Key Features

- ➢ Super 7™ Platform
- ➢ 512KByte L2 cache
- ➢ Supports CPU voltage from 2.0v to 3.5v in 0.1v increments
- ➢ PC97, ACPI, Ultra DMA/33MHz
- ➢ Power-on by modem or alarm

- ➢ Supports Wake On LAN (WOL)
- ➢ Fan-off in Suspend mode
- ➢ 5x32-bit bus mastering PCI slots
- ➢ 2xUSB ports, 1xIrDA port
- ➢ Supports multiple-boot function
- ➢ DMI utility

1

Chapter 1

INTRODUCTION

The **SY-5EMM** AGP/PCI mainboard is a high-performance Micro-ATX form-factor system board. **SY-5EMM** uses the ETEQ82C663 PCI Chipset technology and supports Pentium® class processors. This mainboard is fully compatible with industry standards and adds many technical enhancements.

1-1 KEY FEATURES

- **CPU**
  - ➢ Supports Intel Pentium Processor P54C/P55C series CPUs featuring speeds of 100-233 MHz
  - ➢ Supports Cyrix 6x86/6x86L/6x86MX CPUs with PR150-PR266 speeds and Cyrix M Ⅱ-300-350 CPU
  - ➢ Supports AMD K5 CPUs running at PR100-PR166 speeds, AMD K6 CPUs running at speeds of 166-300 MHz speeds, and AMD K6-2 266-350 CPU
  - ➢ Features Socket 7 for CPU easy upgrade
  - ➢ Supports P54C/P55C series SIMM Mode and CPU Stop Clock
- **L2 Cache Controller**
  - ➢ On-board 512KB Level 2 Pipeline Burst SRAM Cache
- **DRAM Controller**
  - ➢ Supports 2 strips of 168-pin SDRAM unbeffured DIMM 2 x 168-pin DIMM banks support 8/16/32/64/128/256 MB unbuffered DIMM modules
  - ➢ Support 2 strips of 72-pin FPM/EDO SIMM 2 x 72-pin SIMM banks support 8/16/32/64 MB SIMM modules
  - ➢ Memory configuration:
    - ◆ System memory: 8MB to 640MB with EDO/SDRAM

SY-5EMM PLATFORM FEATURES

Board Size	4-layer PCB, 20x24.5cm(7.9"x9.5"), Micro-ATX Form Factor
Socket 7	Socket for Pentium® class CPUs

with Host Bus frequency of 66/100MH; Supports:
> Intel Pentium® Processors P54C/P55C (100-233MHz)
> Cyrix 6x86 ™(PR166+-PR200+),
> Cyrix 6x86 MX ™(PR166-PR266) and Cyrix M II ™ (300~350)
> AMD K5 ™(PR100-PR166), and AMD K6 ™(166-300) and AMD K6 ™2 (266~350)

Chipset	ETEQ82C663 PCI/AGP Bus Chipset
ATX Power	20-pin Male Connector
CPUFAN	3-pin CPU Cooling Fan Connector
CHAFAN	3-pin Chassis Cooling Fan Connector
Memory	DIMM Bank (DIMM1 & DIMM2)

> 168-pin Unbuffered SDRAM DIMM Module
> Supports 8~256MB DIMM in each Bank
> Supports ECC configuration

SIMM Bank (SIMM1 &SIMM2)
> Supports 8-64MB
> 2strips of 72-pin SIMM

BIOS	System BIOS built-in, Award BIOS

> APM, ACPI and "Plug-and-Play" function
> Supports multiple-boot function
> DMI utility

PCI Slots	3 x 32-bit Bus Mastering Slots
ISA Slots	2 x 16-bit ISA Slots
IDE1, IDE2	2 x 40-pin Bus Mastering E-IDE/ATAPI Ports

> IDE1: Primary IDE Device Connector
> IDE2: Secondary IDE Device Connector
> Supports Ultra DMA/33

FDC	1 Floppy Disk Drive (FDD) Port

(Supports 1.2MB/1.44MB/2.88MB and LS120/3-mode FDD)

SIR	5-pin Serial Infrared Device Connector
Keylock	5-pin KeyLock Connector
Reset	2-pin Reset Switch Connector
Speaker	4-pin PC Speaker Connector
TB_LED	2-pin Turbo LED Connector

HDD_LED	2-pin IDE Device LED Connector
PWRBT	ATX Power On/Off Switch 2-pin Connector
JP5	CMOS Clear Jumper
JP8	CPU bus clock frequency Jumper
JP9, JP10	SDRAM frequency Jumpers
JP1, JP2	Single or Dual voltage selection Jumper
JP30	CPU Voltage Selection Jumper
JP16, JP17	2 x CD Line-in 4-pin Connectors
JP19, JP20	Enabled/Disabled Onboard Sound Function Jumpers
JP44	WOL (Wake-On-LAN) 3-pin Connector
SW1	CPU frequency Settings Jumper

BACK-PANEL FEATURES

PRT	1 x Onboard 26-pin Female Parallel Printer Port
COM1, COM2	2 x Onboard RS-232 Serial Port
PS/2 KB	1 x Onboard PS/2 Keyboard Connector
PS/2 Mouse	1 x Onboard PS/2 Mouse Connector
USB1, USB2	2 x Onboard USB (Universal Serial Bus) Connectors
JOYSTICK	1 x Onboard 15-pin Joystick Port
LINE-OUT	1 x Onboard Line-out Audio Stereo Jack
LINE-IN	1 x Onboard Line-in Audio Stereo Jack
MIC JACK	1 x Onboard Microphone Stereo Jack

1-2 HANDLING THE MAINBOARD

To avoid damage to your mainboard, follow these simple rules while unpacking:

➢ Before handling the mainboard, ground yourself by grasping an unpainted portion of the system's metal chassis.

➢ Remove the mainboard from its anti-static packaging. Hold the mainboard by the edges and avoid touching its components.

➢ Check the mainboard for damage. If any chip appears loose, press carefully to seat it firmly in its socket.

> *Warning:* Do not apply power if the mainboard appears damaged. If there is damage to the board, contact your dealer immediately.

1-3 ELECTROSTATIC DISCHARGE PRECAUTIONS

Make sure to ground yourself before handling the mainboard or other system components. Electrostatic discharge can easily damage the components. Note that you must take special precautions when handling the mainboard in dry or air-conditioned environment.

To protect your equipment from electrostatic discharge, take the following precautions:

➢ Do not remove the anti-static packaging until you are ready to install.

➢ Ground yourself before removing any system component from its protective anti-static packaging. (To ground yourself, grasp the expansion slot covers or other unpainted portions of the computer chassis.)

➢ Frequently ground yourself while working or use a grounding strap.

Chapter 2

HARDWARE SETUP

Congratulations on your purchase of **SY-5EMM** Super 7 ™
Mainboard. You are about to install and connect your new
mainboard.

Note: Do not unpack the mainboard from its protective
anti-static packaging until you have made the following
preparations.

2-1 Preparations

Gather and prepare all the following hardware equipment to
complete the installation successfully:

1. Pentium processor with CPU cooling fan.
2. DIMM memory module
3. Computer case and chassis with adequate power supply unit
4. Monitor
5. Keyboard
6. Pointing Device (PS/2 mouse)
7. Speaker(s) (optional)
8. Disk Drives: HDD, CD-ROM, Floppy drive …
9. External Peripherals: Printer, Plotter, and Modem (optional)
10. Internal Peripherals: Modem and LAN cards (optional)

Frequently Asked Questions:

● **Do I need to install a sound card?**
The answer is NO since, for your convenience, the SY-5EMM
mainboard already features built-in audio-stereo ports (Line-in,
Line-out, and Microphone).

● **What kind of speaker can connect to "Line-out" port?**
This motherboard requires a speaker with built-in amplifier to
generate proper output sound volume.

2-2 Unpacking the Mainboard

When unpacking the mainboard, check for the following items:

➢ The **SY-5EMM** ETEQ82C663 PCI/AGP Mainboard

➢ This *Quick Start Guide* *

➢ The Installation CD-ROM *

➢ One IDE Device Flat Cable

➢ One Floppy Disk Drive Flat Cable

* If your board comes with a driver disc and a paper manual, the Quick Start Guide and the CD-ROM are not included in the package.

> **STOP** *Warning:* Do not unpack the mainboard from its anti-static packaging until you are ready to install it.

Like most electronic equipment, your mainboard may be damaged by electrostatic discharge. To avoid permanent damage to components ground yourself while working by using a grounding strap. Otherwise, ground yourself frequently by touching the unpainted portion of the computer chassis to drain the static charges.

Handle the mainboard carefully, holding it by the edges.

You are now ready to start the installation.

2-3 Installation Guide

We will now begin the installation of the mainboard. Please follow the step-by-step procedure designed to lead you to a complete and correct installation.

Step 1.   CPU Installation

Follow these instructions to install your Pentium ® class processor correctly.

Locate the CPU socket labeled Socket 7 on your mainboard and note the distinctive pinhole arrangement.

Note the corresponding pinhole arrangement on the processor.
Follow these steps to install the CPU in the Socket 7:

1. Lift the socket handle up to a vertical position.
2. Align the blunt edge of the CPU with the matching pinhole distinctive edge on the socket.
3. Seat the processor in the socket completely and without forcing.
4. Then close the socket handle to secure the CPU in place.
Step 2. CPU Fan Installation

Your Pentium® processor kit comes with a cooling fan. Mount the fan on the processor according to the instructions provided by the manufacturer. The fan is a key component that will ensure system stability. The fan prevents overheating, therefore prolonging the life of your CPU.

Note: Remember to connect the fan to the appropriate power source.

Step 3. CPU Voltage Setting (JP30,JP1 and JP2)

JP1   JP2

Single or Dual
Voltage Selection

JP30

8 ○ ○ 7
6 ○ ○ 5
4 ○ ○ 3
2 ○ ○ 1

CPU Voltage
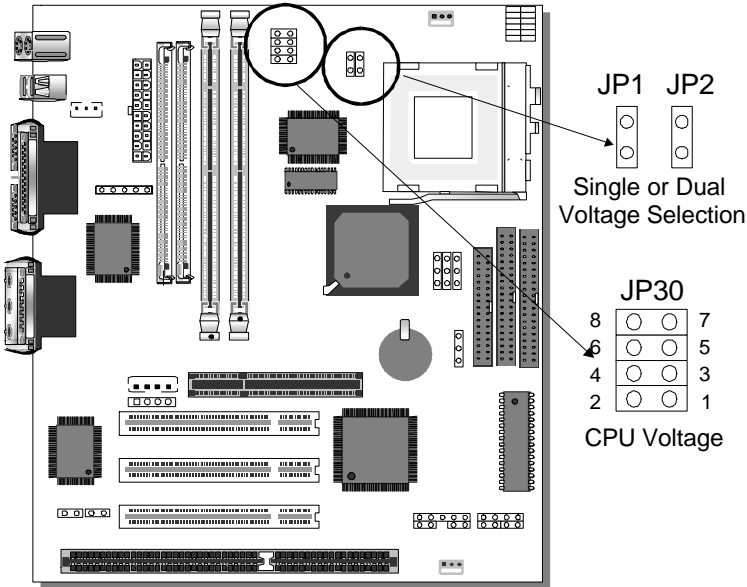

Please verify the correct voltage with your dealer before installation.
Use the following tables to set JP30 to the proper "Voltage Value",
according to the specifications marked on your CPU: This
mainboard comes with pre-configured setting of CPU voltage.
However the voltage of your CPU maybe different with the default
setting.

● **CPU VOLTAGE SETTING (JP30,JP1 and JP2)**
JP30 is used to set the CPU core voltage, JP1 and JP2 are used to
select the CPU voltage type single voltage or dual voltage.
There are two kinds of CPU voltages currently on the market
depending on the CPU manufacturer:

➢ Single Voltage   (CPU: P54C, AMD-K5, Cyrix 6x86)
➢ Dual Voltage   (CPU: P55C, AMD-K6, AMD-K6-2 Cyrix
    6x86L,Cyrix 6x86MX, Cyrix M II)

10
Those processors may come in various voltages on different markets. Therefore, always make sure you know the type of the CPU you are installing and adjust the settings on JP30 accordingly.

This motherboard supports CPU core voltages from 2.0 to 3.52V in 0.1V increments. Use the following tables to set the CPU voltage jumpers JP30 to match the voltage value of your CPU:

CPU Core Voltage Setting: JP30

Voltage Value	1-2	3-4	5-6	7-8
3.5V	**close**	**close**	**close**	**close**
3.4V	open	**close**	**close**	**close**
3.3V	**close**	open	**close**	**close**
3.2V	open	open	**close**	**close**
3.1V	**close**	**close**	open	**close**
3.0V	open	**close**	open	**close**
2.9V	**close**	open	open	**close**
2.8V	open	open	open	**close**
2.7V	**close**	**close**	**close**	open
2.6V	open	**close**	**close**	open
2.5V	**close**	open	**close**	open
2.4V	open	open	**close**	open
2.3V	**close**	**close**	open	open
2.2V	open	**close**	open	open
2.1V	**close**	open	open	open
2.0V	open	open	open	open
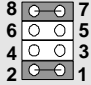

Single or Dual voltage selection: JP1 and JP2

Voltage Type	JP1	JP2
Single Voltage (P54C, AMD-K6, Cyrix 6x86)		
Dual Voltage (P55C, AMD-K6, AMD-K6-2, Cyrix 6x86L, Cyrix 6x86MX, Cyrix M II)		

Voltage Settings for Various Processors

Processor Voltage Setting	Voltage Value: JP30	JP1	JP2
Intel P54C - P100 Intel P54C - P133	Single Voltage V_{ORE}:3.3V $V_{I/O}$:3.3V (pins 8-7, 6-5, 4-3 closed)	(closed)	(open)
Intel P54C - P166 Intel P54C - P200	Single Voltage V_{ORE}:3.5V $V_{I/O}$:3.5V (pins 8-7, 6-5, 4-3, 2-1 closed)	(closed)	(open)
Intel P55C - P166 Intel P55C - P200 Intel P55C - P233	Dual Voltage V_{ORE}:2.8V $V_{I/O}$:3.3V (pins 8-7 closed)	(open)	(closed)
AMD K5 - PR100 AMD K5 - PR133 AMD K5 - PR166	Single Voltage V_{ORE}:3.5V $V_{I/O}$:3.5V (pins 8-7, 6-5, 4-3, 2-1 closed)	(closed)	(open)
AMD K6 166 AMD K6 200	Dual Voltage V_{ORE}:2.9V $V_{I/O}$:3.3V (pins 8-7, 2-1 closed)	(open)	(closed)
AMD K6 233	Dual Voltage V_{ORE}:3.2V $V_{I/O}$:3.3V (pins 8-7, 6-5 closed)	(open)	(closed)
AMD K6 266 AMD K6 300 AMD K6-2 266 AMD K6-2 300 AMD K6-2 333 AMD K6-2 350	Dual Voltage V_{ORE}:2.2V $V_{I/O}$:3.3V (pins 4-3 closed)	(open)	(closed)

Voltage Settings for Various Processors (continued)

Processor Voltage Setting	Voltage Value: JP30	JP1	JP2
Cyrix 6x86(L) PR166+ Cyrix 6x86(L) PR200+	The Cyrix 6x86(L) come in several versions with different voltages. Please ask your dealer for the correct voltage.		
Cyrix 6x86MX-PR166* Cyrix 6x86MX-PR200* Cyrix 6x86MX-PR233* Cyrix 6x86MX-PR266* Cyrix M II 300* Cyrix M II 333* Cyrix M II 350*	Dual Voltage V_{ORE}:2.9V $V_{I/O}$:3.3V		
* Set the proper CPU voltage according to the marking on the CPU.			

Step 4.   CPU Frequency Setting (SW1)

SW1
Host Bus Frequency

SW1
Frequency Multiplier
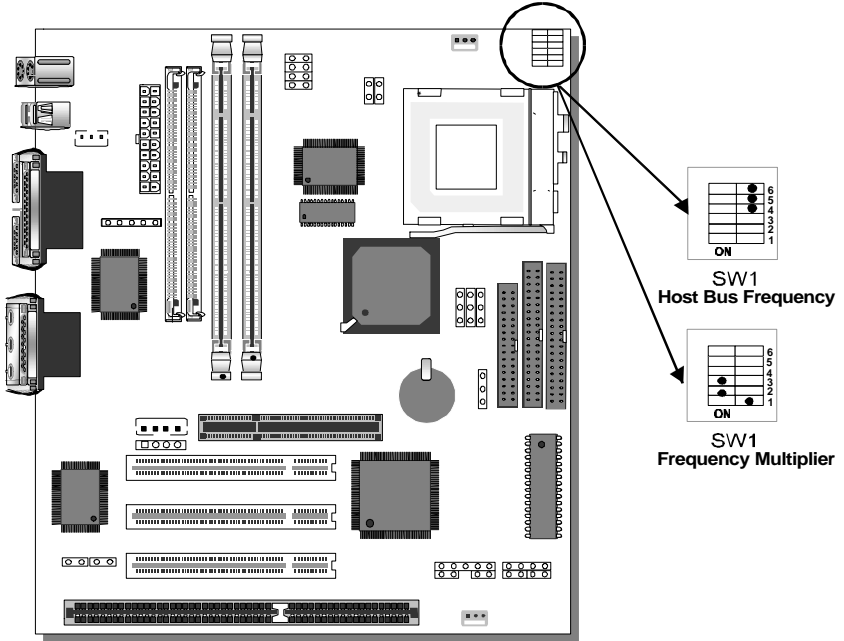

The SY-5EMM mainboard is designed to support most Pentium®
class processors currently on the market. Jumpers SW1 is used to
configure the mainboard frequency parameters to match the
working frequency of your CPU.

● **CPU FREQUENCY SETTING (SW1)**

Configure the SW1 jumpers to the settings that match your CPU speed. Refer to the following tables to set the Frequency Multiplier and Host Bus Frequency of your CPU:

Frequency Multiplier　　　*Host Bus Frequency*

Multiplier	1	2	3
1.5/3.5x	off	off	off
2.0x*	**on**	off	off
2.5x	**on**	**on**	off
3.0x	off	**on**	off
4.0x	**on**	off	**on**
4.5x	**on**	**on**	**on**
5.0x	off	**on**	**on**

Host Bus Frequency	4	5	6
66MHz	off	off	off
75MHz	off	**on**	off
83MHz	**on**	**on**	off
95MHz	**on**	off	**on**
100MHz	off	off	**on**
112MHz	off	**on**	**on**
124MHz	**on**	off	off

Example: If the working frequency of your CPU is 133MHz, then select Multiplier=2.0x and Host Bus Frequency=66Mhz accordingly.

Also, as newer and higher frequency CPUs may not be listed in this section, please refer to the tables *CPU Frequency Settings for Various Processors* on page 8 for complementary information.

Please refer to the following table that gives you the correct frequency settings for the specific brand and model of CPU you are installing on this mainboard.

Frequency Settings for Intel® Processors

Processor Frequency Setting	Ratio	Bus Clock	AGP Clock	PCI Clock	Frequency Setting: SW1
Intel P54C - P100	1.5 x	66MHz	66MHz	33MHz	
Intel P54C - P133	2.0 x	66MHz	66MHz	33MHz	
Intel P54C - P166	2.5 x	66MHz	66MHz	33MHz	
Intel P54C - P200	3.0 x	66MHz	66MHz	33MHz	
Intel P55C - P166	2.5 x	66MHz	66MHz	33MHz	
Intel P55C - P200	3.0 x	66MHz	66MHz	33MHz	
Intel P55C - P233	3.5 x	66MHz	66MHz	33MHz	
* Set the proper CPU frequency according to the marking on the CPU.					
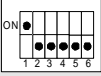

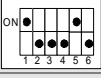

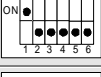

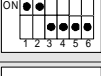

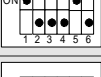

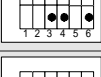

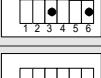

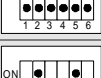

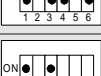

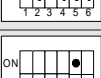

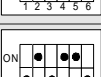

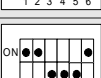

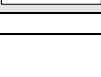

Frequency Settings for AMD ™Processors
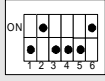

Processor Frequency Setting	Ratio	Bus Clock	AGP Clock	PCI Clock	Frequency Setting: SW1
AMD K5 - PR100	1.5 x	66MHz	66MHz	33MHz	
AMD K5 - PR133	2.0 x	66MHz	66MHz	33MHz	
AMD K5 - PR166	2.5 x	66MHz	66MHz	33MHz	
AMD K6 - 166	2.5 x	66MHz	66MHz	33MHz	
AMD K6 - 200	3.0 x	66MHz	66MHz	33MHz	
AMD K6 - 233	3.5 x	66MHz	66MHz	33MHz	
AMD K6 - 266	4.0 x	66MHz	66MHz	33MHz	
AMD K6 - 300	4.5 x	66MHz	66MHz	33MHz	
AMD K6-2 266	4.0 x	66MHz	66MHz	33MHz	
AMD K6-2 300	3.0 x	100MHz	66MHz	33MHz	
AMD K6-2 333	3.5 x	95MHz	63.4MHz	31.7MHz	
AMD K6-2 350	3.5 x	100MHz	66MHz	33MHz	

* Set the proper CPU frequency according to the marking on the CPU.

Frequency Settings for Cyrix ™Processors

Processor Frequency Setting	Ratio	Bus Clock	AGP Clock	PCI Clock	Frequency Setting: SW1
Cyrix 6x86 - PR166+	2.0 x	66MHz	66MHz	33MHz	
Cyrix 6x86 - PR200+	2.0 x	75MHz	75MHz	37.5MHz	
Cyrix MX - PR166**	2.0 x	66MHz	66MHz	33MHz	
Cyrix MX - PR200**	2.5 x	66MHz	66MHz	33MHz	
Cyrix MX - PR200**	2.0 x	75MHz	75MHz	37.5MHz	
Cyrix MX - PR233**	2.5 x	75MHz	75MHz	37.5MHz	
Cyrix MX - PR266**	2.5 x	83MHz	55MHz	27.5MHz	
Cyrix M II - 300**	3.5 x	66MHz	66MHz	33MHz	
Cyrix M II - 300**	3.0 x	75MHz	75MHz	37.5MHz	
Cyrix M II - 333**	4.0 x	66MHz	66MHz	33MHz	
Cyrix M II - 333**	3.5 x	75MHz	75MHz	37.5MHz	
Cyrix M II - 333**	3.0 x	83MHz	55MHz	27.5MHz	
Cyrix M II - 333**	2.5 x	100MHz	66MHz	33MHz	

Frequency Settings for Cyrix ™Processors (Continued)

Processor Frequency Setting	Ratio	Bus Clock	AGP Clock	PCI Clock	Frequency Setting: SW1
Cyrix M II - 350**	3.0 x	100MHz	66MHz	33MHz	
** Set the proper CPU frequency according to the marking on the CPU. Over specification is not guaranteed.					

Step 5. Set JP8,JP9,JP10 for SDRAM frequency

JP8 is used to indicate the frequency of the CPU bus clock to the ETEQ chipset.

JP9 and JP10 are used to determine that the SDRAM is running at the frequency of the CPU bus clock or the AGP clock.

CPU BUS Clock	AGP BUS Clock	JP10	JP8	JP9	SDRAM Clock
66MHz	66MHz	1-2	2-3	2-3	66MHz
75MHz	75MHz	1-2	2-3	2-3	75MHz
83MHz	55MHz	2-3	1-2	1-2	55MHz
		1-2	1-2	2-3	83MHz
95MHz	63.4MHz	2-3	1-2	1-2	63.4MHz
		1-2	1-2	2-3	95MHz
100MHz	66MHz	2-3	1-2	1-2	66MHz
		1-2	1-2	2-3	100MHz
112MHz	75MHz	2-3	1-2	1-2	75MHz
		1-2	1-2	2-3	112MHz
124MHz	82.6MHz	2-3	1-2	1-2	82.6MHz
		1-2	1-2	2-3	124MHz

Note: Use 8ns or faster SDRAM modules (PC100 compliant) when SDRAM is set to run at the frequency of 95/100 MHz.

Step 6.   DRAM Module Installation

This mainboard supports two strips of 72-pin 5V FPM/EDO DRAM (SIMM) from 4 to 64 MB and two strips 168-pin 3.3V/5V Unbuffered DIMM modules from 8 to 256 MB. The mainboard requires SIMM modules of at least 70ns access time.
This mainboard supports both EDO and SDRAM types of memory modules.

Note:

Do not install EDO type of DIMM modules if you already use SDRAM in any DIMM bank..

● **MEMORY CONFIGURATION**

This mainboard features 2 x DIMM Banks for 168-pin 3.3V unbuffered DIMM modules and 2 x SIMM Banks for 72-pin

Your board comes with tow DIMM sockets and two SIMM sockets, providing support for up to 512MB of main memory using DIMM

modules from 8MB to 256MB;SIMM modules from 4MB to 64MB.
For 66MHz host bus CPUs use 12ns or faster DIMM modules; for
83MHz or faster host bus CPUs use 8ns modules.

Memory configuration Table

MEMORY CONFIGURATION	SIMM Bank	DIMM Banks	
	Bank 1,2	DIMM 1	DIMM 2
RAM Type	FPM/EDO/BEDO	EDO/SDRAM	EDO/SDRAM
Single RAM Module Size (MB)	4/8/16/32/64	8/16/32/64/128/ 256	8/16/32/64/128/ 256

Notice: 1.You must install two SIMM modules to complete the SIMM Bank

2. Do not use EDO type of DIMM if you already use SDRAM.

Step 7.   IDE Device Installation (HDD, CD-ROM)

This mainboard offers two primary and secondary IDE device
connectors (IDE1, IDE2.) It can support up to four high-speed HDD
or CD-ROM.

Connect one side of the 40-pin flat cable to the IDE device (HDD or
CD-ROM) and plug the other end to the primary (IDE1) or secondary
(IDE2) directionally keyed IDE connector on the mainboard.

This mainboard can support up to four HDDs.

Step 8.   Floppy Drive Installation

The system supports 5 possible floppy drive types: 720 KB, 1.2 MB,
1.44 MB, 2.88 MB, and LS-120. In addition, this mainboard supports
a 3-mode (720KB/1.25MB/1.44MB) floppy commonly used in Japan.
Connect one side of the 34-pin flat cable to the floppy drive and plug
the other end to the floppy drive connector on the mainboard.

This mainboard can support up to 2 floppy drives.

Step 9.   Front Panel Connections

Power LED Keylock Speaker
Reset PWRBT Turbo LED HDD LED
Plug the computer case's front panel devices to the corresponding connectors on the mainboard.

1.   Power LED & KeyLock

Plug the Power LED cable into the 5-pin Keylock connector.
Some systems may feature a KeyLock function with a front panel switch for enabling or disabling the keyboard. Connect the KeyLock switch to the 5-pin Keylock connector on the mainboard.
Please install according to the following pin assignment: pin 1,3 are for Power LED and pin 4,5 are for Keylock.

2.   Reset

Plug the Reset push-button cable into the 2-pin Reset connector on the mainboard. Pushing the Reset button on the front panel will cause the system to restart the boot-up sequence.

3.   Speaker

Attach the 4-pin PC speaker cable from the case to the Speaker connector on the mainboard.

4.   Turbo LED

Connecting the 2-pin Turbo LED cable to the corresponding Turbo LED connector will cause the LED to light whenever the system is in Turbo mode.

The manufacturer has permanently set this mainboard in Turbo mode due to most hardware and software compliance to turbo mode.

5.   IDE LED

Attach the 2-pin IDE device LED cable to the corresponding IDE LED connector on the mainboard. This will cause the LED to lighten when an IDE (HDD, CD-ROM) device is active.

6.   ATX Power On/Off Switch

Attach the 2-pin momentary type switch to the PWRBT connector for turning On or Off your ATX power supply.

Step 10. Back Panel Connections

All external devices such as the keyboard, printer, PS/2 mouse, modem, USB, can be plugged directly onto the mainboard back panel.

Only after you have fixed and locked the mainboard to the computer case can you start connecting the external peripheral devices.

When connecting an external device, use the following figure to locate and identify which back panel connector to plug the device to.

PS/2 Mouse Connector
PS/2 KB Connector
USB2
USB1
COM1
COM2
PRT
1.   Onboard Serial Port COM1,COM2

External peripherals that use serial transmission scheme include:

-   serial mouse,
-   and modem.

Plug the serial device cables directly into the COM1or COM2 9-pin male connector located at the rear panel of the mainboard.

2.   Parallel Port PRT

This parallel port is used to connect the printer or other parallel devices.

Plug the parallel device cable into the 26-pin female connector located at the rear panel of the mainboard.

3.   PS/2 Keyboard

Plug the keyboard jack directly into the 6-pin female PS/2 keyboard connector located at the rear panel of the mainboard.

4.   PS/2 Mouse

Similarly, plug the mouse jack directly into the 6-pin female PS/2 mouse connector.

5.   Universal Serial Bus USB1/USB2

This mainboard provides two USB ports for your additional devices. Plug the USB device jack into the available USB connector USB1 or USB2.

-   USB devices under Win98 are allowed.
-   With Win95, use the flow HCI V1.1 specifications.

1.   Wake-On-LAN (WOL)

Attach the 3-pin connector from the LAN card which supports the Wake-On-LAN   (WOL) function to the JP44 connector on the mainboard. This WOL function lets users wake up the connected computer through the LAN card.

Please install according to the following pin assignment:

```
            Wake-On-LAN
         JP44 Pin Assignment

  MP_Wakeup  GND    5VSB

              3   2   1
               ○   ○   ■
```
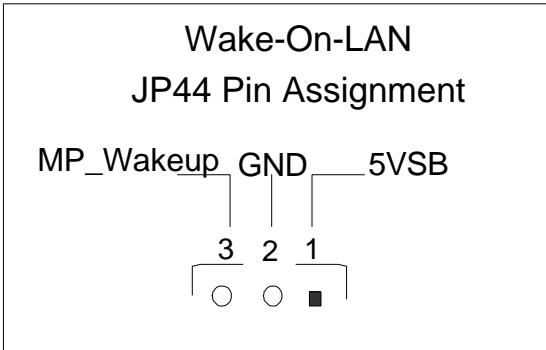

2.   Infrared (IR)

Plug the 5-pin infrared device cable to the IR connector. This will enable the infrared transfer function. This mainboard meets both the ASKIR and HPSIR specifications.

Please install according to the following pin assignment:

```
      Serial Infrared (SIR) Connector
            SIR Pin Assignment

     VCC         IRRX GND      IRTX

           ■      ○   ○   ○
           1   3   2   4   5
```
Step 11. CPU Cooling Fan Installation

After you have seated the CPU cooling fan properly on the processor, attach the 3-pin fan cable to the CPUFAN connector on the mainboard.

To avoid damage to the system, install according to the following pin assignment:

CPU Cooling Fan
CPUFAN Pin Assignment

3   2   1

NC   12V   GND
Step 12. Chassis Cooling Fan Installation

After you have seated the Chassis cooling fan properly on the processor, attach the 3-pin fan cable to the CHAFAN connector on the mainboard.

To avoid damage to the system, install according to the following pin assignment:

Chassis Cooling Fan
CHAFAN Pin Assignment

3   2   1

NC   12V   GND
Step 13. ATX Power Supply

Plug the connector from the power directly into the 20-pin male ATX
PW connector on the mainboard, as shown in the following figure.
ATX Power

> *Warning:* Follow these precautions to preserve your
> mainboard from any remnant currents when connecting to
> ATX power supply:
>
> **Turn off the power supply and unplug the power cord
> of the ATX power supply before connecting to ATX PW
> connector.**

The mainboard requires a power supply with at least 200 Watts and
a "power good" signal. Make sure the ATX power supply can take at
least 10 mA load on the 5V Standby lead (5VSB) to meet the
standard ATX specification.

* Note: If you use the Wake-On-LAN (WOL) function, make sure the
ATX power supply can support at least 720 mA on the 5V Standby
lead (5VSB).

Please install the ATX power according to the following pin
assignment:

ATX Power

3.3V		3.3V
-12V		3.3V
GND		GND
PS-ON		5V
GND		GND
GND		5V
GND		GND
-5V		PW-0K
5V		5VSB
5V		12V
➢ **Pay special care to the directionality.**

Step 14. CMOS Clearing (JP5)

After you have turned off your computer, clear the CMOS memory
by momentarily shorting pins 2-3 on jumper JP5, for a few seconds.
Then restore JP5 to the initial 1-2 jumper setting in order to recover
and retain the default settings.
CMOS Clearing	Clear CMOS Data	Retain CMOS Data
JP5 Setting	Short pin 2-3 for a few seconds to clear the CMOS O ⊙—⊙ 1 2 3	Short pin 1-2 to retain new settings ⊙—⊙ O 1 2 3
Note: You must unplug the ATX power cable from the ATX power connector when performing the CMOS Clear operation.		

Step 15. Onboard Sound Jumpers (JP19,JP20)

The onboard audio features of your mainboard are controlled by
jumpers JP19 and JP20. You can choose to enable or disable the
available sound function by setting JP19 and JP20 accordingly.

● Open pins on jumpers JP19 and JP20 to enable the onboard sound
function. Then, you can plug your external audio devices such as
amplified-speakers, CD-player, and microphone to the mainboard
Line-out, Line-in and Mic ports right after the mainboard is installed.
(You do not need to install any sound card.)

● To disable the onboard sound options short pins on jumpers JP19 and JP20.

Onboard Sound	Enable		Disable	
JP19	Open jumpers to enable the	⊡ ⊙ ⊙	Short jumpers to disable the	⊡ ⊙─⊙
JP20	onboard sound function.	⊡ ⊙ ⊙	onboard sound function.	⊡ ⊙─⊙

Step 16. MULTI I/O ADDRESSES

Default settings for multi-I/O addresses are as follows:

Port	I/O Address	IRQ	Status
LPT1	378H	7	ECP + EPP
COM1	3F8H	4	
COM2	2F8H	3	

> *Warning:* If a default I/O address conflicts with other I/O cards such as sound card, you must change one of the I/O addresses to remedy to this address conflict. (I/O addresses can be adjusted from the BIOS Setup Utility)

Step 17. CACHE CONFIGURATION

This mainboard has a built-in 512KB Level 2 Pipelined Burst cache onboard to improve the system performance.

The cache size and RAM locations are specified as follows:

Cache Size	Cache RAM	TAG RAM	Cacheable Range
512 KB	64K x 64 on U3	32K x 8 on U5	WT: 128 MB WB: 64 MB

Step 18. Onboard Joystick Port

A joystick, in computer graphics, is a lever with at least two degrees of freedom used as an input device. The joystick is normally used as a locator in at least a 2-D plane.

The joystick device is most widely used in video games applications. Attach the joystick cable to the 15-pin JOYSTICK port at the rear panel of your mainboard.

Step 19. Onboard Audio

This mainboard features three built-in audio-stereo ports (labeled line-in, line-out, and mic jack) convenient to directly plug-in all your external audio devices. Your SY-5EMM mainboard is making use of the ALS120 sound chipset technology and applications programs.

Note: Please refer to Chapter 5- *ALS120 Audio Driver Installation* for a detailed procedure on how to install the audio driver depending on the particular environment (DOS, Win NT 3.5/4.0, Win 95, Win 3.1) installed on your system.

Features

- Single, mixed-signal, high performance VLSI sound ASIC
- Built-in 3D Sound Effect Processor
- Built-in ALSFM Synthesizer with external wavetable support
- ISA plug-and-Play support logic
- Supports Sound Blaster ADPCM decompression
- MPU-401 MIDI controller with FIFO
- Support 8-bit Type F DMA playback
- Software selectable DMA lines (0, 1, 3)
- 8/16-bit mono/stereo digital audio from 4 kHz to 48 kHz
- Enhanced normal & digital game port support
- MIDI port with input and output FIFO
- 16-bit PNP address I/O decoder

Software Support

● Windows 3.1
● Windows 95/98
● Windows NT 3.5/4.0
● Windows Sound System
● All DOS-based Games

Compatibility

● Sound Blaster ™
● Sound Blaster Pro ™
● Sound Blaster 16 ™Emulation
● Windows Sound System ™

Connecting your Audio Devices

You can connect audio devices to the following ports:

- headphones or pre-amplified speakers to the "line-out" port;
- a line-in device such as CD/Cassette player to the "line-in" port;
- a microphone to the "mic" port.
Connecting Speakers

You can connect external speakers to the "Line-out" port on your SY-5EMM mainboard.

LINE-OUT   LINE-IN   MIC JACK

(Amplified Speakers)
> *Note:* This mainboard requires a speaker with **built-in amplifier (Amplified Speaker)** to generate proper output sound volume.

Using the Avance Audio Driver

To access the Avance ™Sound Mixer audio driver controls, follow these steps:

1.   Open the Windows 95/98 **[Start]** menu.

2.   Select **[Programs], [Accessories],** and **[Multimedia]** path.

3.   Find and click the **[Volume Control]** option to run the application.

The audio control panel appears as shown in the following figure. The audio mixer gives control of the sound inputs of all audio devices. You can adjust the internal volume and balance of each individual audio device. Also, this audio mixer lets you apply ave sound effects.

> ***Important:*** The **[Playback]** volume controls the master output sound volume of your system. Depending on the speaker you use you will need to adjust both the volume control on the speaker itself and the audio volume control menu under Windows 95/98 to get the proper sound output.
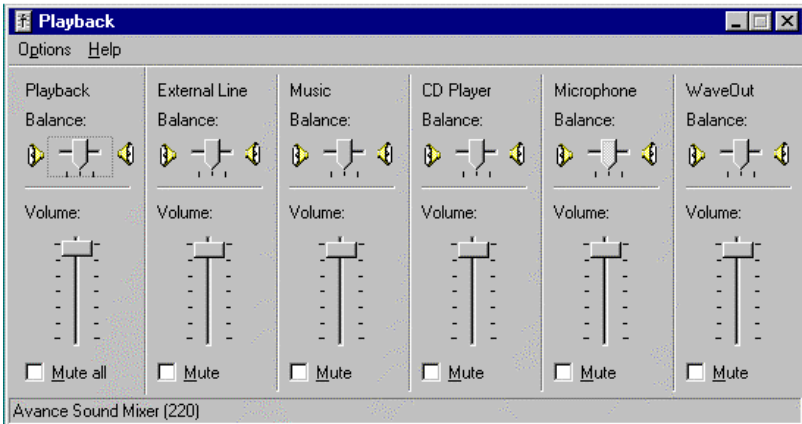

Step 20. Power On

You have now completed the hardware installation of your mainboard successfully.

1. Turn the power on
2. To enter the BIOS Setup Utility, press the <DEL> key while the system is performing the diagnostic checks,

> *Note :* If you have failed to enter the BIOS, wait until the boot up sequence is completed. Then push the RESET button and press <DEL> key again at the beginning of boot-up, during diagnostic checks.

Repeat this operation until you get the following screen.

3. The BIOS Setup screen appears:

```
                    ROM PCI/ISA BIOS
                   CMOS SETUP UTILITY
                  AWARD SOFTWARE, INC.

  STANDARD CMOS SETUP         INTEGRATED PERIPHERALS
  BIOS FEATURES SETUP         SUPERVISOR PASSWORD
  CHIPSET FEATURES SETUP      USER PASSWORD
  POWER MANAGEMENT SETUP      IDE HDD AUTO DETECTION
  PNP/PCI CONFIGURATION       SAVE & EXIT SETUP
  LOAD SETUP DEFAULTS         EXIT WITHOUT SAVING
  LOAD BIOS DEFAULTS

  Esc : Quit                  ↑ ↓ → ←  : Select Item
  F10 : Save & Exit Setup     (Shift) F2  : Change Color
                Time, Date, Hard Disk Type…
```

You are now ready to configure your system with the BIOS setup program. Go to Chapter 3: **BIOS SETUP**

Chapter 3

BIOS SETUP UTILITY

This mainboard's BIOS setup program uses the ROM PCI/ISA BIOS program from Award Software Inc.

To enter the Award BIOS program's Main Menu:

1. Turn on or reboot the system.

2. After the diagnostic checks, press the [Del] key to enter the Award BIOS Setup Utility.

ROM PCI/ISA BIOS CMOS SETUP UTILITY AWARD SOFTWARE, INC.	
STANDARD CMOS SETUP	INTEGRATED PERIPHERALS
BIOS FEATURES SETUP	SUPERVISOR PASSWORD
CHIPSET FEATURES SETUP	USER PASSWORD
POWER MANAGEMENT SETUP	IDE HDD AUTO DETECTION
PNP/PCI CONFIGURATION	SAVE & EXIT SETUP
LOAD SETUP DEFAULTS	EXIT WITHOUT SAVING
LOAD BIOS DEFAULTS	
Esc : Quit	↑↓→← : Select Item
F10 : Save & Exit Setup	(Shift) F2 : Change Color
Time, Date, Hard Disk Type…	

Selecting items

● Use the arrow keys to move between items and select fields.

● From the Main Menu press arrow keys to enter the selected submenu.

Modifying selected items

● Use the [Up]/[Down] keys to modify values within the selected fields. Some fields let you enter values directly.

Hot Keys: Function keys give you access to a group of commands throughout the BIOS utility.

Function	Command	Description
F1	Help	Gives the list of options available for each item.
Shift F2	Color	Change the color of the display window.
F5	Old values	Restore the old values. These are the values that the user started the current session with.
F6	Load BIOS Defaults	Loads all options with the BIOS Setup default values.
F7	Load Setup Defaults	Loads all options with the Power-On default values.
F10	Save & Exit Setup	Saves your changes and reboots the system.
[Esc]	Quit	Lets you return at anytime and from any location to the Main Menu.

SAVE AND EXIT SETUP

Select the [SAVE & EXIT SETUP] option from the Main Menu to save data to CMOS and exit the setup utility. This option saves all your changes and causes the system to reboot.
Type [Y] to save the changes and exit or [N] to return to the Main Menu and keep current values.

EXIT WITHOUT SAVING

Selecting the [EXIT WITHOUT SAVING] option allows you to abandon all data and exit setup, therefore ignoring all your changes.
Type [Y] to abandon changes and exit or [N] to return to the Main Menu and keep current values.

37

3-1 STANDARD CMOS SETUP

Select the [STANDARD CMOS SETUP] option from the Main Menu
and press [Enter] key.

ROM PCI/ISA BIOS
STANDARD CMOS SETUP
AWARD SOFTWARE, INC.

HARD DISKS	TYPE	SIZE	CYLS	HEAD	PRECOMP	LANDZ	SECTOR	MODE
Primary Master	: AUTO	0	0	0	0	0	0	AUTO

Secondary Master	: None	0	0	0	0	0	0	- - - -
Secondary Slave	: None	0	0	0	0	0	0	- - - -

Date (mm:dd:yy)   : Fri, May 29 1998
Time (hh:mm:ss)   : 9 : 42 : 43

Drive A : 1.44M, 3.5 in.
Drive B : None
Floppy 3 Mode Support : Disabled

Video   :   EGA/VGA
Halt On   :   All Errors

Base Memory: 640K
Extended Memory: 3328K
Other Memory: 128K

Total Memory: 4096K

Esc : Quit	↑↓→← : Select Item	PU/PD/+/- : Modify
F1 : Help	(Shift) F2 : Change Color	F3 : Toggle Calendar

This screen allows you to modify the basic CMOS settings.
After you have completed the changes, press [Esc] key to return to
the Main Menu.

3-1.1 Date & Time

	Display	**Setting**	**Please Note**
Date	mm/dd/yyyy	Type the current date	You can also the PUp/PDn keys to toggle
Time	hh:mm:ss	Type the current time	24-hour clock format 3:15 PM is displayed as 15:15:00

3-1.2 Hard Disks Type & Mode

Choose the type and mode for the hard disks that you have already installed.

Primary (Secondary) Master & Slave	Setting	Description	Note
Type	Auto	BIOS detects hard disk type automatically.	Default
	1-47	Selects standard hard disk type.	
	User	User defines the type of hard disk.	
Mode	Auto	BIOS detects hard disk mode automatically.	Default
	Normal	Normal IDE hard disk	<528MB
	LBA	Enhanced IDE hard disk	>528MB
	Large	Large IDE hard disk (for certain hard disk)	

> *Note:* If you have any questions on your hard disk type or mode, ask your hard disk provider or previous user for details.

3-1.3 Floppy Drives

Floppy Drives	Setting	Description	Note
Drives A & B	360KB, 5.25 in.		
	1.2MB, 5.25 in.		
	720KB, 3.5 in.		
	1.44MB, 3.5 in.		Default
	2.88MB, 3.5 in.		
	None	Not installed	
Floppy 3-Mode Support	Disabled		Default
	Drive A Drive B Both	Supports 3-mode floppy diskette: 740KB/1.25MB/1.44MB on selected disk drive.	Special disk drive commonly used in Japan

3-1.4 Video

Select the video mode: EGA/VGA (Default), CGA 40, CGA 80, Mono (Monochrome).

3-1.5 Halt On

When the BIOS detects system errors, this function will stop the system. Select which type of error will cause the system halt: All Errors (Default), No Errors, All But Diskette, All But Keyboard, All But Disk/Key.

3-2 BIOS FEATURES SETUP

Select the [BIOS FEATURES SETUP] option from the Main Menu
and press [Enter] key.

```
                         ROM PCI/ISA BIOS
                       BIOS FEATURES SETUP
                       AWARD SOFTWARE, INC.

Virus Warning                : Disabled    Video    BIOS Shadow   : Enabled

IDE Second Channel Control   : Enable      F5   : Old Values  (Shift) F2 : Color
PCI/VGA Palette Snoop        : Disabled    F6   : Load BIOS Defaults
OS Select For DRAM > 64MB    : Non-OS2     F7   : Load Setup Defaults
Report No FDD For WIN 95     : No
```

After you have completed the changes, press [Esc] key and follow
the instructions on your screen to save your settings or exit without
saving.

3-2.1 Virus Warning

	Setting	Description	Note
Virus Warning	Disabled		Default
	Enabled	Enable this option to protect the boot sectors and partition tables of your hard disk. Any attempt to write to them will the system to halt and display a warning message.	

3-2.2 Cache Memory Options

	Setting	Description	Note
CPU Internal Cache	Disabled		
	Enabled	Enables the CPU's internal cache.	Default
External Cache	Disabled		
	Enabled	Enables the external memory.	Default

3-2.3 System Boot Control Settings

System Boot Control Settings	Setting	Description	Note
Quick Power On Self Test	Disabled		
	Enabled	Provides a fast POTS at boot-up.	Default
Boot Sequence	A, C, SCSI	Choose the boot sequence adapted to your needs, for example: ● [A, C, SCSI] means the BIOS will look for an operating system first in drive A, then in drive C, and eventually in SCSI device.	
	C, A, SCSI		
	C, CD-ROM, A		
	CD-ROM, C, A		
	D, A, SCSI		
	E, A, SCSI		
	F, A, SCSI		
	SCSI, A, C		
	SCSI, C, A		
	C only		
	LS/ZIP, C		
Swap Floppy Drive	Disabled		Default
	Enabled	Changes the sequence of A and B drives.	
Boot Up NumLock Status	On	Puts numeric keypad in NumLock mode at boot-up.	Default
	Off	Puts numeric keypad in arrow key mode at boot-up.	

43

System Boot Control Settings (continued)

System Boot Control Settings	Setting	Description	Note
Gate A20 Option	Normal		
	Fast	Allows RAM access above 1MB using the fast gate A20 line.	Default
Memory Parity Check/ ECC Check	Enabled	This allows to perform a redundancy check on the parity bit in the data strings. This method is used for error detection when the parity is not found.	Default
	Disabled		

3-2.4 Typematic Settings

Typematic Settings	Setting	Description	Note
Typematic Rate Setting	Disabled		Default
	Enabled	Enables to adjust the keystroke repeat rate.	
The following [Typematic Rate] and [Typematic Delay] fields are active only if [Typematic Rate Setting] is set to [Enabled]			
Typematic Rate (Chars/Sec)	6 (Char/sec) 8 (Char/sec) 10 (Char/sec) 12 (Char/sec) 15 (Char/sec) 20 (Char/sec) 24 (Char/sec) 30 (Char/sec)	Choose the rate at which a character is repeated when holding down a key.	Default
Typematic Delay (Msec)	250 (msec) 500 (msec) 750 (msec) 1000 (msec)	Choose how long after you press a key down the character begins repeating.	Default

3-2.5 Other Control Options

Other Control Options	Setting	Description	Note
Security Option	Setup	Use this feature to prevent Unauthorized system boot-up or use of BIOS Setup. "Setup", If a password is set, the password prompt only appears if you attempt to enter the Setup program.	Default
	System	Each time the system is booted the password prompt appears.	
IDE Second Channel Control	Disabled	Turn off the on-board IDE.	
	Enabled	Use a PS/2 mouse.	Default
PCI/VGA Palette Snoop	Disabled		Default
	Enabled		
	The color of the monitor may be altered when using an MPEG card. Enable this option to restore the monitor's normal color.		
OS Select for DRAM>64MB	OS2	When using an OS2 operating system.	
	Non-OS2	When using another, non-OS2 operating system.	Default
Report No FDD For WIN 95	No	Windows will reserve INT 6 for your FDD, whether it is Disabled or not.	Default
	Yes	Windows will release IRQ line 6 (normally used by the Floppy Disk Drive) after you disable you on-board FDD and set this field to [Yes].	

Other Control Options (Continued)

Other Control Options	Setting	Description	Note
Video or Adapter BIOS Shadow	Disabled		
	Enabled		Default
	The BIOS is shadowed in a 16K segment if it is enabled and if it has BIOS present. These 16 segments can be shadowed from ROM to RAM. BIOS shadow copies BIOS code from slower ROM to faster RAM. BIOS can then execute from RAM.		

3-3 CHIPSET FEATURES SETUP

STOP *Caution:* Change these settings only if you are already familiar with the Chipset.

The [CHIPSET FEATURES SETUP] option changes the values of the chipset registers. These registers control the system options in the computer.

```
                        ROM PCI/ISA BIOS
                     CHIPSET FEATURES SETUP
                       AWARD SOFTWARE, INC.
 DIMM1 DRAM Timing        : FP/EDO/60ns  CPU Warning Temperature  : Enabled

 Spread Spectrum Modulated : Disabled   F6   : Load BIOS Defaults
                                        F7   : Load Setup Defaults
```

After you have completed the changes, press [Esc] and follow the instructions on your screen to save your settings or exit without saving.
The following table describes each field in the CHIPSET FEATURES SETUP Menu and how to configure each parameter.

47

CHIPSET FEATURES SETUP

CHIPSET FEATURES	Setting	Description	Note
DIMM1 DRAM Timing	FP/EDO 70ns	Use the default setting	Default
DIMM2 DRAM Timing **SIMM 1,2 DRAM Timing**	Normal Medium Fast, Turbo	Choose DRAM Timing.	
DRAM Read Pipeline	Disabled		
	Enabled	Enhances system performance	Default
Cache Rd+CPU Wt Pipeline	Disabled		
	Enabled	Enhances system performance	Default
Cache Timing	Fast	Enhances system performance	Default
	Fastest		
Linear Burst	Disabled	Use the default setting	Default
	Enabled	Linear mode SRAM support for Cyrix type of CPU.	
Video BIOS Cacheable	Disabled		
	Enabled	The ROM area A0000-BFFFF is cacheable.	Default
System BIOS Cacheable	Disabled		
	Enabled	The ROM area F0000H-FFFFFH is cacheable	Default
Memory Hole 15Mb Addr.	Disabled	Some interface cards will map their ROM address to this area.	Default
	Enabled		

48

CHIPSET FEATURES SETUP (Continued)

CHIPSET FEATURES	Setting	Description	Note
AGP Aperture Size	64M 4-256M	AGP could use the DRAM as its video RAM. Choose the JDRAM size that you wish to allocate as video RAM.	Default
AGP-2X Mode	Disabled		Default
	Enabled	Enable only if your AGP card supports 2x mode (faster)	
OnChip USB	Disabled		
	Enabled	Enable if you use a separate USB controller card	Default
USB Keyboard Support	Disabled		Default
	Enabled	Enabled if you use an USB Keyboard.	
Spread Spectrum Modulated	Disabled	Use the default setting	Default
	Enabled	When using Spread Spectrum Modulated 1.5% or 6% for FCC or DOC testing.	
CPU Warning Temperature	Disabled	Use the default setting	Default
	Enabled	Set CPU temperature from 50°C to 70°C. The CPU will slow down when CPU temperature goes beyond the preset value. The CPU will continue to run slow until the temperature returns back within the safe range.	
Current System Temp.	°C/°F	Show the current status of the system temperature.

DMA/ master	: OFF	ESC : Quit	↑↓→← : Select Item
Modem Ring Resume	: Disabled	F1 : Help	PU/PD/+/- : Modify
RTC Alarm Resume	: Disabled	F5 : Old Values	(Shift) F2 : Color
		F6 : Load BIOS Defaults	
		F7 : Load Setup Defaults	

After you have completed the Power Management Setup, press
[Esc] to return to the Main Menu.

3-4.1 Power Management Controls

Power Management Controls	Setting	Description		Note
ACPI function	Disabled			Default
	Enabled	Enabled if you use Windows 98 and want to use ACPI		
Power Management	User Define	Lets you define the HDD and system power down times.		
		Doze timer	Standby timer	Suspend timer
	Min Saving	40 Min	40 Min	40 Min
	Max Saving	20 Sec	20 Sec	20 Sec
PM Control by APM	Yes	To use Advanced Power Management (APM) you must run [power.exe] under DOS V6.0 or later version.		Default
	No			
Video Off Option	Suspend ->Off	The monitor will be switched off in suspend mode,		Default
	All Modes ->Off	the monitor will be switched off in all power saving		
	Always On	modes		
Video Off Method	V/H SYNC+Blank	Selects the method by which the monitor is blanked.		Default
	Blank screen			
	DPMS Supported			
Modem Use IRQ	3	Assigns an IRQ# to the modem device.		Default
	3-11, NA			
Soft-Off by PWRBTN	Instant - Off	Select the Power Button Mode.		Default
	Delay 4 Sec	Instant – Off : One push off. Delay 4 Sec : Push for 4s to switch off.		

3-4.2   PM Timers

PM Timers	Setting	Description	Note
HDD Power Down	Disable		Default
	1-15Min	When the set time has elapsed, BIOS sends a command to the HDD to power down. This turns off the HDD motor.	Some older model HDDs may not support this advanced function.

The following [Doze Mode] field may be configured only if [Power Management] is set to [User Define]

Doze Mode	Disable		Default
	10sec-1Hour	When the set time has elapsed, BIOS sends a command to the system to enter Doze Mode.	System clock drops to 33MHz.

The following [Suspend Mode] field may be configured only if [Power Management] is set to [User Define]

Suspend Mode	Disable		Default
	10sec-1Hour	In Suspend mode, the CPU stops completely (no instructions are executed.)	Only an SL-Enhanced (or SMI) CPU can enter this mode.

53

3-4.3 PM Events

PM Events	Setting	Description	Note
VGA	ON	Enabled the power managemnet.	
	OFF		Default
LPT & COM	LPT/COM	Enabled the power management timer.	Default
	COM LPT NONE		
HDD & FDD	ON	Enabled the power management timers when the event is detected on the Hard Disk Drive and Floppy Disk Drive device.	Default
	OFF		
DMA/master	ON	The system will not have SIM signal until the master is finished while the master is working.	
	OFF		Default
Modem Ring Resume	Disabled	Only work when the computer is powered on. The system will resume active when modem is ringing.	Default
	Enabled	The system will not resume when modem is ringing.	
RTC Alarm Resume	Disabled	The system ignores the alarm.	Default
	Enabled	Set alarm to wake up the system either by the date (1-31) or time (hh:mm:ss), and if the date is set to 0, it means that the system will wake up by the alarm everyday.	
Primary INTR	ON	Use the default setting.	Default
	OFF		

PM Events (Continued)

PM Events	Setting	Description	Note
IRQ#	Primary	IRQ3(COM2), IRQ4(COM1), IRQ5(LPT2), IRQ6(Floppy Disk), IRQ7(LPT1), IRQ12(PS/2 mouse), IRQ13(Coprocessor), IRQ14(HardDsik)	
	Secondary	IRQ9(IRQ2 Redir), IRQ10(Reserved), IRQ11(Reserved)	
	Disabled	IRQ8 (RTC Alarm), IRQ15 (Reserved)	

3-5 PNP/PCI CONFIGURATION SETUP

This option sets the mainboard's PCI Slots.

```
                          ROM PCI/ISA BIOS
                    PNP/PCI CONFIGURATION SETUP
                       AWARD SOFTWARE, INC.

PNP OS Installed         : No          CPU to PCI Write Buffer  : Enabled
Resources Controlled By  : Manual      PCI Master Broken Timer  : Disabled
ACPI I/O Device Node      : Disabled    PCI IRQ Actived By       : Level
IRQ-3   assigned to      : Legacy ISA  Assign IRQ For USB       : Enabled
IRQ-4   assigned to      : Legacy ISA  Assign IRQ For VGA       : Enabled
IRQ-5   assigned to      : PCI/ISA PnP Assign IRQ For ACPI      : IRQ10
IRQ-7   assigned to      : PCI/ISA PnP
IRQ-9   assigned to      : PCI/ISA PnP
IRQ-10 assigned to       : PCI/ISA PnP
IRQ-11 assigned to       : PCI/ISA PnP
IRQ-12 assigned to       : PCI/ISA PnP
IRQ-14 assigned to       : PCI/ISA PnP
IRQ-15 assigned to       : PCI/ISA PnP
DMA-0 assigned to        : PCI/ISA PnP
DMA-1 assigned to        : PCI/ISA PnP  ESC  : Quit         ↑↓→←   : Select Item
DMA-3 assigned to        : PCI/ISA PnP  F1   : Help         PU/PD/+/- : Modify
DMA-5 assigned to        : PCI/ISA PnP  F5   : Old Values   (Shift) F2  : Color
DMA-6 assigned to        : PCI/ISA PnP  F6   : Load BIOS Defaults
DMA-7 assigned to        : PCI/ISA PnP  F7   : Load Setup Defaults
```

Note: Starred (*) items will disappear when the [Resources Controlled By] option is set to [Auto].

After you have completed the PCI Slot Configuration, press [Esc] and follow the instructions on your screen to save your settings or exit without saving.

3-5.1 PNP/PCI Configuration Controls

PNP/PCI Controls	Setting	Description	Note
PNP OS Installed	Yes	Use the default setting	Disabled
	NO		
Resources Controlled By	Manual	BIOS does not manage PCI/ISA PnP card IRQ assignment.	
		Requires to assign IRQ-# and DMA-# to PCI or ISA PnP manually. IRQ-3,4,5,7,9,10,11,12,14,15 assigned to: _ DMA-0,1,3,5,6,7 assigned to: _	
	Auto	The Plug-and-Play BIOS auto manages PCI/ISA PnP card IRQ assignment automatically.	**Recommended**
Reset Configuration Data	Disabled	Retain PnP configuration data in BIOS.	Default
	Enabled	Reset PnP configuration data in BIOS.	
ACPI I/O Device Node	Disabled	Use the default setting	Default
	Enabled		

57

3-5.2 PNP/PCI Configuration Setup

PNP/PCI Setup	Setting	Description	Note
If [Resources Controlled By] is set to [Manual]			
IRQ-# and DMA-# assigned to:	PCI/ISA PnP	Choose IRQ-# and DMA-# assigned to PCI/ISA PnP card.	IRQ-3,4,5,7,9,10, 11,12,14,15 DMA-0,1,3,5,6,7
	Legacy ISA	Choose IRQ-# and DMA-# assigned to Legacy ISA card.	IRQ-3,4,5,7,9,10, 11,12,14,15 DMA-0,1,3,5,6,7
CPU to PCI write Buffer	Disabled		
	Enabled	Enable buffering of CPU writes to the PCI bus, the CPU will not have to wait.	Default
PCI Master Broken Timer	Disabled		Default
	Enabled	Enable to allow for slow PCI masters.	
Assign IRQ For USB	Disabled		
	Enabled	Enable RSB IRQ	Default
Assign IRQ For VGA	Disabled		
	Enabled	Enable if your VGA card needs an interrupt.	Default
Assign IRQ For ACPI	IRQ10 IRQ11 IRQ9	If you enable ACPI on your system, set this item to a free interrupt for ACPI to use.	**Default**

3-6 LOAD SETUP DEFAULTS

Select the [LOAD SETUP DEFAULTS] option from the Main Menu to load the system values you have previously saved. This option is recommended if you need to reset the system setup and to retrieve the old values.
```
                    ROM PCI/ISA BIOS
                   CMOS SETUP UTILITY
                  AWARD SOFTWARE, INC.
  STANDARD CMOS SETUP          INTEGRATED PERIPHERALS
  BIOS FEATURES SETUP          SUPERVISOR PASSWORD
  C
  P     Load SETUP Defaults (Y/N)? _
  P
  L
  LOAD BIOS DEFAULTS

  Esc : Quit                  ↑ ↓ → ←   : Select Item
  F10 : Save & Exit Setup     (Shift) F2 : Change Color
                   Time, Date, Hard Disk Type…
```

Type [Y] to use the Setup Defaults followed by [Enter] or otherwise [N] to return to the Main Menu and keep current values.

3-7 LOAD BIOS DEFAULTS

Select the [LOAD BIOS DEFAULTS] option from the Main Menu to load the system default values. BIOS Defaults values are adjusted to yield high performance.
```
                    ROM PCI/ISA BIOS
                   CMOS SETUP UTILITY
                  AWARD SOFTWARE, INC.
  STANDARD CMOS SETUP          INTEGRATED PERIPHERALS
  BIOS FEATURES SETUP          SUPERVISOR PASSWORD
  C
  P     Load BIOS Defaults (Y/N)? _
  P
  L
  LOAD BIOS DEFAULTS

  Esc : Quit                  ↑ ↓ → ←   : Select Item
  F10 : Save & Exit Setup     (Shift) F2 : Change Color
                   Time, Date, Hard Disk Type…
```

Type [Y] to use the Setup Defaults followed by [Enter] or otherwise [N] to return to the Main Menu and keep current values.

> **🛑 STOP**
>
> ***Warning:*** If you run into any problems after loading BIOS DEFAULTS, please load the SETUP DEFAULTS for stable performance.

59

3-8 INTEGRATED PERIPHERALS

STOP *Caution:* Change these settings only if you are already familiar with the Chipset.

The [INTEGRATED PERIPHERALS] option changes the values of the chipset registers. These registers control the system options in the computer.

The following screen shows default settings.

```
                        ROM PCI/ISA BIOS
                    INTEGRATED PERIPHERALS
                    AWARD SOFTWARE, INC.

 OnChip IDE First Channel    : Enabled   Onboard Parallel Port    : 378
 OnChip IDE Second Channel   : Enabled   Parallel Port Mode       : Normal
 IDE Prefetch Mode           : Enabled   ECP Mode Use DMA         : 3
 IDE HDD Block Mode          : Enabled   Parallel Port EPP Type   : EPP1.9
 IDE Primary Master PIO      : Auto
 IDE Primary Slave PIO       : Auto
 IDE Secondary Master PIO    : Auto
 IDE Secondary Slave PIO     : Auto
 IDE Primary Master UDMA     : Auto
 IDE Primary Slave UDMA      : Auto
 IDE Secondary Master UDMA   : Auto
 IDE Secondary Slave UDMA    : Auto
 Init Display First          : PCI Slot  ESC  : Quit       ↑↓→←  : Select Item
                                         F1   : Help       PU/PD/+/- : Modify
 Onboard FDC Controller      : Enabled   F5   : Old Values (Shift) F2  : Color
 Onboard UART 1              : 3F8/IRQ4  F6   : Load BIOS Defaults
 Onboard UART 2              : 2F8/IRQ3  F7   : Load Setup Defaults
 Onboard UART 2 Mode         : Standard
```

The following tables describe each field in the INTEGRATED PERIPHERALS Menu and provide instructions on how to configure the IDE controls, FDC controls, and the onboard serial and parallel ports.

3-8.1 IDE Device Controls

IDE Controls	Setting	Description	Note
Onchip IDE Primary Channel	Disabled	Use the On-board IDE Channel	
	Enabled		Default
Onchip IDE Second Channel	Disabled	Turn off the On-board IDE Channel	
	Enabled		Default
IDE Prefetch Mode	Disabled		
	Enabled	Enable to enhance system performance.	Default
IDE HDD Block Mode	Disabled		
	Enabled	Invokes multi-sector transfer instead of one sector per transfer. Not all HDDs support this function.	Default
The following fields may be configured only if [Internal PCI/IDE] is set to [Both], [Primary], or [Secondary].			
IDE ➢ **Primary Master PIO** ➢ **Primary Slave PIO** ➢ **Secondary Master PIO** ➢ **Secondary Slave PIO**	Mode 0-4	0 is the slowest speed 4 is the fastest speed	
	Auto	For better performance and stability, we suggest you use the Auto setting to set the HDD control timing.	Default
IDE ➢**Primary Master UDMA** ➢**Primary Slave UDMA** ➢**Secondary Master UDMA** ➢**Secondary Slave UDMA**	Disabled		
	Auto	Select Auto to enable Ultra DMA Mode support.	Default
The following field may be configured only if [Internal PCI/IDE] is set to [Both], [Primary], or [Secondary].			
Init Display First	PCI Slot	Select the VGA card that connects to the primary monitor.	Default
	AGP		

3-8.2 FDC Controls

FDC Controls	Setting	Description	Note
Onboard FDC controller	Disabled	Turn off the on-board floppy controller	
	Enabled	Use the on-board floppy controller	Default

3-8.3 Onboard Serial Ports

Onboard Serial Ports	Setting	Description	Note
Onboard UART 1	Disabled		
Onboard UART 2	3F8/IRQ4	Choose serial port 1 & 2's I/O address.	Default (port 1)
	2F8/IRQ3	Do not set port 1 & 2 to the same address	Default (port 2)
	3E8/IRQ4	except for Disabled or	
	2E8/IRQ3	Auto.	
	Auto		
Onboard UART 2 Mode	Standard	Supports a serial infrared IrDA.	Default
	HPSIR	Supports HP serial infrared interface format.	
	ASKIR	Supports a Sharp serial interface format.	

3-8.4 Onboard Parallel Ports

IR Pins Controls	Setting	Description	Note
IR Duplex mode	Half	Select the IR mode	Default
	Full	your IR module	
		supports	
Use IR Pins	IR-RX2TX2		Default
	IR-RX TX		

3-8.5 Onboard Parallel Ports

Onboard Parallel Ports	Setting	Description	Note
Onboard Parallel Port	378	Choose the printer I/O address.	Default
	Disabled		
	3BC		
	278		
Parallel Port Mode	ECP + EPP	The mode depends on your external device that connects to this port.	
	Normal		Default
	EPP		
	ECP		
If [Parallel Port Mode] is set to [ECP] or [ECP+EPP].			
ECP Mode Use DMA	3	Choose DMA3	Default
	1	Choose DMA1	
If [Parallel Port Mode] is set to [EPP] or [ECP+EPP].			
Parallel Port EPP Type (EPP Version)	EPP1.9	Choose EPP Ver. 1.9	Default
	EPP1.7	Choose EPP Ver. 1.7	

3-9   SUPERVISOR PASSWORD

Based on the setting you have made in the [Security Option] of the [BIOS FEATURES SETUP] section, the password prevents access to the system or the setup program by unauthorized users. Follow this procedure to set a new password or disable the password:

1.   Choose [BIOS FEATURES SETUP] in the Main Menu and press [Enter]. Select the [Security Options] item and set the field to:
     a.   [System]: The password is required every time the system is booted. This means only a person who knows the password can use this computer.
     b.   [Setup]: The password is required only when you attempt to enter the BIOS Setup program.

2.   Choose [SUPERVISOR PASSWORD] from the Main Menu and press [Enter]. The following prompt appear:

> Enter Password:

Warning: If you forget or lose the password, the only way to access the system is to set jumper JP5 to clear the CMOS RAM. All setup information is lost and you must run the BIOS setup program again.

Note: If you do not wish to use the password function, press [Enter] directly and the following message appears:
> Password Disabled!!

3.   Enter your new password and press [Enter]. The following
      message appears, prompting to confirm the new password:

> Confirm Password:

4.   Re-enter your password and then press [Enter] to exit to the
      Main Menu.

This diagram outlines the password selection procedure:

Type the Password and Press: <Enter>

ROM PCI/ISA BIOS
CMOS SETUP UTILITY
AWARD SOFTWARE

Press <Enter> without entering the password

STANDARD CMOS ... RIPHERALS
BIOS FEATURES ... PASSWORD

Enter Password:

Enter Password: ＊＊＊＊＊

Confirm Password: ＊＊＊＊＊

Password Disabled!!

SAVE & EXIT SETUP
EXIT WITHOUT SAVING

After you confirm the password, press <Esc> to exit

Esc : Quit
F10 : Save & Exit Se...   ...lor

Time, Date, Hard Disk Type...

3-10 USER PASSWORD

When the user password option is on, you are not allowed to change
any setting in the [CMOS SETUP UTILITY] except for changing the
user's password.

The password setting procedure is similar to that for the
[SUPERVISOR PASSWORD] (Refer to section 3-9).

3-11 IDE HDD AUTO DETECTION

This Main Menu function automatically detects the hard disk type
and configures the STANDARD CMOS SETUP accordingly.

```
                          ROM PCI/ISA BIOS
                         CMOS SETUP UTILITY
                       AWARD SOFTWARE, INC.
```

HARD DISKS	TYPE	SIZE	CYLS	HEAD	PRECOMP	LANDZ	SECTOR	MODE
Primary Master	: AUTO	0	0	0	0	0	0	AUTO
Primary Slave	: None	0	0	0	0	0	0	- - - -
Secondary Master	: None	0	0	0	0	0	0	- - - -
Secondary Slave	: None	0	0	0	0	0	0	- - - -

Do you accept this drive C (Y/N)? _

ESC : Skip

Note: This function is only valid for IDE type of hard disk drives.

Chapter 4

DRIVERS INSTALLATION

Your SY-5EMM Super 7 ™Mainboard comes with a CD-ROM
labeled "SOYO CD." The SOYO CD contains the user's manual file
for your new Mainboard, the drivers software available for
installation, and a database in HTML format with information on
SOYO Mainboards and other products.

Step 1. Insert the SOYO CD into the CD-ROM drive
The SOYO CD will auto-run, and the SOYO CD Start Up Menu will
display as shown below.
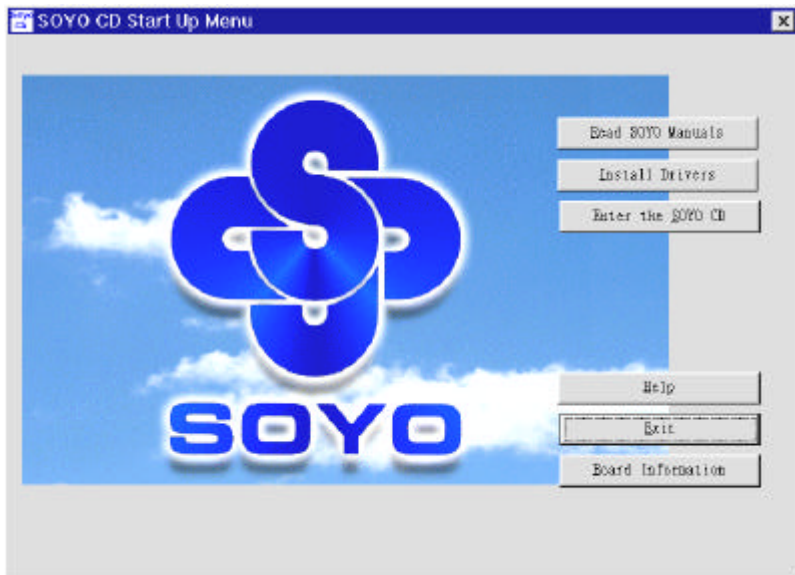

(SOYO CD Start Up Program Menu)

The SOYO CD Start Up Program automatically detects which SOYO
Mainboard you own and displays the corresponding model name.

67

Step 2. Installation procedure for Windows 95/98

The following describes the best way of installing Windows 95 or Windows 98 on your 5EMM mainboard:

➢   The following BIOS default settings should not be changed:
1. The 'USB Controller' item under 'Chipset features' is set to enabled.
2. The 'USB Assigned IRQ' item under 'PnP/PCI Configuration is set to enabled.

You MUST have these two items enabled for Windows 95/98 to run properly on your system.

➢   Install Windows 95/98
➢   After installation of windows, you will need to install the ETEQ drivers. Follow the instruction below.

Click the ***Install Drivers*** button to display the list of drivers that can be installed on your mainboard. The start-up program displays the drivers available for the 5EMM and the Windows version you use. For Windows 95 four drivers will be listed (see 'Driver Installation Menu' below), for Windows 98 three drivers will be listed (the ACPI drivers will be left out). We recommend you to install all drivers, and to do so in the right sequence (top to bottom).

If you want to see all the drivers available on the SOYO –CD, click the ***Display all drivers on the SOYO CD*** button. Do NOT install drivers that are not suitable for you board, otherwise your system may crash.
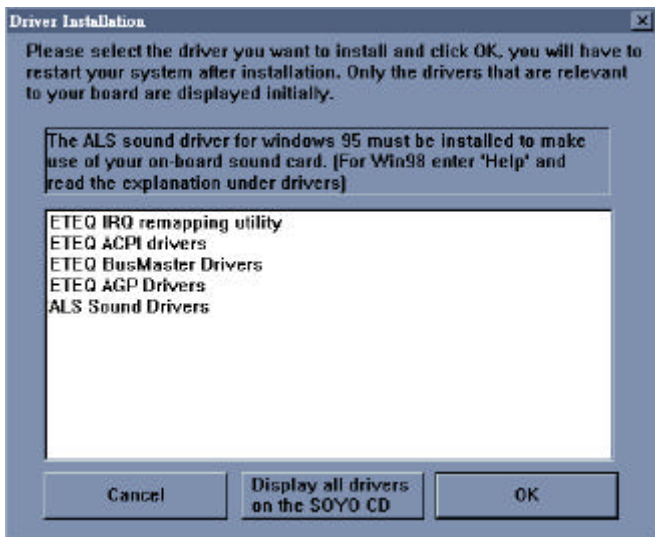

(Driver Installation Menu)

Select which driver you want to install and click *OK,* or click *Cancel* to return to the main menu. When the installation program of a driver starts running the SOYO-CD will exit. After finishing the installation, restart the SOYO-CD and install the next driver.

Note: Once you have selected a driver, the system will automatically exit the SOYO CD to begin the driver installation program. When the installation is complete, most drivers require to restart your system before they can become active.

Chapter 5

ALS120 AUDIO DRIVER INSTALLATION

This section describes how to install the ALS120 audio driver and application program. Your mainboard comes with a ALS120 installation CD-ROM. The "CD Title Disk" contains the following applications programs:

- Windows 3.1
- DOS Utility (DOSINST.EXE)
- Windows 95/98
- Windows NT 3.5/4.0
- Setup Utility Program (A3CONFIG.EXE)

5-1 Windows 3.1

Follow these steps to perform the ALS120 audio driver installation in Windows 3.1 environment:

1. Start Windows 3.1.
2. Insert the "CD Title Disk" into diskette drive D (CD-ROM).
3. Select [Run] from the Program Manager File menu and type **D:\drivers\ALS_aud\setup** on the command line.
4. A Welcome dialog box will appear. Click [Next] to continue the installation.
5. A Choose Destination Location dialog box will appear. Click [Next] in the Choose Destination dialog box to install the ALS120 sound driver to the default directory or click on [Browse] if you want to install to a different directory.
6. Setup will automatically create a folder and icons for the sound application.
7. A Modifying AUTOEXEC.BAT dialog box will appear. Click on [Next] to accept the default and "Let Setup modify the AUTOEXEC.BAT file".
8. A Configuration Panel dialog box will appear for the first time installation and please check each hardware settings and make changes according to hardware installed and also if you do not hear music at tests.
9. Click on [Finish]. Setup will configure the hardware settings. Refer to the "Setup Utility Program" in a next chapter to configure your sound card.

5-2 DOS Utility (DOSINST.EXE)

You can also install the ALS120 audio driver by running the DOSINST.EXE application program in DOS environment:

1.   Insert the CD Title Disk into diskette drive D (CD-ROM).

2.   If Windows 3.1/95 is running, exit the application.

3.   At the C:\> prompt, type **d:** (CD-ROM) and press the <Enter> key.

4.   At the D:\drivers\ALS_aud\> prompt, type **DOSINST.EXE** and press the <Enter> key.

5.   The Avance Sound Chip Installation Program screen will be displayed showing the following defaults:

      Avance software copy to: C:\A3SOUND

      System bootup drive: C:\

- To make changes to the defaults, select the parameter with the Up/Down Arrow keys and press the <Enter> key. Then change the parameter and press the <Enter> key again to accept the changes.

- When satisfied with the new parameters or to accept the defaults, select "accept the above" with the Up/Down Arrow keys and press the <Enter> key.

6.   The installation of the Avance Logic software drivers will now begin.

7.   When all of the files are copied to the fixed disk, installation program will automatically update the AUTOEXEC.BAT, saving copies of the original files with the extension ".ALS", and the A3CONFIG.EXE utility will automatically start. Use the instructions given in "Setup Utility Program" in a next section to set up the ALS120 sound card.

5-3 Windows 95/98

➢ **After first installing Windows95 , follow these steps:**

1. Click [Start] menu and select [Control Panel] from [Settings] group.
2. Select [System] icon.
3. Select [Device Manager] , if the following entries exist, delete them: [PnP Sound Chip] or [Creative Labs sound Blaster 16 or AWE32] ,and [Gameport Joystick] ,and [MPU-401 Compatible].
4. Restart the computer.
5. Place CD-ROM disk into the CD driver.
6. When the "Update Device Driver Wizard" comes up, Click [Next].
7. Click the [Other] Button from "Insert Disk".
8. Click the [Browse] from "Copying Files".
9. Select "D:\drivers\ALS_AUD" directory, and click [OK].
10. Windows95 will automatically copy all of the needed files and configure the ALS sound card.

➢ **After first installing Windows98 , follow these steps:**

1. Click [Start] menu and select [Control Panel] from [Settings] group.
2. Select [System] icon.
3. Select [Device Manager], Remove all [PnP Sound Chip] under [Other devices].
4. Restart the computer.
5. Place CD-ROM disk into the CD driver.
6. When the "Add New Hardware Wizard" comes up, Click [Next] .
7. Select "Display a list of all the drivers ..." Click [Next].
8. Select "Sound, video and game controllers" Click [Next].
9. Click [Have Disk] button.
10. Click [Browse] button.
11. Select "D:\drivers\ALS_AUD" directory and Click [OK].

12. Click [Finish] Button.
13. Windows98 will automatically copy all of the needed files and configure the ALS sound card.

5-4 Windows NT 3.5/4.0

1.   Ensure that ALS120 is installed properly and power on the
      system.
2.   Insert the 'CD Title Disk' into drive D (CD-ROM). Go to [Control
      Panel/Multimedia/Device/Add] and choose [OK] for 'Avance
      Logic, Inc. Sound Chip'.
3.   While installing, "Driver Exists" warning message will appear
      and ask whether to keep the old 'midimap.cfg' or [re-install].
      Please select [re-install], otherwise MIDI will not function
      properly.
4.   Configure the proper I/O's and DMA's if necessary as they
      appear on screen.

5-5 Setup Utility Program

A3CONFIG.EXE

This utility program is used to set up the ALS120 sound card. It is
automatically started when the Avance Logic software drivers are
first installed in a DOS or Windows 3.1 application. It should be re-
run anytime the system hardware configuration is changed or a
change to the ALS120 sound card configuration is desired. The
A3CONFIG.EXE utility resides in the directory into which the Avance
Logic software drivers were stored.

Configuration

To run the A3CONFIG.EXE, perform the following:

1.   If Windows 3.1 is running, exit the application and at the C:\>
      prompt, set the current directory to the directory containing the
      A3CONFIG.EXE utility (A3SOUND was the default directory at
      the time of installation), type **A3CONFIG.EXE**, and then press
      the <Enter> key to execute the utility.

2.   The ALS120 Sound Chip Configuration Program screen will be displayed. Use the Tab, Space, Enter, Down Arrow, and ESC keys and/or the mouse to select and set options in menus, to move between menus, and to make and set changes to values.

3.   In the Sound Chip Configuration Program menu, the SB16 configuration screen showing the I/O port, DMA, and IRQ settings will be displayed, and the default settings are: I/O Port: 220, DMA1: 1, DMA2:3 and IRQ: 5. Select and set any changes or accept the defaults.

4.   In the Sound Chip Configuration Program menu, select **"MPU401"** to configure the external MIDI. The Enable/Disable box can be selected by using mouse or [space] key. If the external MIDI is enabled, the I/O port and IRQ settings will be displayed and can be changed by mouse control or [down arrow] key. The default settings are: I/O Port: 330 and IRQ: 9. Select and set any changes or accept the defaults.

5.   In the Sound Chip Configuration Program menu, select **"CD-ROM"** to configure the CD-ROM. The Enable/Disable box can be selected by using mouse or [space] key.

6.   In the Sound Chip Configuration Program menu, select **"ADLIB"** to configure the OPL3. The Enable/Disable box can be selected by using mouse or [space] key.

7.   In the Sound Chip Configuration Program menu, select **"Game Port"** to configure the game port. The Enable/Disable box can be selected by using mouse or [space] key.

8.   In the Sound Chip Configuration Program menu, select **"Set Volume"**. The Setting Volume screen will be displayed. Make and set any changes or accept the existing settings and return to the Main Menu.

9. In the Sound Chip Configuration Program menu, **8-Bit Sound/16-Bit Sound/FM Music** box will be displayed. Select each box and verify the correct operation of the ALS120 sound card. Follow the instructions given for each mode. If the sound card does not operate correctly in any mode, reconfigure it by re-running this procedure.

10. When satisfied with the operation of the ALS120 sound card, select [OK] to exit the utility.

5-6 Troubleshooting

The ALS120 sound card is designed to run trouble free once it is installed and set up. Most problems will be encountered during installation and setup or will be encountered later when something is changed in the system. The following are descriptions of and solutions for the more common problems that you may encounter. Please review these problems before requesting technical assistance.

Troubleshooting in DOS

Symptom	Possible Cause	Corrective Action
No sound when playing a DOS game	There may be a conflict in the SB16 settings.	Rerun the A3CONFIG.EXE utility and try another Port, DMA, or IRQ address.

Troubleshooting in Windows 3.1

Symptom	Possible Cause	Corrective Action
There is no "Sound" or "MIDI Sequencer" item in the Device pull-down menu in the Media Player or the alsrack.exe application does not work.	The MIDI software driver may not be loaded. Check the system.ini file for the following lines. If any are missing, perform the steps outlined in the Solution. If all are present, call for technical assistance.	Run the A3CONFIG.EXE utility in its entirety.
