. Since digital processor can be put into motherboard main chipset, the cost of sound/modem onboard solution can be reduced.

## ACPI (Advanced Configuration \& Power Interface)

ACPI is the power management specification of PC97 (1997). It intends to save more power by taking full control of power management to operating system and bypass BIOS. The chipset or super I/O chip needs to provide standard register interface to operating system (such as Windows 98). This is a bit similar as the PnP register interface. ACPI defines ATX momentary soft power switch to control the power state transition.

## AGP (Accelerated Graphic Port)

AGP is a bus interface targeted for high-performance 3D graphic. AGP supports only memory read/write operation and single-master single-slave one-to-one only. AGP uses both rising and falling edge of the 66 MHz clock, for 2 X AGP, the data transfer rate is $66 \mathrm{MHz} \times 4$ byte $\times 2=528 \mathrm{MB} / \mathrm{s}$. AGP is now moving to 4 X mode, $66 \mathrm{MHz} \times 4$ byte $\times 4=1056 \mathrm{MB} / \mathrm{s}$. AOpen is the first company to support 4X AGP motherboards by both AX6C (Intel 820) and MX64/AX64 (VIA 694x), started from Oct 1999.

## AMR (Audio/Modem Riser)

The CODEC circuit of AC97 sound/modem solution can be put on motherboard or put on a riser card (AMR card) that connects to motherboard through AMR connector.

## AOpen Bonus Pack CD

A disc bundled with AOpen motherboard product; there are motherboard drivers, Acrobat Reader for PDF online manual and other useful utilities.

## APM (Advanced Power Management)

Unlike ACPI, BIOS controls most APM power management functions. AOpen Suspend to Hard Drive is a good example of APM power management.

## ATA (AT Attachment)

ATA is the specification of diskette interface. In 80 's, many software and hardware manufacturers instituted the ATA specification together. The AT is meaning International Business Machines Corporation (IBM) personal computer/AT's bus structure.

## ATA/66

ATA/66 uses both rising edge and falling edge but doubles UDMA/33 transfer rate. The data transfer rate is 4 times of the PIO mode 4 or DMA mode $2,16.6 \mathrm{MB} / \mathrm{s} \times 4=66 \mathrm{MB} / \mathrm{s}$. To use ATA/66, you need special ATA/66 IDE cable.

## ATA/100

ATA/100 is a new IDE specification under developing. ATA/100 uses both rising edge and falling edge as ATA/66 but clock cycle time is reduced to 40 ns . The data transfer rate is ( $1 / 40 \mathrm{~ns}$ ) $\times 2$ bytes $\times 2=100 \mathrm{MB} / \mathrm{s}$. To use ATA/100, you need special 80 -wire IDE cable, the same as ATA/66.

## BIOS (Basic Input/Output System)

BIOS is a set of assembly routine/program that reside in EPROM or Flash ROM. BIOS controls Input/output devices and other hardware devices of motherboard. In general, to provide hardware independent portability, operation system and drivers is required to access BIOS without directly access hardware devices.

## Bus Master IDE (DMA mode)

The traditional PIO (Programmable I/O) IDE requires the CPU to involve in all the activities of the IDE access including waiting for the mechanical events. To reduce the workload of the CPU, the bus master IDE device transfers data from/to memory without interrupting CPU, and releases CPU to operate concurrently while data is transferring between memory and IDE device. You need the bus master IDE driver and the bus master IDE HDD to support bus master IDE mode.

## CNR (Communication and Networking Riser)

The CNR specification provides the PC industry the opportunity to deliver a flexible and cost reduced method of implementing LAN, home networking, DSL, USB, wireless, audio and modem subsystems widely used in today's "connected PCs". The CNR specification is an open industry specification and is supported by OEMs, IHV card manufacturers, silicon supplier and Microsoft.

## CODEC (Coding and Decoding)

Normally, CODEC means a circuit that can do digital to analog conversion and also the analog to digital conversion. It is part of AC97 sound/modem solution.

## DDR (Double Data Rated) SDRAM

DDR SDRAM utilizes the existing DRAM infrastructure and technology while doubling the nominal bandwidth available to systems in an easy to design and simple to adopt way. Initially a perfect solution for memory intensive server and workstation applications, DDR low cost and low voltage will ultimately make it an ideal solution for all segments of the PC market, high performance desktop and mobile PCs, Value PCs and even Internet Appliances and mobile devices.

## DIMM (Dual In Line Memory Module)

DIMM socket has total 168-pin and supports 64-bit data. It can be single or double side, the golden finger signals on each side of PCB are different, and that is why it was called Dual In Line. Almost all DIMMs are made by SDRAM, which operate at 3.3 V . Note that some old DIMMs are made by FPM/EDO and only operate at 5 V . Do not confuse them with SDRAM DIMM.

## DMA (Direct Memory Access)

Channel for communications between the memory and surrounding devices.

## ECC (Error Checking and Correction)

The ECC mode needs 8 ECC bits for 64 -bit data. Each time memory is accessed; ECC bits are updated and checked by a special algorithm. The ECC algorithm has the ability to detect double-bit error and automatically correct single-bit error while parity mode can only detect single-bit error.

## EDO (Extended Data Output) Memory

The EDO DRAM technology is actually very similar to FPM (Fast Page Mode). Unlike traditional FPM that tri-states the memory output data to start the pre-charge activity, EDO DRAM holds the memory data valid until the next memory access cycle, that is similar to pipeline effect and reduces one clock state.

## EEPROM (Electronic Erasable Programmable ROM)

Also known as $E^{2}$ PROM. Both EEPROM and Flash ROM can be re-programmed by electronic signals, but the interface technology is different. Size of EEPROM is much smaller than flash ROM.

## EPROM (Erasable Programmable ROM)

Traditional motherboard stores BIOS code in EPROM. EPROM can only be erased by ultra-violet (UV) light. If BIOS has to be upgraded, you need to remove EPROM from motherboard, clear by UV light, re-program, and then insert back.

## EV6 Bus

EV6 Bus in the technology of Alpha processor from Digital Equipment Corporation. EV6 bus uses both rising and falling clock edge to transfer data, similar as DDR SDRAM or ATA/66 IDE bus.
EV6 Bus Speed = CPU external bus clock x 2 .
For example, 200 MHz EV6 bus is actually using 100 MHz external bus clock, but the equivalent speed is 200 MHz .

## FCC DoC (Declaration of Conformity)

The DoC is component certification standard of FCC EMI regulations. This standard allows DIY component (such as motherboard) to apply DoC label separately without a shielding of housing.

## FC-PGA (Flip Chip-Pin Grid Array)

FC means Flip Chip, FC-PGA is a new package of Intel for Pentium III CPU. It can plug into SKT370 socket, but require motherboard to add some signals on socket 370 . That is, the motherboard needs to be redesigned. Intel is going to ship FC-PGA 370 CPU and phase out slot1 CPU.

## Flash ROM

Flash ROM can be re-programmed by electronic signals. It is easier for BIOS to upgrade by a flash utility, but it is also easier to be infected by virus. Because of increase of new functions, BIOS size is increased from 64 KB to 256 KB ( 2 M bit). AOpen AX5T is the first board to implement 256KB (2Mbit) Flash ROM. Now flash ROM size is moving to 4M bit on AX6C (Intel 820) and MX3W (Intel 810) motherboard. , AOpen motherboard uses EEPROM for jumper-less and battery-less design.

## FSB (Front Side Bus) Clock

FSB Clock means CPU external bus clock.
CPU internal clock $=$ CPU FSB Clock x CPU Clock Ratio

## $I^{2} C$ Bus

See SMBus.

## IEEE 1394

IEEE 1394 is a low-cost digital interface originated by Apple Computer as a desktop LAN and developed by the IEEE 1394 working group. The IEEE 1394 can transport data at 100,200 or 400 Mbps . One of the solutions to connect digital television devices together at 200 Mbps . Serial Bus Management provides overall configuration control of the serial bus in the form of optimizing arbitration timing, guarantee of adequate electrical power for all devices on the bus, assignment of isochronous channel ID, and notification of errors. There are two type of IEEE 1394 data transfer: asynchronous and isochronous. Asynchronous transport is the traditional computer memory-mapped, load and store interface. Data requests are sent to a specific address and an acknowledgment is returned. In addition to an architecture that scales with silicon technology, IEEE 1394 features a unique isochronous data channel interface. Isochronous data channels provide guaranteed data transport at a pre-determined rate. This is especially important for time-critical multimedia data where just-in-time delivery eliminates the need for costly buffering.

## Parity Bit

The parity mode uses 1 parity bit for each byte, normally it is even parity mode, that is, each time the memory data is updated, parity bit will be adjusted to have even count " 1 " for each byte. When next time, if memory is read with odd number of " 1 ", the parity error is occurred and this is called single bit error detection.

## PBSRAM (Pipelined Burst SRAM)

For Socket 7 CPU, one burst data read requires four QWord (Quad-word, $4 \times 16=64$ bits). PBSRAM only needs one address decoding time and automatically sends the remaining QWords to CPU according to a predefined sequence. Normally, it is 3-1-1-1, total 6 clocks, which is faster than asynchronous SRAM. PBSRAM is often used on L2 (level 2) cache of Socket 7 CPU. Slot 1 and Socket 370 CPU do not need PBSRAM.

## PC-100 DIMM

SDRAM DIMM that supports 100 MHz CPU FSB bus clock.

## PC-133 DIMM

## SDRAM DIMM that supports 133 MHz CPU FSB bus clock.

## PC-1600 or PC-2100 DDR DRAM

Based on FSB frequency, the DDR DRAM has 200 MHz and 266 MHz two type of working frequency. Because of DDR DRAM data bus is 64 -bit, it provides data transfer bandwidth up to $200 \times 64 / 8=1600 \mathrm{MB} / \mathrm{s}$, and $266 \times 64 / 8=2100 \mathrm{MB} / \mathrm{s}$. Hence, the $\mathrm{PC}-1600$ DDR DRAM is working with 100 MHz and PC-2100 DDR DRAM is working with 133 MHz FSB frequency.

## PCI (Peripheral Component Interface) Bus

Bus for the internal connection of peripheral devices, high-speed data channel between the computer and expansion card.

## PDF Format

A file format for electronic document, PDF format is independent from platform, you can read PDF file under Windows, Unix, Linux, Mac ... with different PDF reader. You can also read PDF file by web browser such as IE and Netscape, note that you need to install PDF plug-in first (Included in Acrobat Reader).

## PnP (Plug and Play)

The PnP specification suggests a standard register interface for both BIOS and operating system (such as Windows 95). These registers are used by BIOS and operating system to configure system resource and prevent any conflicts. PnP BIOS or operating system will automatically allocate the IRQ/DMA/Memory. Currently, almost all the PCI cards and most ISA cards are already PnP compliant.

## POST (Power-On Self Test)

The BIOS self-test procedure after power-on, sometimes, it is the first or the second screen shown on your monitor during system boot.

## RDRAM (Rambus DRAM)

Rambus is a memory technology that uses large burst mode data transfer. Theoretically, the data transfer should be high than SDRAM. RDRAM is cascaded in channel operation. For Intel 820, only one RDRAM channel is supported, 16-bit data per channel, and this channel may have maximum 32 RDRAM devices, no matter how many RIMM sockets.

## RIMM (Rambus Inline Memory Module)

184-pin memory module that supports RDRAM memory technology. A RIMM memory module may contain up to maximum of 16 RDRAM devices.

## SDRAM (Synchronous DRAM)

SDRAM is one of the DRAM technologies that allow DRAM to use the same clock as the CPU host bus (EDO and FPM are asynchronous and do not have clock signal). It is similar as PBSRAM to use burst mode transfer. SDRAM comes in 64-bit 168-pin DIMM and operates at 3.3V. AOpen is the first company to support dual-SDRAM DIMMs onboard (AP5V), from Q1 1996

## Shadow $E^{2} P R O M$

A memory space in Flash-ROM to simulate $E^{2}$ PROM operation, AOpen motherboard uses Shadow $E^{2}$ PROM for jumper-less and battery-less design

## SIMM (Single In Line Memory Module)

SIMM socket is only 72-pin, and is only single side. The golden finger signals on each side of PCB are identical. That is why it was called Single In Line. SIMM is made by FPM or EDO DRAM and supports 32-bit data. SIMM had been phased out on current motherboard design.

## SMBus (System Management Bus)

SMBus is also called I2C bus. It is a two-wire bus developed for component communication (especially for semiconductor IC). For example, set clock of clock generator for jumper-less motherboard. The data transfer rate of SMBus is only 100Kbit/s, it allows one host to communicate with CPU and many masters and slaves to send/receive message.

## SPD (Serial Presence Detect)

SPD is a small ROM or EEPROM device resided on the DIMM or RIMM. SPD stores memory module information such as DRAM timing and chip parameters. SPD can be used by BIOS to decide best timing for this DIMM or RIMM.

## Ultra DMA

Ultra DMA (or, more accurately, Ultra DMA/33) is a protocol for transferring data between a hard disk drive through the computer's data path (or bus) to the computer's random access memory (RAM). The Ultra DMA/33 protocol transfers data in burst mode at a rate of $33.3 \mathrm{MB} / \mathrm{s}$, twice as fast as the previous Direct Access Memory (DMA) interface. Ultra DMA was developed as a proposed industry standard by the Quantum corporation, makes of hard disk drives, and Intel, makes of chipset that support computer bus technology. Ultra DMA support in your computer means that it will boot (start) and open new applications more quickly. It will help users of graphic-intensive and applications that require large amounts of access to data on the hard disk drive. Ultra DMA uses Cyclical Redundancy Checking (CRC), offering a new level of data protection. Ultra DMA uses the same 40-pin IDE interface cable as PIO and DMA.

```
16.6MB/s x2 = 33MB/s
16.6MB/s x4 = 66MB/s
16.6MB/s x6 = 100MB/s
```

## USB (Universal Serial Bus)

USB is a 4-pin serial peripheral bus that is capable of cascading low/medium speed peripherals (less than 10Mbit/s) such as keyboard, mouse, joystick, scanner, printer and modem. With USB, the traditional complex cables from back panel of your PC can be eliminated.

## VCM (Virtual Channel Memory)

NEC's Virtual Channel Memory (VCM) is a new DRAM core architecture that dramatically improves the memory system's ability to service multimedia requirements. VCM increases memory bus efficiency and performance of any DRAM technology by providing a set of fast static registers between the memory core and I/O pins. Using VCM technology results in reduced data access latency and reduced power consumption.

## ZIP file

A compressed file format to reduce file size. To unzip file, run shareware PKUNZIP (http://www.pkware.com/) for DOS and other operating system or WINZIP (http://www.winzip.com/) for windows environment.

## 2. Troubleshooting

If you encounter any trouble to boot you system, follow the procedures accordingly to resolve the problem.

Press <Ctrl> and <Alt> key at the same time, hold them and then press <Del> to reboot the system.

## Lesems

## $\Psi_{\text {Technical Support }}$

Dear Customer,
Thanks for choosing AOpen products. To provide the best and fastest service to our customer is our first priority. However, we receive numerous emails and phone-calls worldwide everyday, it is very hard for us to serve everyone on time. We recommend you follow the procedures below and seek help before contact us. With your help, we can then continue to provide the best quality service to more customers.

Thanks very much for your understanding!
AOpen Technical Supporting Team
Online Manual: Please check the manual carefully and make sure the jumper settings and installation procedure are correct.
http://www.aopen.com.tw/tech/download/manual/default.htm

Test Report: We recommend choosing board/card/device from the compatibility test reports for assembling your PC. http://www.aopen.com.tw/tech/report/default.htm

FAQ: The latest FAQ (Frequently Asked Questions) may contain a solution to your problem.
http://www.aopen.com.tw/tech/fag/default.htm

Download Software: Check out this table to get the latest updated BIOS/utility and drivers.
http://www.aopen.com.tw/tech/download/default.htm

News Group: Your problem probably had been answered by our support engineer or professional users on the news group.
http://www.aopen.com.tw/tech/newsgrp/default.htm
Contact Distributors/Resellers: We sell our products through resellers and integrators. They should know your system configuration very well and should be able to solve your problem more efficiently than us. After all, their attitude of service is an important reference for you if next time you want to buy something else from them.

Contact Us: Please prepare detail system configuration and error symptom before contacting us. The part number, serial number and BIOS version are also very helpful.

## Part Number and Serial Number

The Part Number and Serial number are printed on bar code label. You can find this bar code label on the outside packing, on ISA/CPU slot or on component side of PCB. For example:

918811020191949378 KN 73
Part No
Serial No
P/N: 91.88110.201 is part number, $\mathbf{S} / \mathbf{N}$ : 91949378 KN73 is serial number.

## Model name and BIOS version

Model name and BIOS version can be found on upper left corner of first boot screen (POST screen). For example:

DX34R-U is model name of motherboard, R1.20 is BIOS version.

## Product Registration

Thank you for choosing AOpen product. AOpen encourages you to spend few minutes in completing the following product registration. To register your product will ensure the high quality of services from AOpen. After the registration, you will:

- Have opportunities to play online slot machine and win a prize from AOpen by accumulating your bonuses for later prize exchange.
- Be upgraded to gold membership of Club AOpen program.
- Receive email notification about product safety alerts. Its purpose is to alert consumers quickly and conveniently when products contain technical issues.
- Receive email notification about latest product's announcements.
- Be able to personalize your AOpen web pages.
- Receive e-mail notification about latest BIOS/Driver/Software release information.
- Have opportunities to participate special product promotional programs.
- Enjoy higher service priority to receive technical assistance provided by AOpen specialists worldwide.
- Be able to join the discussions of web-based news groups.

AOpen makes sure that the information you provide is encrypted, so that it cannot be read or intercepted by other people or companies. Further, AOpen will not disclose any of information you submitted under any conditions. Please consult our online privacy policy for further information on our company policy.

Note: If registering products purchased from different dealers/retails and/or purchased on different dates, please submit a separate form for each product.

Please do not hesitate contact us if you have any problem about our products．Any opinion will be appreciated．
