

Introduction

System Overview

The board incorporates system board, ISA I/O and PCI IDE in one board that provides all the PC solutions. The mainboard is a Pentium II™ micro processor based PC/AT system, supports single processors with ISA Bus , PCI Local Bus and AGP Bus to upgrade your system performance. It is ideal for multi-tasking and fully supports MS-DOS, Windows, Windows NT, Novell, OS/2, Windows95/98, UNIX, SCO UNIX etc. This manual also explains how to install the mainboard for operation, and how to setup your CMOS configuration with BIOS setup program.

Features

• Hardware

CPU

- The Pentium II™ micro Processor provides the new generation power for high-end workstations and servers.
- Provides slot1.

Speed

- Supports CPU bus frequency 66MHz and 100MHz.
- Supports from 233MHz to 450MHz CPU core speed.
- Supports 33MHz PCI Bus speed.
- I/O clock 8MHz for ISA Bus.
- Supports 66MHz / 133MHz AGP Bus.

DRAM Memory

- Supports 8/16/32/64.....MB DIMM module socket.
- Supports Synchronous DRAM (3.3V).
- Supports a maximum memory size of 384MB with SDRAM.

Green Function

- Supports power management operation via BIOS.
- Power down timer from 1 min to 15 mins.
- Wakes up by any key pressed or mouse activity.

Shadow RAM

- A memory controller that provides shadow RAM and supports 8-bit ROM BIOS.

BUS Slots

- Provides two 16-bit ISA Bus slots and three PCI Bus slots, one AGP Bus slot.

Flash Memory

- Supports flash memory.
- Supports ESCD Function.

PCI Enhanced IDE Built-in On Board

- Supports 4 IDE hard disk drives.
- Supports PIO mode 4, Master Mode, high performance hard disk drives.
- Supports Ultra DMA/33, Bus Master Mode.
- Supports IDE interface with CD-ROM.
- Supports high capacity hard disk drives.
- Supports LBA mode.
- Supports LS120/ZIP 100.

ISA I/O Built-in On Board

- Supports one multi-mode Parallel Port.
 - (1) Standard & Bidirection Parallel Port.
 - (2) Enhanced Parallel Port (EPP).
 - (3) Extended Capabilities Port (ECP).
- Supports two serial ports, 16550 UART.
- Supports one Infrared transmission (IR). (optional)
- Supports PS/2 Mouse.
- Supports 360KB, 720KB, 1.2MB, 1.44MB and 2.88MB floppy disk drivers.

Universal Serial Bus

- Supports two Universal Serial Bus (U.S.B.) Ports.
- Supports 48 MHz USB.

Dimension(ATX form-factor)

- 26.5 cm X 19.3 cm (W x L)

• Software**BIOS**

- AWARD legal BIOS.
- Supports APM1.2.
- Supports USB Function.

O.S.

- Offers the highest performance for MS-DOS, OS/2, Windows, Windows NT, Windows 95/98, Novell, UNIX, SCO UNIX etc.

• Attachments

- HDD Cable
- FDD Cable
- Flash Memory Writer for BIOS Update (optional)
- Retention Kits for CPU
- IDE Driver Disk
- Rear I/O Panel for ATX Case (Optional)

Back I/O panel

Jumper Settings

A jumper is several pins which may or may not be covered by a plastic jumper cap. A jumper is used to select different system options.

(A) JP4 CMOS Function Select

JP4	Assignment
<p>1-2 Closed</p>	Normal Operation (default)
<p>2-3 Closed</p>	Clear CMOS Data (*Note)
<p>Open</p>	Onboard Battery Disabled

***Note :** Please follow the procedure as below to clear CMOS Data.

Note : Please follow the procedure as below to clear BIOS Password if your password is lost or forgotten.

CPU Installation/Jumper Setting

Pentium II CPU Installation Procedure

Step 1:

Step 2:

Step 3:

Note : Please remove plastic of the heat sink before installation of the Fan.

Step 4:

(A) JP3 INTEL CPU Clock Select

CPU Speed	CLK RATIO	JP3 (1-2)	JP3 (3-4)	JP3 (5-6)	JP3 (7-8)	JP10
233MHz	66MHz X 3.5	closed	open	open	closed	closed
266MHz	66MHz X 4	closed	closed	closed	open	closed
300MHz	66MHz X 4.5	closed	open	closed	open	closed
333MHz	66MHz X 5	closed	closed	open	open	closed

AWARD BIOS Setup

Entering Setup

Power on the computer and press immediately will allow you to enter Setup. The other way to enter Setup is to power on the Computer, when the below message appears briefly at the bottom of the screen during the POST (Power On Self Test), press key or simultaneously press <CTRL>, <Alt>, and <Esc> keys.

TO ENTER SETUP BEFORE BOOT PRESS CTRL-ALT-ESC OR DEL KEY

If the message disappears before you respond and you still wish to enter Setup, restart the system to try again by turning it OFF then ON or pressing the "RESET" button on the system case. You may also restart by simultaneously pressing < CTRL>, <Alt>, and <Delete> key. If you do not press the keys at the correct time and the system does not boot, an error message will be displayed and you will again be asked to,

PRESS F1 TO CONTINUE, CTRL-ALT-ESC OR DEL TO ENTER SETUP

Main Menu

The on-line description of the highlighted setup function is displayed at the bottom of the screen.

Status Page Setup Menu/Option Page Setup Menu

Press <F1> to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item. To exit the Help Window Press <Esc>.

Control Keys

Up arrow	Move to previous item
Down arrow	Move to next item
Left arrow	Move to the item in left hand
Right arrow	Move to the item in right hand
Esc key	Main Menu-Quit and not save changes into COMS Status Page Setup Menu and Option Page Setup Menu-Exit current page and return to Main Menu
PgUp key	Increase the numeric value or make changes
PgDn key	Decrease the numeric value or make changes
+ key	Increase the numeric value or make changes
- key	Decrease the numeric value or make changes
F1 key	General help, only for Status Page Setup Menu and Option Page Setup Menu
(Shift) F2 key	Change color from total 16 colors. F2 to select color forward, (Shift) F2 to select color backward
F3 key	Reserved
F4 key	Reserved
F5 key	Restore the previous CMOS value from CMOS, only for Option Page Setup Menu
F6 key	Load the default CMOS value from BIOS default table, only for Option Page Setup Menu
F7 key	Load the default
F8 key	Reserved
F9 key	Reserved
F10 key	Save all the CMOS changes, only for Main Menu

Main Menu

Once you enter AWARD BIOS CMOS Setup Utility, the Main Menu(**Figure 1**) will appear on the screen. The Main Menu allows you to select among the items and press <Enter> to accept or enter the sub-menu.

■ Figure 1. Main Menu

ROM PCI/ISA BIOS (xxxxxxxx)
CMOS SETUP UTILITY
AWARD SOFTWARE, INC.

STANDARD CMOS SETUP	INTEGRATED PERIPHERALS

Time, Date, Hard Disk Type...	

Standard CMOS Setup

This setup page includes all the items in a standard compatible BIOS.

BIOS Features Setup

This setup page includes all the items of BIOS special enhanced features.

Chipset Features Setup

This setup page includes all the items of chipset special features.

Power Management Setup

This setup page includes all the items of power management features.

PnP / PCI Configuration

This category specifies the value (in units of PCI bus clocks) of the latency timer for this PCI bus master and the IRQ level for PCI device.

Load Setup Defaults

Chipset defaults indicates the values required by the system for the maximum performance. The OEM manufacturer may change to defaults through MODBIN before the binary image burn into the ROM.

Integrated Peripherals

This setup page includes all the items of Integrated Peripherals features.

Supervisor Password / User Password Setting

Change, set, or disable password. It allows you to limit access to the system and Setup, or just to Setup.

IDE Hdd Auto Detection

Automatically configure hard disk parameters.

Save & Exit Setup

Save CMOS value changes to CMOS and exit setup.

Exit Without Saving

Abandon all CMOS value changes and exit setup.

Standard CMOS Setup Menu

The item in Standard CMOS Setup Menu are divided into categories. Each category includes no, one or more than one setup items. Use the arrow keys to highlight the item and then use the <PgUp> or <PgDn> keys to select the value you want in each item.

■ Figure 2. Standard CMOS Setup Menu

ROM PCI/ISA BIOS (xxxxxxx)
STANDARD CMOS SETUP
AWARD SOFTWARE, INC.

Date (mm:dd:yy) : Mon Mar 3 1997									
Time (hh:mm:ss) : 11 : 37 : 30

Primary Master	:	Auto	0	0	0	0	0	0	Auto
Primary Slave	:	Auto	0	0	0	0	0	0	Auto
Secondary Master	:	Auto	0	0	0	0	0	0	Auto
Secondary Slave	:	Auto	0	0	0	0	0	0	Auto
Drive A	:	1.44MB, 3.5 in.							
Drive B	:	None							
Video	:	EGA/VGA							
Halt On	:	All, But Keyboard							
				Base Memory		:	0K		
				Extended Memory		:	0K		
				Other Memory		:	512K		
				Total Memory		:	512K		
Esc : Quit			↑ ↓ → ← : Select Item				PU/PD/+/-:Modify		
F1 : Help			(Shift) F2 : Change Color						

Date

The Date format is **<day><month><date><year>**.

day	The day, from Sun to Sat, determined by the BIOS and is display-only
date	The date, from 1 to 31 (or the maximum allowed in the month)
month	The month, Jan through Dec
year	The year, from 1994 through 2079

Time

The time format is **<hour><minute><second>**. The time is calculated based on the 24-hour military-time clock. For example, 2 p.m. is 14:00:00.

Hard Disks Type

The categories identify the types of hard disk that have been installed in the computer. There are 46 predefined types and a user definable type. Type 1 to Type 45 are predefined. Type User is user-definable. Type Auto is automatic-define by BIOS.

Press **<PgUp>** or **<PgDn>** to select a numbered hard disk type or type the number and press **<Enter>**. Note that the specifications of your drive must match with the drive table. The hard disk will not work properly if you enter improper information for this category. If your hard disk drive type is not matched or listed, you can use Type User to define your own drive type manually.

If you select type User, related information is asked to be entered to the following items. Enter the information directly from the keyboard and press **<Enter>**. This information should be provided in the documentation from your hard disk vendor or the system manufacturer.

CYLN	number of cylinders
HEAD	number of heads
WPCOM	write precom
SEC	number of sectors
LBA MODE	type of LBA mode
BLK MODE	type of Block mode
PIO MODE	type of PIO
32BIT MODE	type of 32-Bit transfer mode

If a hard disk has not been installed, select NOT Installed and press <Enter>.

Driver A Type/Drive B Type

The category identifies the types of floppy disk drive A or drive B that have been installed in the computer.

None	No floppydrive installed
360K, 5 1/4	5-1/4 inch PC-type standard drive; 360 kilobyte capacity
1.2M, 5 1/4	5-1/4 inch AT-type high-density drive; 1.2 megabyte capacity
720K, 3 1/2	3-1/2 inch double-sided drive; 720 kilobyte capacity
1.44M, 3 1/2	3-1/2 inch double-sided drive; 1.44 megabyte capacity
2.88M, 3 1/2	3-1/2 inch double-sided drive; 2.88 megabyte capacity

Video

The category selects the type of adapter used for the primary system monitor that must match your video display card and monitor. Although secondary monitors are supported, you do not have to select the type in Setup.

EGA/VGA	Enhanced Graphics Adapter/Video Graphics Array. FOR EGA, VGA, SEGA, or PGA monitor adapters.
CGA 40	Color Graphics Adapter, power up in 40 column mode

CGA 80	Color Graphics Adapter, power up in 80 column mode
MONO	Monochrome adapter, includes high resolution monochrome adapters

Halt On

The category determines whether the computer will stop if an error is detected during power up.

No errors	Whenever the BIOS detects a non-fatal error the system will be stopped and you will be prompted.
All errors	The system boot will not be stopped for any error that may be detected.
All, But Keyboard	The system boot will not stop for a keyboard error, it will stop for all other errors.
All, But Diskette	The system boot will not stop for a disk error, it will stop for all other errors.
All, But Disk/Key	The system boot will not stop for a keyboard or disk error, it will stop for all other errors.

Memory

The category is display-only which is determined by POST (Power On Self Test) of the BIOS.

Base Memory

The POST of the BIOS will determine the amount of base (or conventional) memory installed in the system. The value of the base memory is typically 512K for system with 512K memory installed on the motherboard, or 640K for system with 640K or more memory installed on the motherboard.

Extended Memory

The BIOS determines how much extended memory is presented during the POST. This is the amount of memory located above 1MB in the CPU's memory address map.

Other Memory

This refers to the memory located in the 640K address space. This is the

memory that can be used for different applications. DOS uses this area to load device drivers to keep as much base memory free application programs. Most use for this area is Shadow RAM.

BIOS Features Setup

!! WARNING !! The information about BIOS defaults on manual (**Figure 3.4.5.6.8**) is just for reference, please refer to the BIOS installed on board, for update information.

Change / SCT / Disable Password	

When you select this function, the following message will appear at the center of the screen to assist you in creating a password.

ENTER PASSWORD

Type the password, up to eight characters, and press <Enter>. The password typed now will clear any previously entered password from CMOS memory. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <ESC> to abort the selection and not enter a password. To disable password, just press <Enter> when you are prompted to enter password. A message will confirm the password begin disable. Once the password is disabled, the system will boot and you can enter setup freely.

PASSWORD DISABLED

If you select System at Security Option of BIOS Features Setup Menu, you will be prompted for the password every time the system is rebooted or any time you try to enter Setup. If you select Setup at Security Option of BIOS Feature Setup Menu, you will be prompted only when you try to enter Setup.

IDE HDD Auto Detection

Automatically configure hard disk parameters. The parameters on this figure are just for reference.

PIIX4 Patch Files Setup

This program is designed for following versions of BIOSTAR Mainboard to fix the problem that IDE BUS Master, USB and Power management entries cannot be configured correctly in the device manager.

This section describes how to install the software on a system where **Windows 95*** is installed.

"**Windows 95***" means the following versions of Windows 95 operating system:

Version 950 Windows 95 (**Retail Release**)
Version 950A Windows 95 OEM Service Release 1 (**OSR1**)
Version 950B Windows 95 OEM Service Release 2.0 (**OSR2**)
or Windows 95 OEM Service Release 2.0 plus
USB Supplement (**OSR2.1**)

1. Check the System Requirements. Windows 95* must be fully installed and running on the system prior to running this software.
2. Close any running applications.
3. Remove references to installed real-mode IDE device drivers in the **AUTOEXEC.BAT** and **CONFIG.SYS** files (especially any drivers that control ATAPI CD-ROM

and special IDE features). Use the Notepad utility to do this.

4. The driver files are stored in an integrated application setup program. This program is a Windows 95* program that allows the driver files to be INSTALLED.
Execute the driver setup program.
*** Run **BSFIX.EXE**.
5. Click '**Start**' on Main Screen to begin the install procedure.
NOTE: If you click '**Cancel**', program will terminate.
6. After the install procedure completed, click '**OK**' to restart the system when prompted to do so. If you don't want to reboot immediately, you must remember to reboot your system later!
7. Follow the screen instructions and use default settings to complete the setup when Windows 95* is re-started.
Upon re-start, Windows 95* will display that it has found an **Intel PCI Bus Master IDE controller hardware** and also installing hardware for it.
If a "**New Hardware Found**" dialog box is displayed requesting the location of the drivers, use the mouse to click on the scrollbar and click on the **<Windows 95* directory> \ System \ IOSubSys path:**
For example:
 - a. Click on '**C:\WINDOWS\SYSTEM\IOSUBSYS**'
 - b. Click '**OK**'.
8. Select '**Yes**', when prompted to re-start Windows 95*.

9. Select '**Yes**' again, when you prompted to re-start Windows 95*.
